

ROSPATENT
ANNUAL REPORT
2019

Rospatent Annual Report 2019

Welcoming address	
Head of Rospatent Grigory Ivliev	4

1 ACTIVITIES OF ROSPATENT in the sphere of legal protection of objects for IP rights protection: provision of public services and examination of appeals and applications	7
Introduction	8
1.1. Legal and methodological support of the provision of public services	9
1.2. State registration of trademark, service mark, collective mark	11
1.3. State registration of inventions, utility models	12
1.4. State registration of industrial designs	13
1.5. State registration of appellations of origin and grant of exclusive rights to such appellations, as well as grant of exclusive rights to appellations of origin registered earlier	14
1.6. State registration of computer programs, databases, topographies of integrated circuits	16
1.7. State registration of contracted disposition of exclusive right to the objects of intellectual property and transfer of exclusive right without a contract	18
1.8. Amendments to the state registers, renewal, cessation, restoration of legal protection of objects of intellectual property, open licenses, publication of court decisions	23
1.9. Provision of public services in electronic form	26
1.10. Certification and registration of patent attorneys of the Russian Federation	28
1.11. Consideration of administrative disputes related to legal protection of the results of intellectual activity and means of individualization	32

2 ACTIVITIES OF ROSPATENT on control and supervision in the sphere of legal protection and utilization of the results of intellectual activity of civil, military and dual use created with the federal budget funding and in the sphere of legal protection of the State interests in the course of economic and civil turnover of the R&D results of military, special and dual use	35
Introduction	36
2.1. Control and supervision in the sphere of legal protection and utilization of the results of intellectual activity of civil, military and dual use created with the federal budget funding	37
2.2. Legal protection of the State interests in the course of economic and civil law turnover of the R&D results of military, special and dual use	41
3 INTERACTION OF ROSPATENT with the federal executive, judicial and other authorities; interaction of Rospatent with the regions of the Russian Federation	45
Introduction	46
3.1. Interaction of Rospatent with the federal executive authorities.	47
3.2. Interaction of Rospatent with judicial authorities	47
3.3. Cooperation and Interaction of Rospatent with the regions of the Russian Federation	48
3.4. Consideration of requests from citizens and legal entities in Rospatent and its subordinate organizations	52
3.5. Statistics of reviewing citizens' requests for consultations	52

4	INTERNATIONAL COOPERATION	55
	Introduction	56
4.1.	World Intellectual Property Organization (WIPO)	57
4.2.	Rospatent activities to fulfill international obligations of the Russian Federation arising from its participation in the Patent Cooperation Treaty (PCT)	58
4.3.	Rospatent activities to fulfill international obligations of the Russian Federation arising from its participation in the Madrid Agreement Concerning the International Registration of Trademarks and the Protocol Relating to the Madrid Agreement	59
4.4.	Rospatent activities to fulfill international obligations of the Russian Federation arising from its participation in the Hague System for the International Registration of Industrial Designs	60
4.5.	Participation in WIPO Patent Information Classifications (IPC) Bodies	60
4.6.	The World Trade Organization (WTO)	61
4.7.	BRICS	61
4.8.	Asia-Pacific Economic Cooperation Forum (APEC)	62
4.9.	European Patent Office (EPO)	62
4.10.	European Union Intellectual Property Office (EUIPO)	62
4.11.	Commonwealth of Independent States (CIS)	62
4.12.	Eurasian Patent Organization (EAPO)	63
4.13.	Eurasian Economic Union (EAEU)	63
4.14.	Bilateral cooperation	63
4.15.	Participation of Rospatent in Patent Prosecution Highway program (PPH)	65
5	DIGITAL ROSPATENT	67
	Introduction	68
5.1.	Rospatent's participation in the implementation of the national program "Digital Economy of the Russian Federation"	69
5.2.	Development of automated systems and electronic services	71
5.3.	Use of Rospatent internet resources. Official and informational publications of Rospatent and FIPS	72
5.4.	Development of State Patent Collection and information services	79

6	SCIENTIFIC, EDUCATIONAL AND AWARENESS-RAISING ACTIVITY	85
	Introduction	86
6.1.	Scientific activity	87
6.2.	Educational activity	90
6.3.	Raising the awareness: forums, conferences, seminars, round tables, etc.	93
7	MODERN PATENT ANALYTICS. FIPS PROJECT OFFICE PRACTICE	101
	Introduction	102
7.1.	Insight managed analytics	103
7.2.	Consulting products and services	104
7.3.	Old and new business tasks	104
7.4.	Development of competencies	104
7.5.	Educational and training programs on patent analytics	105
7.6.	Openness to partnership	106
8	ROSPATENT IN PROJECT "OPEN GOVERNMENT"	109
	Introduction	110
8.1.	Main financial indicators of Rospatent	111
8.2.	Human resources and anti-corruption activities	111
8.3.	Realization of the concept of openness of Rospatent	113
**	ANNEX TO THE ANNUAL REPORT	117
	Includes data on the activities of Rospatent in 2019	

Grigory Ivliev

Head of the Federal
Service for Intel-
lectual Property
(Rospatent)

DEAR FRIENDS!

In his traditional address to the Federal Assembly of the Russian Federation, Vladimir Putin has emphasized that “today the speed of technological change in the world is increasing manifold, and we must create our own technologies and standards in the areas that define our future”. He clearly specified the key priorities of Russian technological development: artificial intelligence, genetics, new materials, energy sources and digital technology. By succeeding, by developing these technologies, protecting them with intellectual property tools, we are capable to strengthen position of the Russian Federation among the technological leaders, and, as a result, to enhance the quality of life of our people, future generations.

The President of the Russian Federation highlighted the need for regulatory and infrastructural changes, for creating conditions for high technology development in our country. Vladimir Putin brought the attention of ministers, senators, members of the State Duma to the pressing need to adopt a “technological legislative package” as soon as possible; to introduce pilot legal framework for the development and implementation of the newest

technology; to set up a support mechanism for innovative businesses, start-ups; to support high-technology exports.

The intellectual property system both in Russia and in the world offers great opportunities to achieve the tasks set by the President. New technologies should have timely and high-quality legal protection not only nationally, but also abroad. Patent research, patent analytics and patent technology intelligence should become an integral part of any research and development. Using them, we could wisely determine technological and research priorities in the fields defined by the President; determine the markets, where innovative patented technology is in the highest demand.

We have to develop the technology transfer system, to involve leading research centers in the development of applied innovations, to strengthen mutually beneficial cooperation between scientific, research sector and industry, business. We have to encourage authors to create unique products and to be engaged in the process of their implementation and commercialization. Inventors, scientists, researchers and developers should gain not only

public recognition, but also an adequate financial reward. We have to create financial instruments in the IP field: from lending against the pledge of IP rights, fair and transparent evaluation of IP assets to preferential taxes for innovative companies. We should initiate any steps towards systematic strengthening of technological independence of our country without neglecting global research and scientific cooperation, including the promotion of scientific and technological children's creativity, education and raising public awareness of the IP sphere.

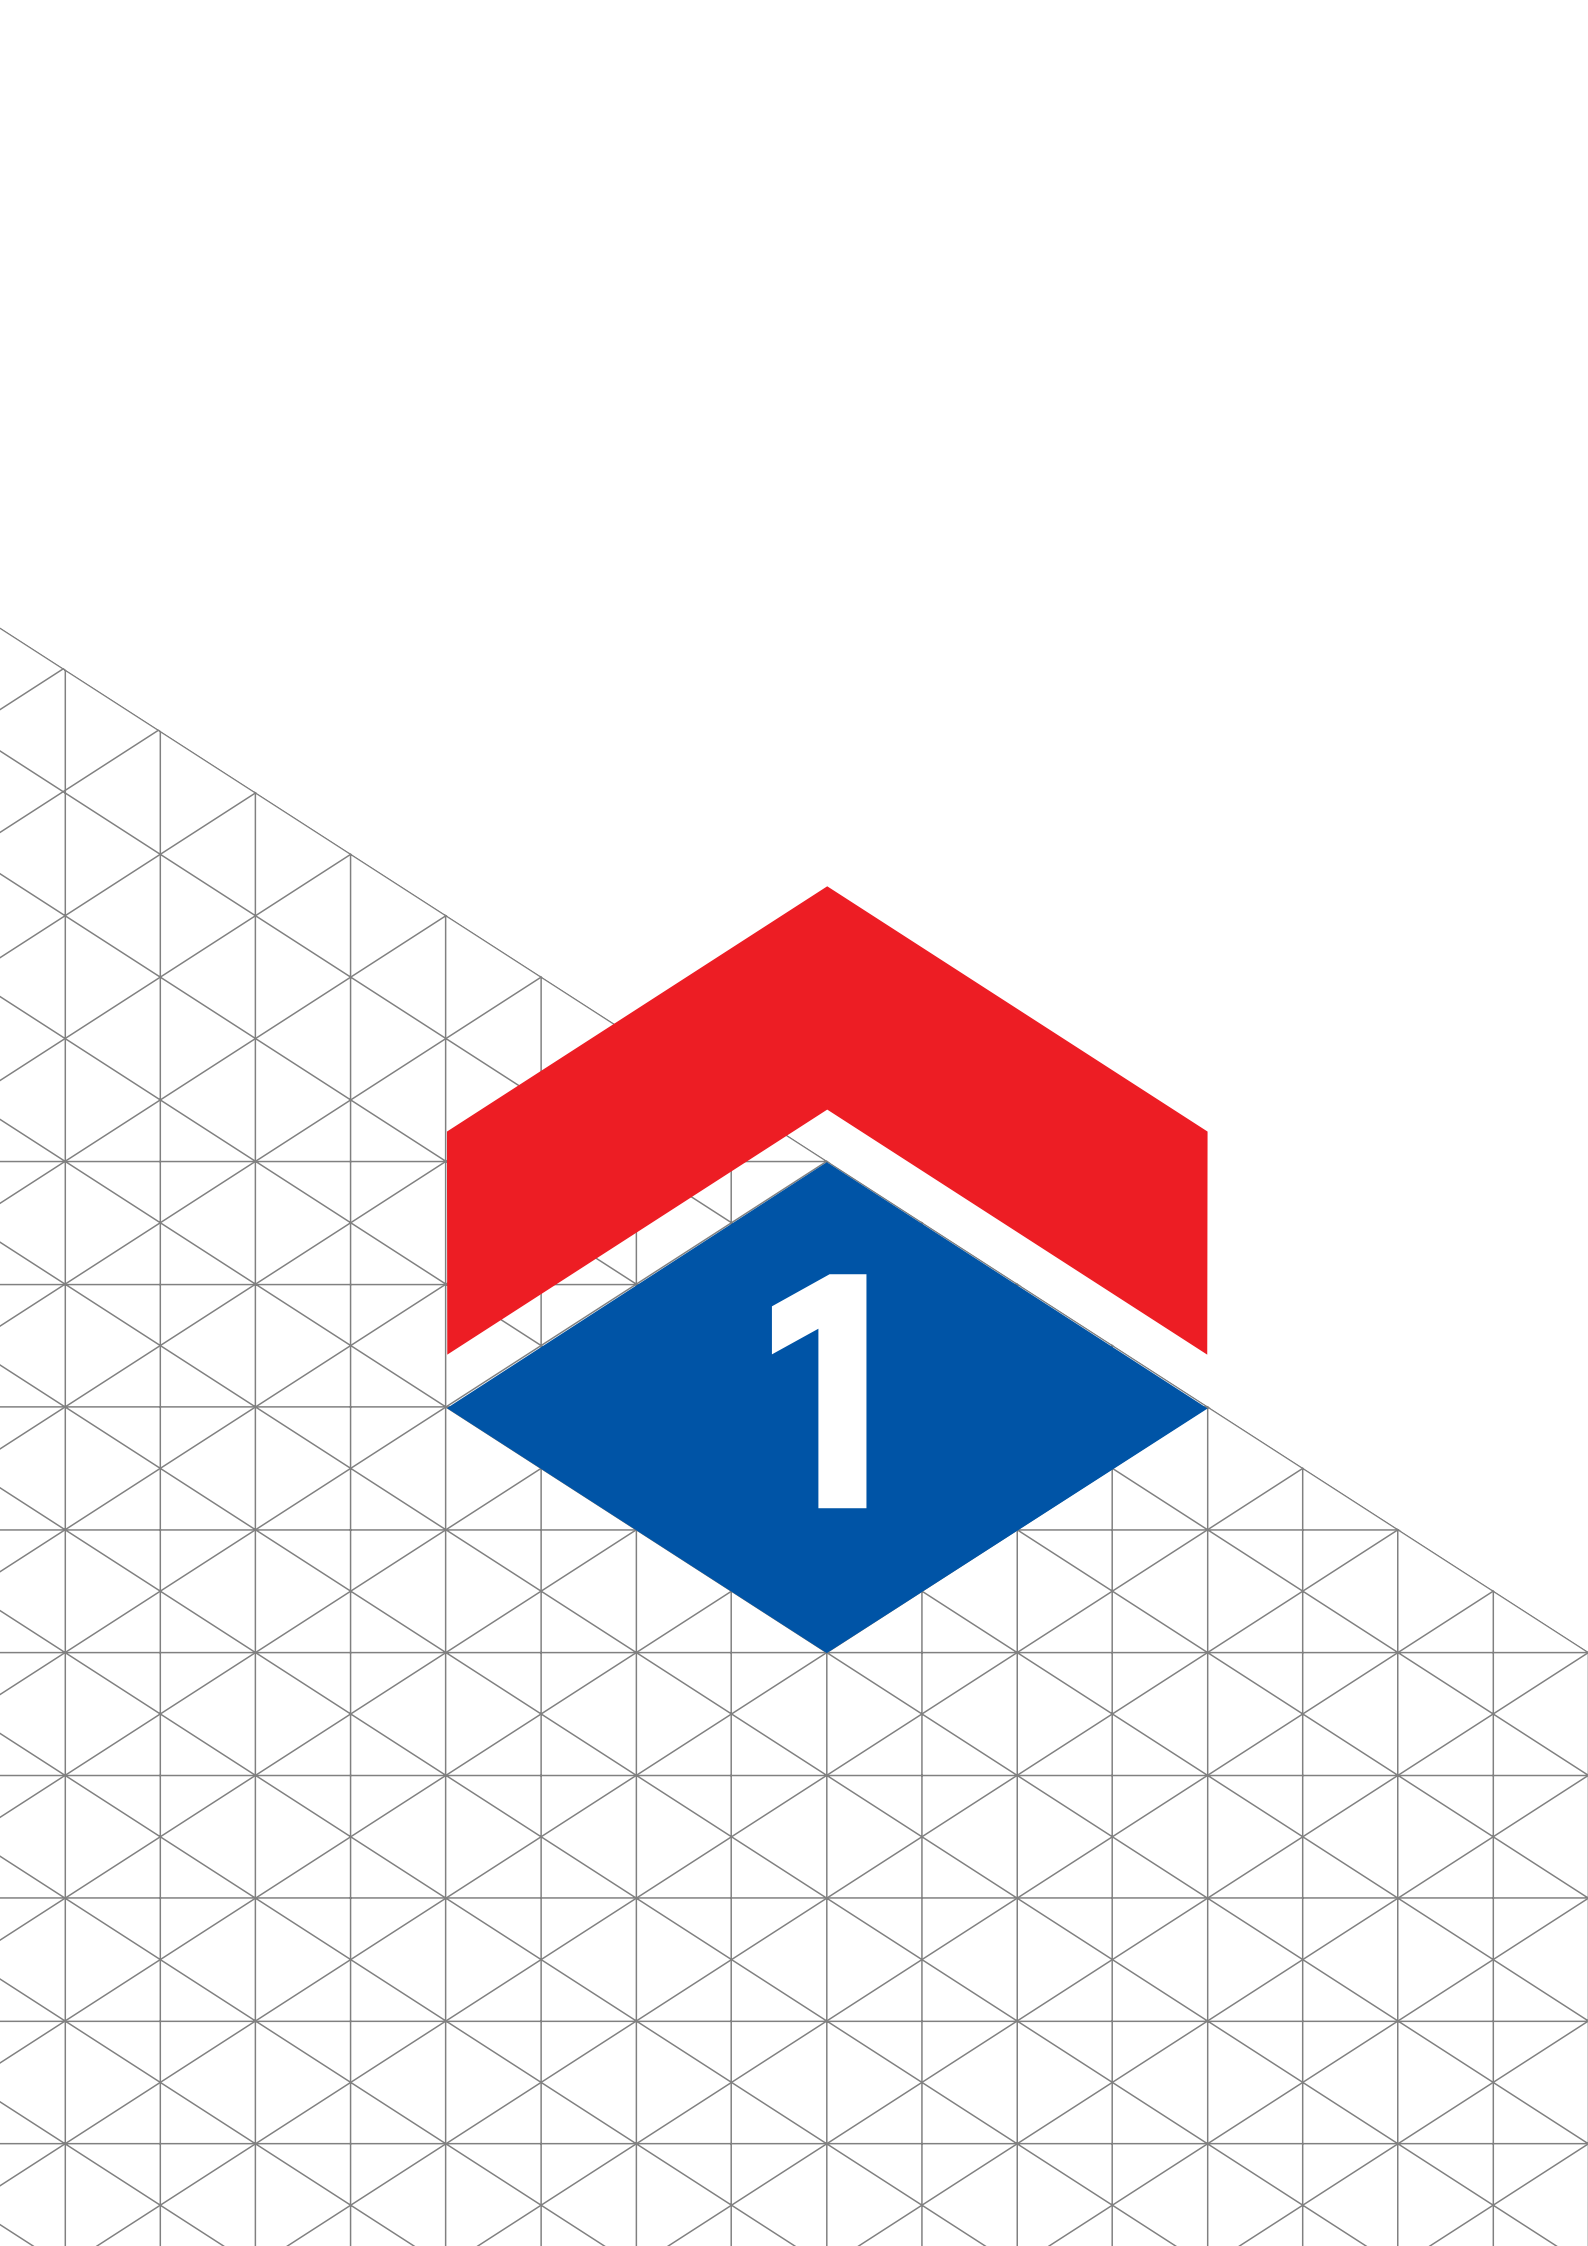

One of the major achievements was reducing the time spent on examination of applications on all types of objects for intellectual property rights protection. Provisions on IP field development were included in a number of government documents, including the Guidelines for Government Activity till 2024, National Program "Digital economy of the Russian Federation", National Project "Science", measures of export support and many others.

We have strengthened the position of the Russian Federation in the World Intellectual Property Organization (WIPO). This involves

the promotion of the Russian language as a working language of the Madrid and Hague International Registration Systems, and the increased use of the Russian language at WIPO. The Russian Federation is a leader of WIPO's Task Forces, working on updating the international standards in the field of IP, including the use of 3D technologies and the blockchain technology. We have also started working on the Accession to the Geneva Act of the Lisbon Agreement on Appellations of Origin and Geographical Indications.

A number of draft legislations, created in collaboration with Rospatent, has been submitted to the State Duma of the Federal Assembly of the Russian Federation. They are aimed at enhancing active use in the national economy of the main intangible asset of XXI century — the intellectual property, the driver of technological development and the basis of social well-being.

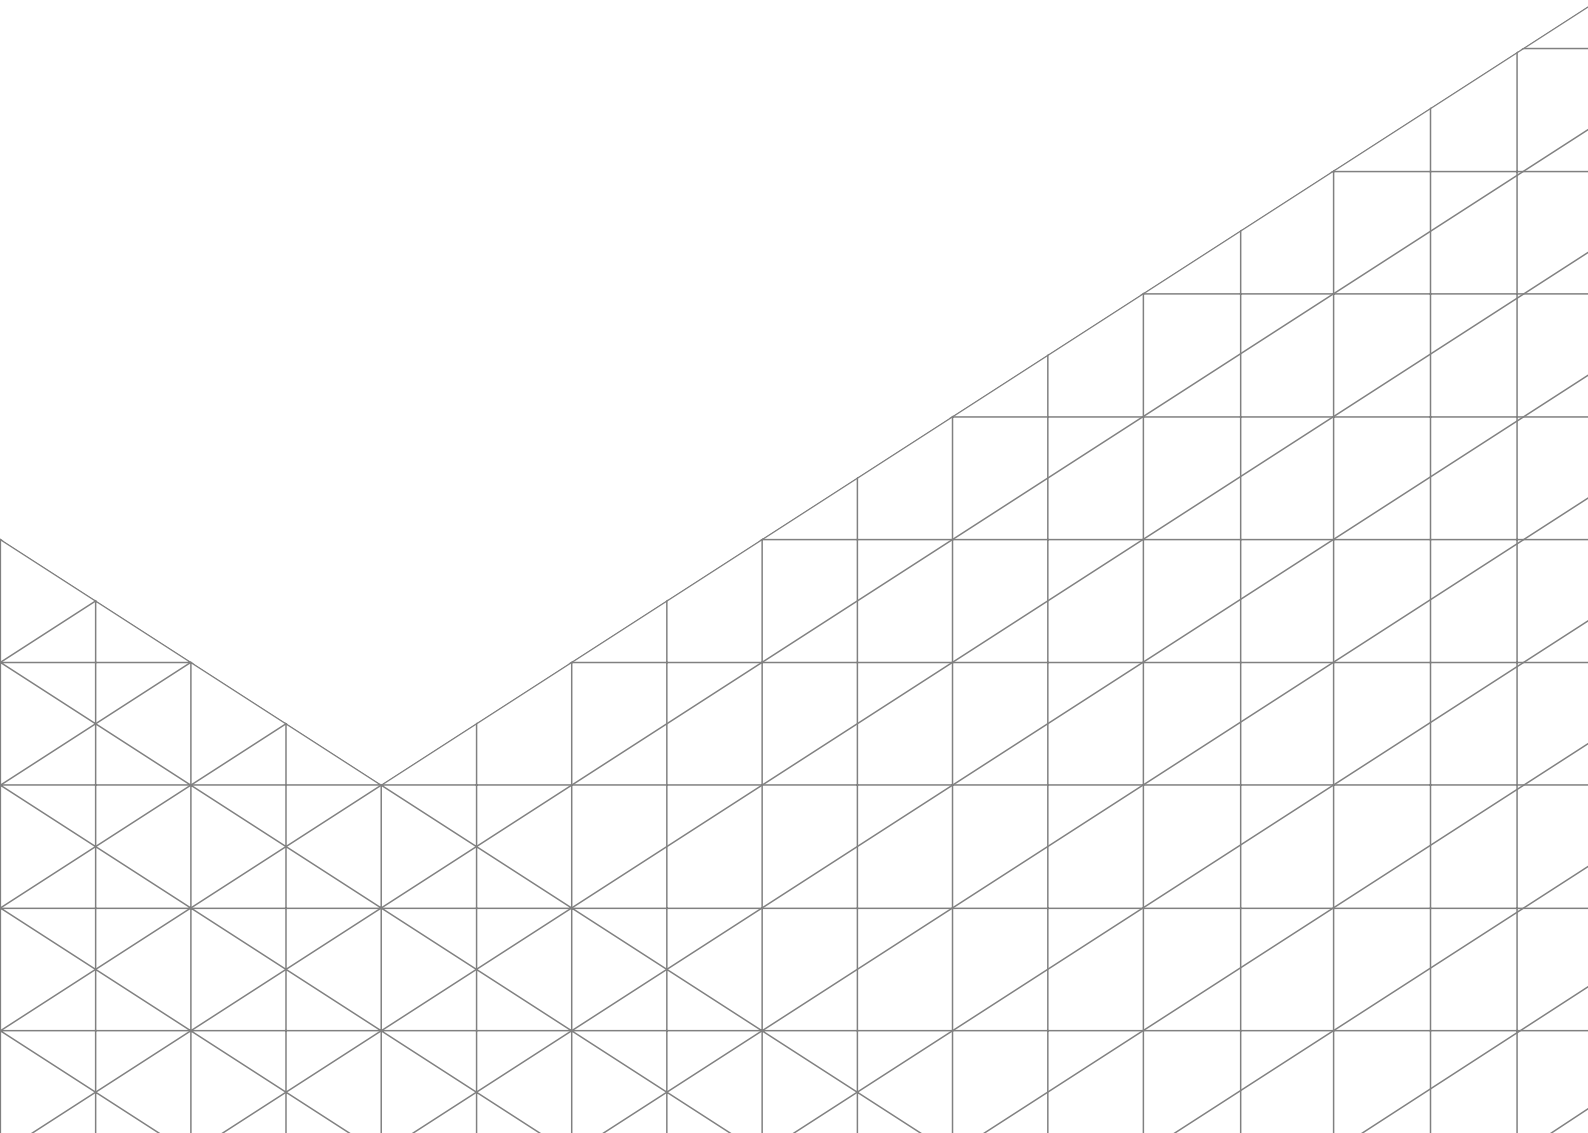

In 2020 this work will be continued in order to create digital system of intellectual property, which allows to generate a full-fledged intellectual property market and to adapt the legislation to the challenges of the digital era.

ACTIVITIES OF ROSPATENT

in the sphere of legal protection
of objects for IP rights protection:
provision of public services and
examination of appeals and
applications

L. Kiriya,

Deputy Head

INTRODUCTION

Adaptation of legislation in the field of IP legal protection to the challenges of the digital economy became one of the most important tasks of Rospatent in 2019. The formation of a system of public services that is convenient for the applicants and right-holders, ensuring the quality of the services and accessibility was aimed at accomplishment of this task.

In 2019, a number of bills was proposed to the State Duma of the Russian Federation, elaborated with participation of Rospatent, which are intended to ensure the active use of intellectual property in modern economy. Particular attention in the bills was given to new legal opportunities, allowing applicants to attach three-dimensional models of industrial property objects in electronic format to the application materials, and allowing issuance of electronic granted protection certificates by Rospatent.

In 2019, in the legislation on the protection of intellectual property rights, a new object of intellectual property for the Russian Federation appeared – geographical indication. Increased use of these objects of intellectual property in the economies of the country regions will provide additional support to the Russian manufacturers to enter foreign markets.

In 2019, there was a significant increase in filing of applications for the state registration of trademarks and service marks with Rospatent. There is also an increase in filing of applications for the state registration of industrial designs, utility models, appellations of origin, computer programs, databases and topologies of integrated circuits.

A considerable achievement of 2019 was further reduction of the time limits for consideration of applications for all objects for IP rights protection and corresponding increase in the number of applications examined.

Steady reduction of the time limits for consideration of applications for all objects for IP rights protection and increase of the total volume of decisions made on objects for IP rights protection became possible also due to the development of electronic filing services. In 2019, the number of requests for providing public services submitted to Rospatent in electronic form increased by more than 40% compared to 2018.

Further development of various digital services is planned to increase convenience of providing public services by Rospatent. It is planned to implement 14 new information systems for registration and protection of intellectual property rights until 2021.

1.1.

LEGAL AND METHODOLOGICAL SUPPORT OF THE PROVISION OF PUBLIC SERVICES

In 2019, a new object of intellectual property of the Russian Federation – geographical indications – appeared in the legislation on the protection of intellectual rights to the results of intellectual activity and means of individualization. Federal Law No. 230-FZ dated July 26, 2019 “On the amendments to Part 4 of the Civil Code of the Russian Federation” and articles 1 and 23.1 of Federal Law “On the state regulation of production and circulation of ethyl alcohol, alcoholic and alcohol-containing products and on the restriction of consumption (drinking) of alcoholic products” will enter into force on July 27, 2020, except the eighth and ninth paragraphs of subparagraph ‘e’ of paragraph 10 of Article 1 of the present Federal Law, that will come into force on July 28, 2025.

In particular, a new edition of subparagraph 1 of paragraph 3 of chapter 76 of the Civil Code of the Russian Federation (hereinafter – the Code) is given, where the concept of a geographical indication is given, which is granted legal protection, as a sign identifying goods originating from the Region of a geographic area. Moreover, certain quality, reputation or other characteristics of such a product to a large extent should be associated with its geographical origin (product characteristics). In the Region of this geographic area, at least one of the stages of production of the goods should be carried out, which has a significant impact on the formation of the characteristics of the goods.

The established requirements for the provision of legal protection for a geographical indication are softer than the requirements for the protection of appellations of origin (hereinafter – NIPT). Novels on geographical indications will contribute to the intensification of use of such intellectual property objects in the economies of the federal subjects of the Russian Federation, to raising the awareness of regions in the country and in the world, investing in their development, preserving rural settlements, increasing job opportunities, and developing tourism.

In order to improve the procedure for examination of applications for state registration of intellectual property results by Rospatent the Draft of Federal Law No. 873108-7-FZ “On Amendments to Part IV of the Civil Code of

the Russian Federation” (providing for the state registration of intellectual property objects) was proposed to the State Duma of the Federal Assembly of the Russian Federation. The Draft introduces amendments to the Code that provide Rospatent with the opportunity to carry out activities related to the legal protection of the results of intellectual activity directly or through its subordinate institution (the Institute). The Draft also ensures improving the procedure for conducting an information search and examination of an application for a patent for an invention or utility model by creating conditions for preliminary information search and evaluating patentability of the claimed technical solution by the Russian scientific and educational organizations accredited by Rospatent with competencies in the specific areas of knowledge. Such accreditation will be free of charge. Preliminary information search service will be provided to applicants on a voluntary basis.

In addition, in 2019 the Draft of Federal law No. 873108-7-FZ “On Amendments to the Civil Code of the Russian Federation (on the expansion of the use of electronic technologies in registering intellectual property rights)” was submitted to the State Duma of the Russian Federation, which was prepared as part of federal project “Normative regulation of digital environment” of national program “Digital Economy of the Russian Federation”, approved by the Government Commission on Digital Development, the use of information technologies for improving the quality of life and the conditions for doing business (Protocol No. 6 of December 27, 2018).

Aimed at improving the system of state registration of intellectual property, the Draft provides for amendments to the Code relating to providing the applicant with the opportunity to attach three-dimensional models of the claimed inventions, utility models, industrial designs, trademarks in electronic format to the application materials. The Draft also proposes to issue electronic certificates on granted protection, with the exception of patent for secret inventions, with retaining the opportunity to receive them on paper carrier at the request of the applicant.

Rospatent took an active part in the elaboration of another Draft, also submitted to the State Duma of the Russian Federation in 2019, “On Amendments to Article 1360 of the Civil Code of the Russian Federation (in terms of clarifying provisions on the use of an invention, utility model or industrial

design in the interests of national security)” (No. 842633–7).

The draft law provides for a new edition of Article 1360 of the Code, which will allow applying this legal mechanism for using an invention, utility model or industrial design in the interests of national security to situations of necessary measures to protect the life and health of citizens with the specification of guarantees for payment of compensation to patent holders. The methodology for determining the amount of compensation and the procedure for its payment will be approved by the Government of the Russian Federation.

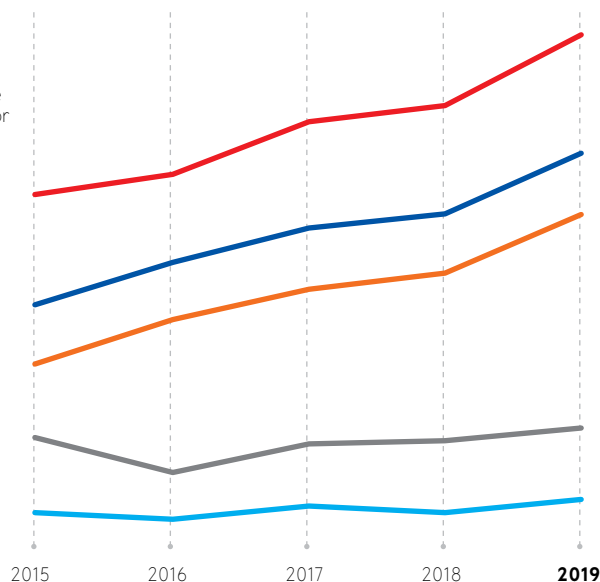

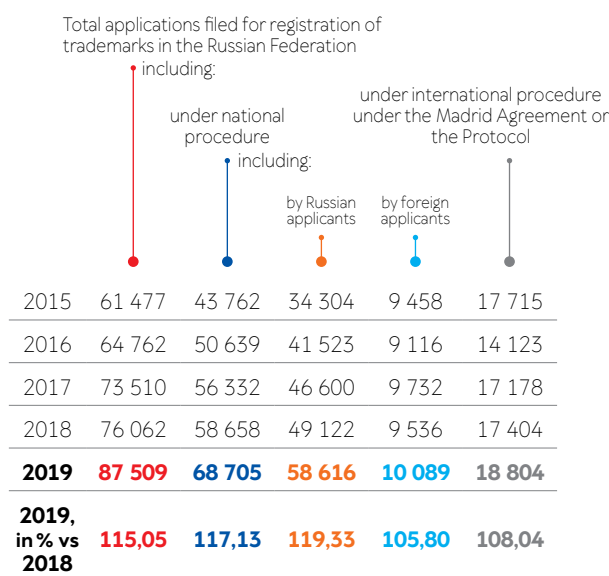

The possibility of coercive measures of the state on an unscrupulous right holder is provided for by international acts. The Draft complies with the provisions of Article 31 of the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) (WTO, Uruguay Round of Multilateral Trade Negotiations, April 15, 1994). The proposed changes create an opportunity to make up quickly the lack or shortage in the country of foreign patented medicines or medical devices that are necessary to protect the life and health of the population.

As for the regulation of methodological support for the provision of public services, in accordance with the requirements of Federal

Law “On the organization of the provision of state and municipal services” in accordance with the new edition of the Rules for the development and approval of administrative regulations for provision of public services (approved by Decree of the Government of the Russian Federation of May 16, 2011 No. 373, edited by Decree of the Government of the Russian Federation dated June 13, 2018 No. 676) administrative regulations are approved by the body providing the public services, unless otherwise stipulated by the federal laws.

Due to the changes in the legislation in the field of organization of the provision of state and municipal services, ratification of the Geneva Act of the Hague Agreement on the international registration of industrial designs, as well as in order to take into account future changes in the legislation in the field of provision of public services by Rospatent, including in electronic format, as well as legislation in the field of legal protection of industrial designs, in 2019 Rospatent completed the preparation, submission for public discussion of draft orders of the Ministry of Economic Development of the Russian Federation on recognition of the previously adopted orders on approval of administrative regulations and drafts of new administrative regulations, regulating the provision of all 26 public services in the established field of activity by Rospatent as invalid.

Figure 1
Dynamics of filing of applications for state registration of trademarks of the Russian Federation in 2015–2019

1.2.

STATE REGISTRATION OF TRADEMARK, SERVICE MARK, COLLECTIVE MARK

In 2019, there was a significant increase in filing applications to Rospatent for state registration of trademarks and service marks (hereinafter referred to as the trademark). As compared with the previous reported period, the increase constitutes 15.05%, while the receipt under the national procedure increased by 17.13% and the receipt under the international procedure increased by 8.04% (see Figure 1).

The growth of the rate of filed applications for registration of trademarks was provided due to increase of the rate of applications filed by Russian applicants in 2019–19.33%.

In 2019, Rospatent continued to conduct activities aimed at reducing the time limits for consideration of applications, which, among other things, contributed to an increase in the number of applications for trademarks filed by the Russian applicants. In addition, in 2019, measures were strengthened to improve the quality of examination of applications for trademarks, including through internal control of workflow on applications.

In addition, in 2019 as compared to 2018, the average time of consideration of applications

under the national procedure decreased by 2.07 months and constituted 5.59 months; the time of consideration under the international procedure decreased by 1 month and constituted 6.33 months. Thus, the average time of consideration of applications in 2019 constituted 5.96 months.

The current dynamics of the reduction in terms allows predicting their further reduction in 2020.

One of the positive trends in 2019 was that with an increase in the number of incoming applications, the time required to consider the application continued to decrease.

In 2019, the overall indicator of examined applications at the stage of examination remained at the level of 2018 and amounted to 82,914 units (see chart 2). However, in 2019 compared with 2018, the number of decisions on refusal at the stage of examination of the claimed designation increased by 10.57%. The growth of this indicator was also characteristic of the previous reporting period.

In 2019, the number of registered trademarks increased compared to the previous reporting period. The dynamics of trademark registration is shown in Figure 3.

The dynamics of filing, consideration of applications for state registration of trademarks

Figure 2
Dynamics of consideration of applications for state registration of trademarks of the Russian Federation in 2015–2019

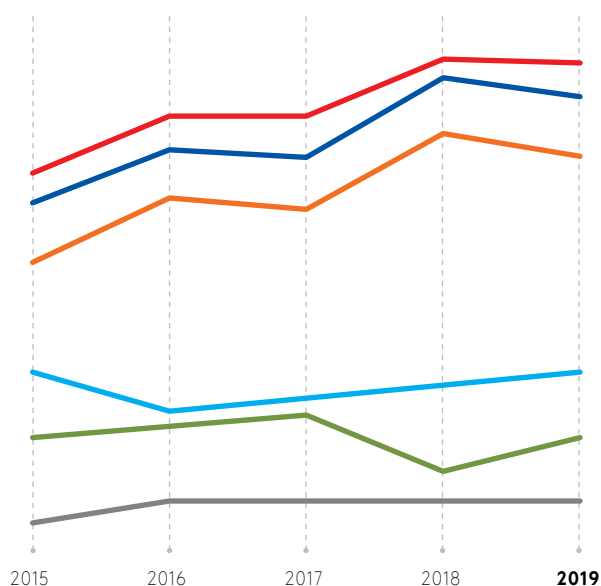

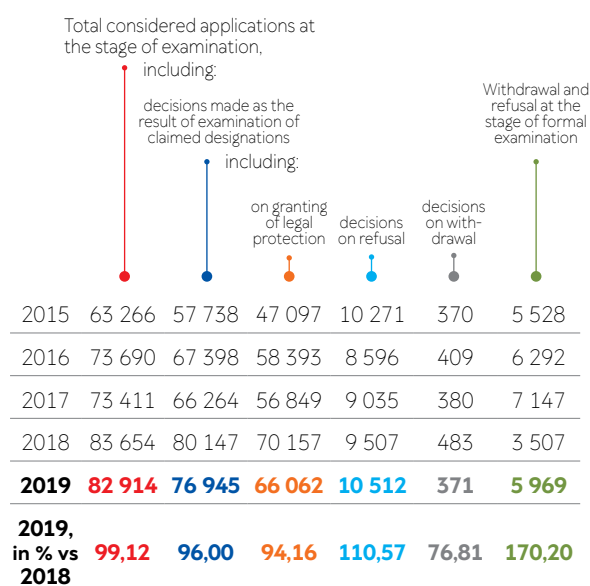

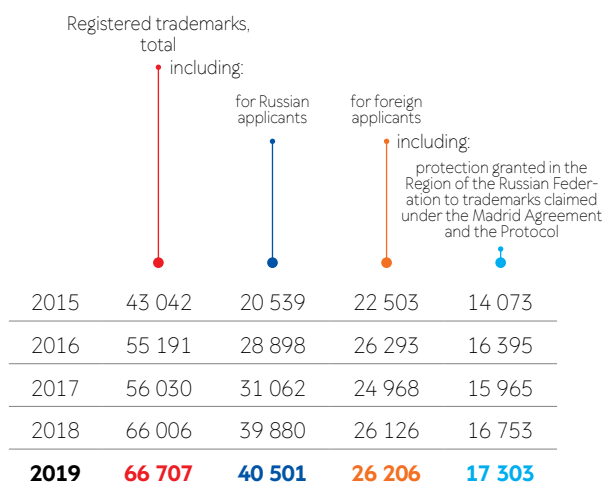

Figure 3
Dynamics of registration of trademarks in 2015–2019

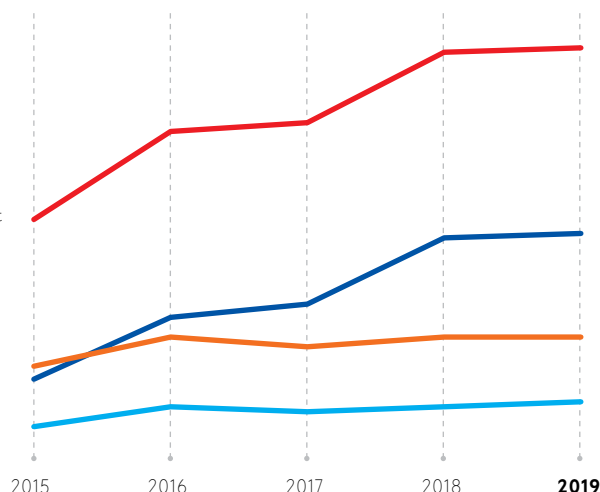

and the dynamics of trademark registration, as well as other statistics are given in tables 1.1–1.9 of Annex 1 to the Report.

1.3.

STATE REGISTRATION OF INVENTIONS, UTILITY MODELS

In 2019 as compared to 2018, the number of filed applications for inventions decreased by 6.44%. The decrease in the number of received applications was conditioned by decrease of submission of applications by the Russian applicants (their number decreased by 6.37% compared to 2018), as well as a decrease in filing of applications by foreign applicants which number decreased by 6.37% compared to 2018 (see Table 1.10 of Annex 1 to the Report).

At the same time, among the leading countries in terms of the number of applications for an invention, the decrease in filings in the Russian Federation affected a wide range of countries. Thus, the number of applications filed by the United States applicants decreased by 10.31% compared to 2018. The number of applications filed by the German applicants decreased by 14.54% compared to 2018. The number of applications filed by applicants from Japan decreased by 17.29% compared to 2018. At the same time, the number of applications filed by the Chinese applicants increased by 40.37%. Also in 2019, there was an increase in the filing of applications from the applicants of the Republic of Korea – an increase of 9.67%. The

dynamics of filing applications for inventions in 2019 by foreign applicants is presented in table 1.17 of Annex 1 to the Report.

In 2019, 45,742 applications for inventions were examined. As compared to 2018, the number of applications examined in 2019 increased by 337 applications.

The increase in the number of examined applications is explained by the reduction in time limits for their consideration, which, in turn, made it possible to consider a greater number of applications in the reported period.

The average time limit of consideration of applications for an invention at the end of 2019 was 5.69 months, which is 29.3% less than in 2018 (8.05 months).

The average time limit of the first step of examination also decreased, which constituted 4.95 months in 2019, and in 2018 – 7.65 months (see Figure 4).

Figure 4
The average time limit of the first action of examination of inventions for 2017–2019
(Time limit of the first action, months)

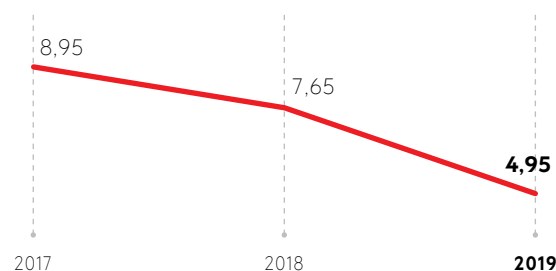

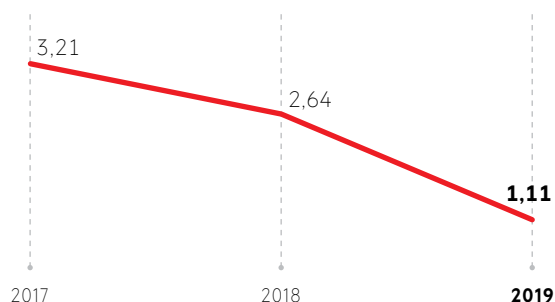

Figure 5
The average term of the first action of examination for utility models for 2017–2019
 (Time limit of the first action, months)

In 2019 in addition to consideration of national and international applications, the Office carried out information searches for the Patent Offices of Turkey, the CIS countries and the Eurasian Patent Office.

In 2019, compared to 2018, the number of applications for utility models increased by 4% (9,747 applications in 2018 and 10,136 applications in 2019) (see table 1.23 of Annex 1 to the Report).

Thus, in particular, in 2019, the Russian applicants filed for 4.91% more applications than in 2018 (9262 in 2018 and 9717 in 2019). At the same time, the number of utility model applications filed by foreign applicants in 2019 decreased by 13.61% (485 in 2018 and 419 in 2019) (see table 1.23 of Annex 1 to the Report).

Based on the foregoing, it can be noted that in 2019 the interest in filing applications for such an object of patent law as a utility model increased.

At the same time, compared with 2018 in 2019, the number of applications for a utility model considered decreased by 3.5%. Also, the number of registered utility models decreased by 10.3%.

In 2019, the average time limits of consideration of applications for a utility model continued to decrease, which amounted to 1.35 months, which is 52.8% less than in 2018.

It should be noted that the Novosibirsk branch of FIPS made a significant contribution to consideration of applications for utility model in 2019.

The average time limit of the first action also decreased, which was 1.11 months for the whole year 2019, and 2.64 months in 2018 (see Figure 5).

The main indicators of the works on provision of the state services for the state registration of inventions and utility models and granting of patents for them in 2019 are shown in tables 1.10–1.32 of Annex 1 to the Report.

1.4.

STATE REGISTRATION OF INDUSTRIAL DESIGNS

From 2015, there was a steady growth in the receipt of applications for industrial designs, which lasted until 2019.

In 2019, 6920 applications for industrial designs were filed, which is 1012 more than filed

Figure 6
Dynamics of filing of applications for granting of patents on industrial design in the Russian Federation in 2015–2019

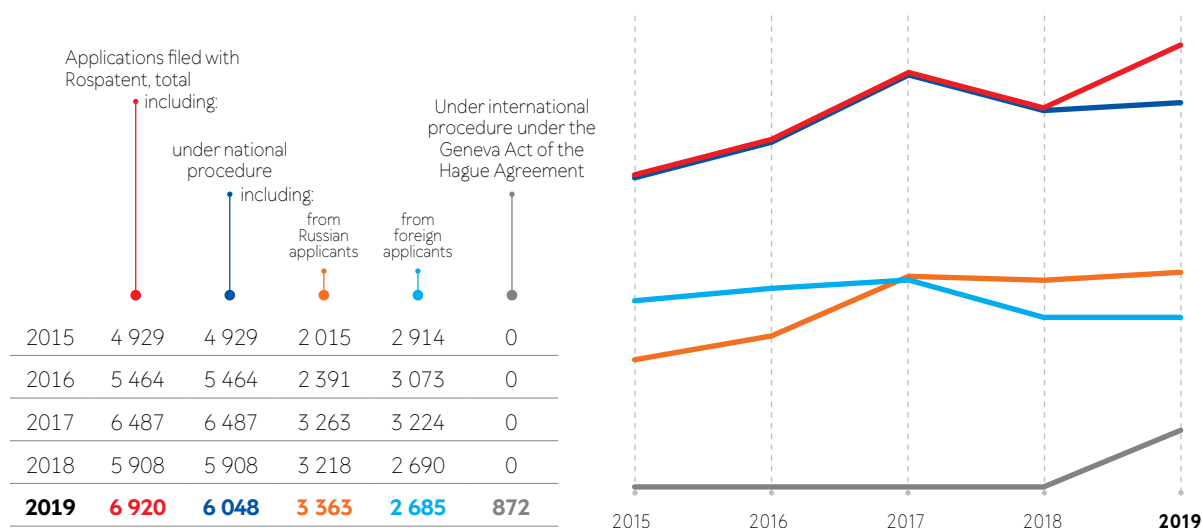

Figure 7
Time for consideration of applications
on industrial designs in Russian Federation
in 2015–2019

(Substantive examination time limit)

in the last year. Thus, 6048 applications for industrial designs under the national procedure and 872 applications in accordance with the Geneva Act of the Hague Agreement were filed (hereinafter – the Geneva Act of the Hague Agreement). In percentage terms, the growth in applications amounted to 17.1% (see Figure 6).

When considering applications for grant of a patent for an industrial design, much attention was paid to the task facing the Office on reducing the terms required for execution of administrative procedures. In 2019, 6,903 applications were examined, which is 1.2% more than last year.

The average time limit of consideration of applications for grant of a patent for an industrial design at the stage of substantive examination constitutes 4.4 months. Data on the timing of consideration of applications at the stage of substantive examination by year are shown in Figure 7.

Such a term of consideration creates large safety margin of the system to ensure the term of consideration of applications for industrial designs established by the government, including in case of sharp increase in receipt of applications for industrial designs in 2020, including receipts of applications in accordance with the Geneva Act of the Hague Agreement.

In 2019, the automated workflow management system for applications filed in accordance with the Geneva Act of the Hague Agreement was put into operation.

On June 27, 2019, amendments to part four of the Civil Code of the Russian Federation came into force, providing, by analogy with

inventions, the temporary legal protection of industrial designs. Such protection commences from the date of publication of information on the application for an industrial design, which is carried out by the request of the applicant after completion of formal examination. In 2019, no such applications were received by Rospatent.

The main indicators of receipt of applications and grant of patents for industrial designs are given in the statistical Tables 1.33–1.38 of Annex 1 to the Report.

1.5.

STATE REGISTRATION OF APPELLATIONS OF ORIGIN AND GRANT OF EXCLUSIVE RIGHTS TO SUCH APPELLATIONS, AS WELL AS GRANT OF EXCLUSIVE RIGHTS TO APPELLATIONS OF ORIGIN REGISTERED EARLIER

In 2019 as compared to 2018, the number of filed applications for state registration of the AOs and for grant of exclusive right to such appellations and applications for grant of an exclusive right to AOs registered earlier (hereinafter referred to as applications for AOs) increased insignificantly (by 1%).

The stable receipt of applications for AOs for the last 2 years compared to 2017 and 2016, as well as compared to earlier years is associated with the active work of Rospatent with regional producers of traditional goods and the work on the promotion of AOs as an object of legal protection for traditional goods having special properties. Such work was carried out in the framework of conferences, meetings, seminars, thematic meetings with patent attorneys and other experts in the field of intellectual property, as well as in the course of interaction with the representatives of administrations of the subjects of the Russian Federation and executive authorities, in particular, authorized to provide conclusions provided by law to applications and declarations concerning AOs.

The dynamics for application filing and grant of certificates for AOs is given in Table 1.39 of Annex 1 to the Report and in Figure 8.

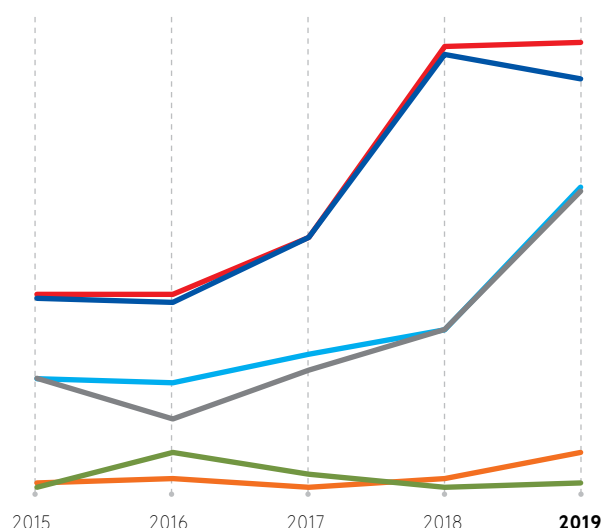

For a number of constituent subjects of the Russian Federation, the number of applications in the reported year increased as compared to the previous year.

Figure 8
Dynamics of application filing and grant of certificates for AOs in the Russian Federation in 2015–2019

Applications filed for State registration of AOs and grant of exclusive right to AOs, as well as applications for grant of exclusive right to AOs registered earlier, total

Among the applications filed for registration as AOs in 2019, 60 applications refer to the designations not previously registered as AOs. Special mention should be made to such designations as “Semenovskaya Matryoshka”, “Tagilsky podnos”, “Sol-Iletskii arbuzi”, “Konakovskiy fayans”, “Taimyrskiy sig”, “Vyatkiye solenii ogurzi”, “Kalmyzkaya dombra”.

The leading position for the goods, which legal protection of AOs and/or grant of an exclusive right to AOs has been sought, occupied by the food products among which such designations as “Serunskaya legenda” (cheese), “Kubanskiye yabloki”, “Kubanskiy ranniy kartofel”, “Ctolbushinskiy zvar”, “Chleb Gorodichenskiy”, “Shartan Chuvashskiy”, “Viborgskiy krendel”, “Krasnodarskaya zemlyanika” (strawberry) were filed. The second rate in terms of the number of applications is taken by mineral waters and handicrafts (see Figure 10).

In 2019, the number of applications for which the consideration was completed, almost doubled compared to 2018, and, as a result, the number of granted certificates increased, which, first of all, is due to the increase in the number of incoming conclusions from authorized bodies, on which basis the applications are examined.

Among authorized bodies, Rospatent cooperates most closely with the Ministry of Agriculture of the Russian Federation, which is authorized to issue conclusions on the most extensive list of goods.

It should be noted that in 2019 new designations were registered as AOs – 44, which is 2 times more compared with 2018 (18).

In 2019, applications continued to be received for the goods for which federal executive body authorized to issue conclusions had not been defined.

In 2019, compared with previous years, the number of applications filed by foreign applicants increased (8).

The positive dynamics as compared to the previous years confirms the practicability of continuation of work aimed at drawing public attention to the issues of ensuring legal protection of AOs, providing support to regional producers of traditional goods.

1.6.

STATE REGISTRATION OF COMPUTER PROGRAMS, DATABASES, TOPOGRAPHIES OF INTEGRATED CIRCUITS

In 2019, the number of filed applications as compared to 2018 increased from 17,965 to 20,840 applications (increase of 16%).

At the same time, the number of applications for state registration of computer programs (hereinafter referred to as the CPs) increased by 14.3%, the number of applications for state registration of databases (hereinafter referred to as DBs) increased by 30.72%, and the number of applications for state registration of topographies of integrated circuits

Figure 10

Tea	1
Other	10

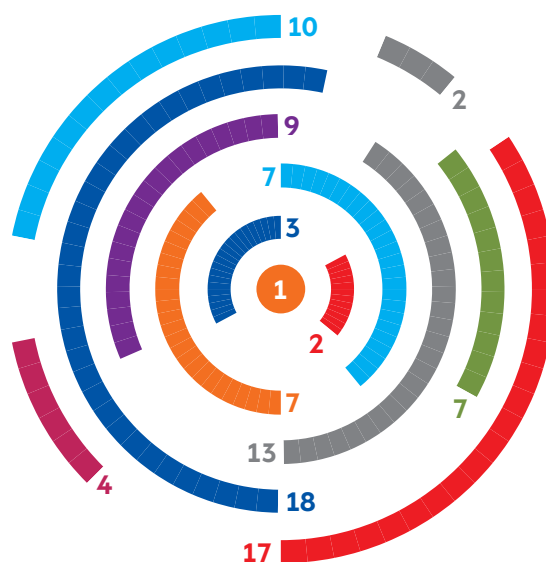

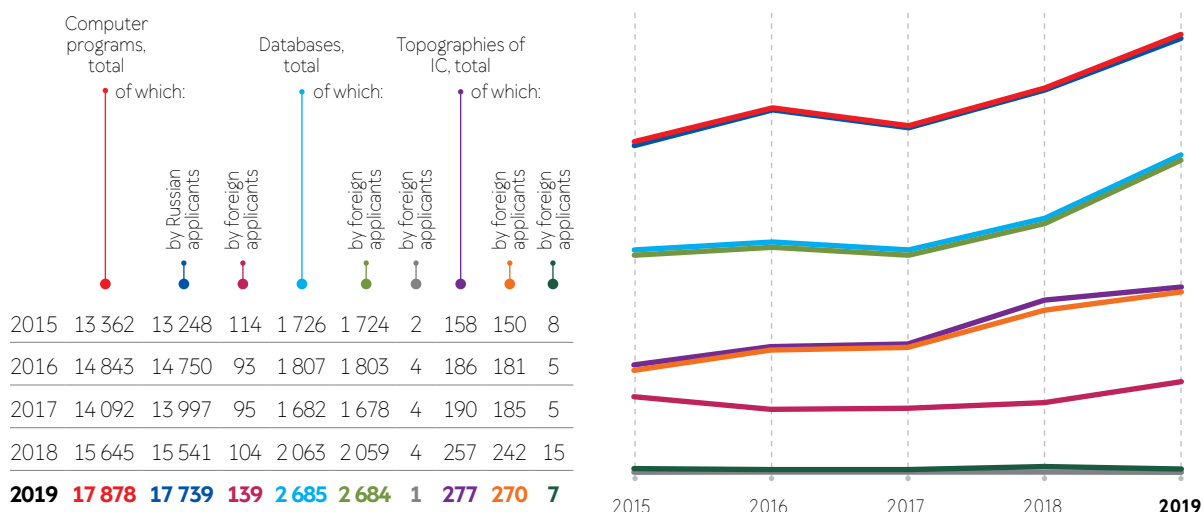

Figure 11
Dynamics of filing of applications for state registration of computer programs, databases and topographies of integrated circuits in 2015–2019

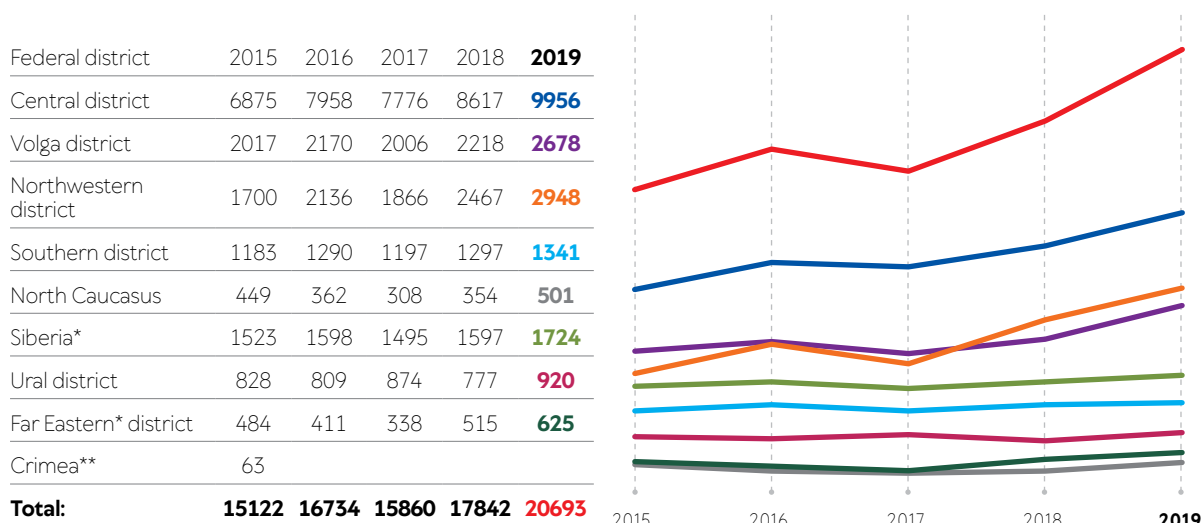

(hereinafter – TICs) increased by 7.8% (see Figure 11).

It should be noted that the highest growth of the receipt of applications as compared to 2018 was observed for the following categories of applicants, in% of the total number of applications filed: individuals (+25.5%), commercial organizations (+8.9%), governmental organizations (+8.7%).

The largest growth was observed in North Caucasian (+41.5%), the Far Eastern (+21.4%), Volga (+20.7%), Northwestern (+19.5%), Ural (+18.4%), Central (15.5%) federal districts (see Figure 12).

It should be noted that in 2019, foreign applicants from 23 countries filed 147 applications. The most active applicants were from Cyprus (31 applications), Belarus (21 applications), Ber-

Figure 12
Information about filed applications for registration of computer programs, databases, topographies of integrated circuits by federal districts of the Russian Federation in 2015–2019

* The count of filing of applications in Siberian and Far Eastern districts is done taking into account the transfer in 2018 2 entities from Siberian to Far Eastern district.

** Since 2016 is part of Southern federal district.

muda (18 applications), Kyrgyzstan (12 applications), Latvia (11 applications), Kazakhstan (10 applications), Finland (8 applications), Switzerland (6 applications), Norway (6 applications), the Great Britain (5 applications), Singapore (5 applications).

By the end of 2019, the number of applications for registration of CPs, DBs and TICs completed by consideration amounted to 21039 applications, which is 1036 more than in 2018 (+ 5.2%).

In 2019, 20,628 CPs, DBs, and TICs were registered, which is 1207 more than in 2018 (+ 6.2%) (see Figure 13).

In addition, the increase in the number of applications for CPs, DBs and TICs filed in electronic form continues. In 2019, the number of applications filed through the Single Portal of Public Services (EPGU), constituted 1099 (increase of 57.2%).

The possibility of electronic filing of applications for CPs and DBs at Rospatent website with the use of FIPS information systems is becoming more and more popular among the applicants. In 2019, 3,561 such requests were received (in 2018, 1912 requests were received) (increase of 86.2%).

When considering applications for state registration of CPs, DBs, and TICs, great attention was paid to observance of the time limits for execution of administrative procedures.

In 2019, the average time for consideration of applications was significantly reduced (for CPs and DBs: 1.28 months in 2018 and 0.44 months in 2019; for TICs: 1.23 months in 2018 and 0.41 months in 2019, and in December 2019, the average time constituted 0.4 months (CPs – 0.41 months, DBs – 0.43 months, TICs – 0.36 months).

In total as of December 31, 2019, there were 194,096 registrations.

The main indicators of receipts of applications and grant of certificates for CPs, DBs and TICs are given in Tables 1.40–1.42 of Annex 1 to the Report.

1.7.

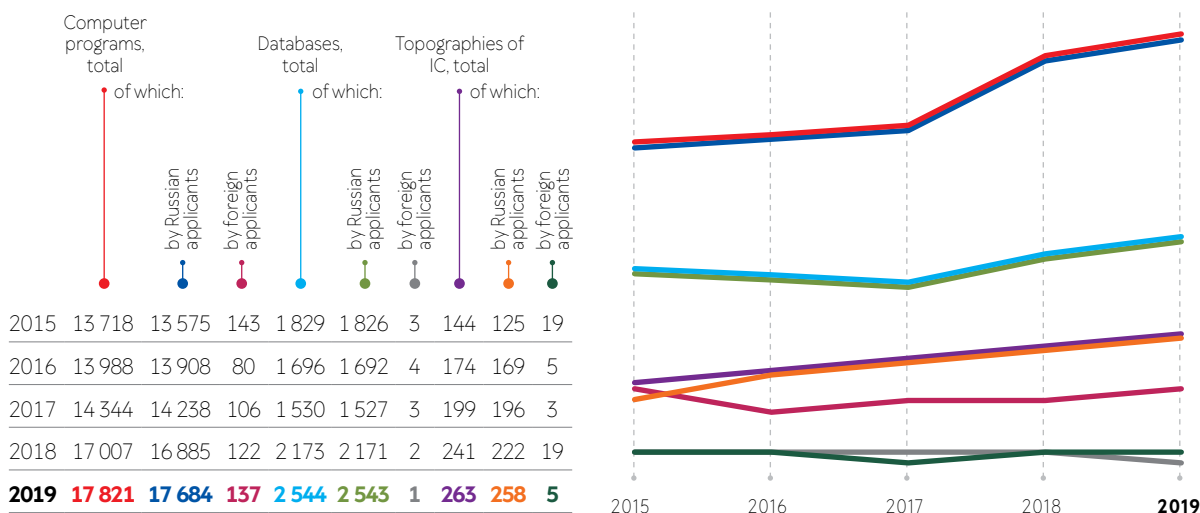

STATE REGISTRATION OF CONTRACTED DISPOSITION OF EXCLUSIVE RIGHT TO THE OBJECTS OF INTELLECTUAL PROPERTY AND TRANSFER OF EXCLUSIVE RIGHT WITHOUT A CONTRACT

This section provides information on registered contracted dispositions of exclusive right and registered transfers of exclusive right to another person without conclusion a contract with a rightholder.

1.7.1. Inventions, utility models, industrial designs

In 2019, 3,257 dispositions of exclusive rights were registered in relation to 8,064 objects of patent law.

Figure 13
Dynamics of registration of computer programs, databases and topographies of integrated circuits in 2015–2019

The dynamics of registration of dispositions of exclusive rights under the contracts of alienation, pledge of exclusive rights and grant of a right to use inventions, utility models, industrial designs in 2015–2019 is given in Table 1.43 of Annex 1 to the Report.

In 2019, the number of registered dispositions of exclusive right increased by 6.4% as compared to 2018. At that, the increase is related to newly registered dispositions under the contracts of alienation (6.4%) and right to use in accordance with license agreement (9.4%).

The total number of dispositions relating to amendments to previously registered contract (in 2018–292 contracts, in 2019–270 contracts) and on early termination of previously registered contract (in 2018–147 contracts, in 2019–147 contracts) decreased by 5.0% (decreased by 22 agreements on amendments, the number of dispositions on early termination remained unchanged).

The number of registered pledges of the exclusive right remains insignificant (17 contracts), as compared to 2018 there is increase by 9 contracts.

The opportunities provided by the state registration of a disposition under a pledge agreement are hardly used by patent owners. One of the reasons may be the low activity of financial institutions, based on the insufficient popularization of pledge agreements in relation to objects of patent law. The use of financing secured by pledge may contribute

to the implementation of new solutions in development of the country's economy.

Table 1.44 of Annex 1 to the Report shows the distribution by areas of technology of dispositions registered from 2015 to 2019 with the exclusive right to inventions, utility models, industrial designs.

The data given in Table 1.44 of Annex 1 to the Report show that the maximum number of registered dispositions relates to such a field of technology as energy, electrical engineering – 497 (see Figure 14). Compared with the previous year, the number of dispositions in this field of technology increased by 8.3%. Despite a significant decrease in the number of registered dispositions (by 20.6%) compared with the previous year in the field of chemistry and petrochemistry, this technical field remains one of the leading areas in the number of registered dispositions – 405. The top three leaders include medical field: the number of registered dispositions in this field is 401, which is 6.6% higher than last year.

In recent years, traditionally the lowest activity is observed in the field of metallurgy, with 79 registered dispositions in 2019 amounting to 78.2% of the indicator for 2018.

In other areas of technology, the number of registered dispositions has increased compared to the previous year.

Table 1.45 of Annex 1 to the Report presents the distribution of registered dispositions by the exclusive right under the contract de-

Figure 14
Number of registered dispositions of exclusive right by fields of technology in 2015–2019

Field	2015	2016	2017	2018	2019

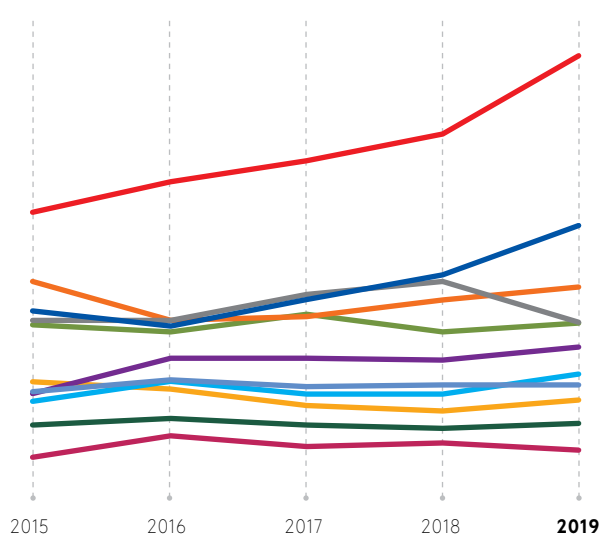

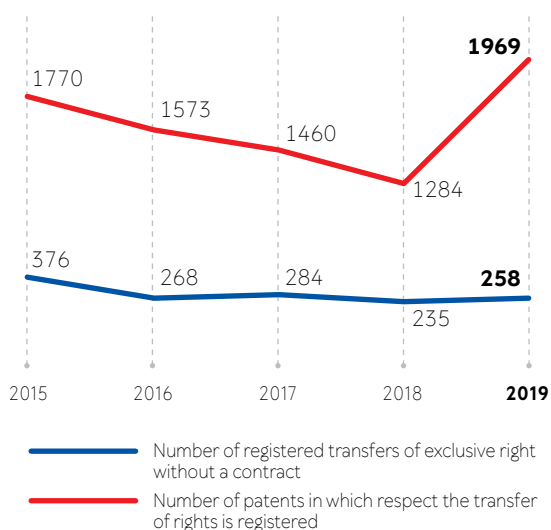

Figure 15
Dynamics of changes in the number of registered transfers of exclusive rights without a contract and the number of patents in which respect the transfer of rights is registered in 2015–2019

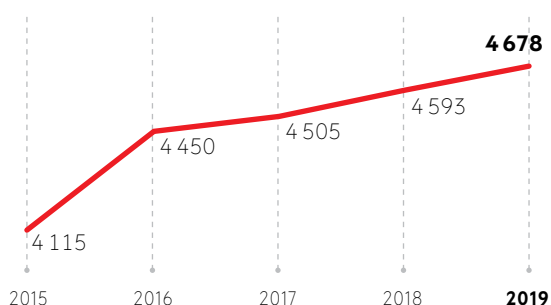

pending on the category of business entities – parties to the contracts.

In general, the relative stability of the ratio of activity of the selected categories of economic entities can be stated. Non-state enterprises still dominate as the receiving and transmitting parties. However, it should be noted that compared with the previous year, the percentage of participation of individuals acting as the receiving party increased (by 0.6%). At the same time, the participation of such a category of business entities as state enterprises, research institutes, design bureaus, universities as a receiving party decreased by 0.95%.

The quantitative indicators in relation to the transferring party of the agreements have not changed compared to the previous year.

Figure 16
Dynamics of the number of dispositions of exclusive rights to trademarks under contracts of alienation in 2015–2019

Statistics on the number of registered dispositions by the exclusive right under the contract and the number of patents in the contracts are given in table 1.46 of Annex 1 to the Report.

The number of patents for which dispositions are registered increased by 9.6% in 2019 compared to 2018, and the average number of patents in one agreement increased by 3.3% (in 2019–2.48 patents in one agreement, in 2018–2.4 patents in one contract). The increase in the number of patents in one contract can be explained both by the fact that several patents belong to the same technical task, which is solved by the patent acquirer or licensee, as well as by the financial component, since the fee for registering one disposition for several patents is less than the fee for registering several dispositions for each patent individually.

In 2019, the maximum number of patents was recorded, for which an exclusive right was registered: 8064 patents. Moreover, the increase in the number of objects in respect of which the disposal of exclusive rights was registered, occurred primarily due to industrial designs – an increase by 72.6% compared to the amount of 2018.

In 2019, the ratio between the objects for which the disposition is registered is the following: invention – 53.7%, utility model – 29.4%, industrial design – 16.9%.

The increase in 2019 of the number of patents involved in economic turnover indicates the interest of economic entities in the use of patent law objects.

In 2019, compared to 2018, the number of registered transitions of exclusive rights without concluding an agreement increased by 9.8% in relation to the objects of patent law. The fluctuation in statistics on registering the transfer of exclusive rights without an agreement from year to year is insignificant and is determined by the actual situation of patent holders, for example, reorganization, inheritance.

Figure 15 shows the dynamics of changes in the number of registered transfers of exclusive rights without an agreement and the number of patents in respect of which a transfer of rights is registered.

1.7.2. Trademarks and service marks

Table 1.47 of Annex 1 to the Report gives the data on the number of trademarks in which respect alienation of the exclusive right,

granting of the right of use under a license (sublicense) agreement and franchise (sub-concession) contract were registered in 2015–2019.

As compared to the total number of trademarks included in the subject matter of contracts of alienation and granting of the right of use, the number of trademarks in which respect the granting of the right of use under a license agreement and a franchise contract was registered in 2019, is 65.2%, and the number of trademarks under which the exclusive right is transferred on the basis of agreements of alienation, is 34.8%. Thus, the number of trademarks, for which the granting of the right of use under a license agreement and a franchise contract registered in relation to registered dispositions under a contract of alienation of the exclusive right, still is almost two times bigger.

It should be noted that in 2019 as compared to 2018, the number of registered alienations of the exclusive right to trademarks increased insignificantly (1.85%) (see Figure 16).

As before, the prevailing method of disposing exclusive right is the license and concession.

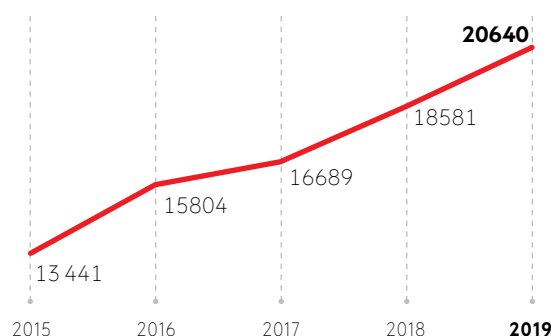

Tables 1.48 and 1.49 of Annex 1 to the Report give the data on the affiliation of the parties to the contracts to Russian and foreign persons and on the number of registered contracts and the number of trademarks in the contracts.

In 2019 as compared to 2018, a steady increase in the number of registered dispositions of exclusive right to trademarks under a license agreement and a franchise contract is observed.

The overall growth of registered transfers exceeded the amount of the last year and constituted 9.3%. The number of trademarks, in which respect a contracted disposition was registered, increased significantly as compared to 2018 (see Figure 17). At the same time, the number of registered dispositions under a franchise contract in 2019 amounted to 114.5% as compared to 2018. But the number of registered dispositions slightly decreased in 2019 as compared to 2018 (128.3%). Against the background of slight decline in the number of registered dispositions under the license agreement in 2018 compared to 2017 (2.5%), the number of registered orders under the license agreement in 2019 increased by 22.5%.

As compared to 2018, the activity of foreign rightholders in the area of disposition of ex-

Figure 17
Dynamics of the number of trademarks in respect of which a right of use was granted under a license agreement or a franchise contract in 2015–2019

clusive rights to trademarks under a license agreement/franchise contract decreased. Nevertheless, it is higher than in 2017 (see Tables 1.48 и 1.49 of Annex 1 to the Report).

In 2019, the number of registered dispositions under a license agreement/franchise contract in respect of trademarks of foreign rightholders decreased by 8.8% as compared to 2018 but is 3.2% higher than in 2017. On the contrary, the activity of Russian rightholders is continuing to increase. In 2018, the number of registered dispositions under a license agreement/franchise contract in respect of trademarks of Russian rightholders increased by 122.3% as compared to 2018 (see Figure 18).

Figure 18
Number of dispositions of exclusive right to trademarks under a license agreement/franchise contract depending on entity in 2015–2019

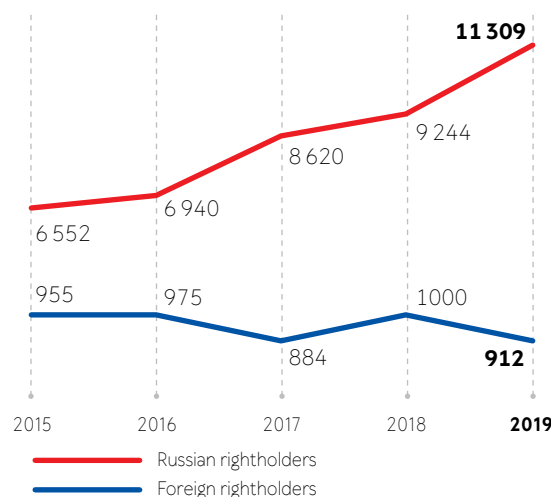

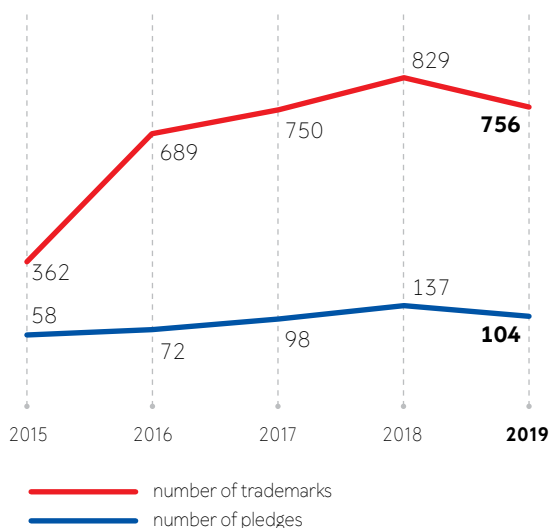

Figure 19
Dynamics of registration of pledge of exclusive right in 2015–2019

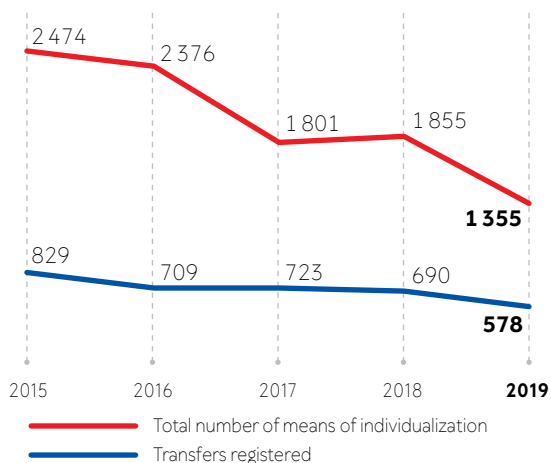

There is a reduction in the number of registered pledges including trademark pledges, in 2018, to the level of 2017 (see Figure 19).

Nevertheless, as compared to the previous period, there is a steady positive trend in the total number of registered dispositions in respect of trademarks under a contract.

As compared to 2018, the number of registered dispositions increased by 16.6%. The number of trademarks in respect of which the dispositions were registered increased by 2.5%.

Figure 20
Dynamics of registration of transfer of exclusive right to trademarks without a contract with a rightholder in 2015–2019

According to the provisions of paragraph 3 of Article 1232 of the Code, the composition of documents submitted for state registration of a contracted disposition of exclusive right may include one application signed by two parties or an application signed by one party with the attached agreement.

In 2019, the increase of receipt of applications signed by two parties to the contract continued.

In 2018, for the purpose of state registration of contracted disposition of exclusive right, 2908 applications were received without attaching any other supporting document, which constituted 9.8% of the total number of considered applications. In absolute terms it is 1023 more than in 2018 and 4.8 times more than in 2016.

The number of registered transfers of exclusive right to means of individualization (trademarks, service marks, appellations of origin) without a contract with a rightholder as well as the number of means of individualization in respect of which the transfers were registered decreased in 2019 as compared to 2015–2018 (see Figure 20).

1.7.3. State registration of contracted disposition of exclusive right to the objects of intellectual property and transfer of exclusive right to computer programs, databases and topographies of integrated circuits (CPs, DBs, TICs) without a contract

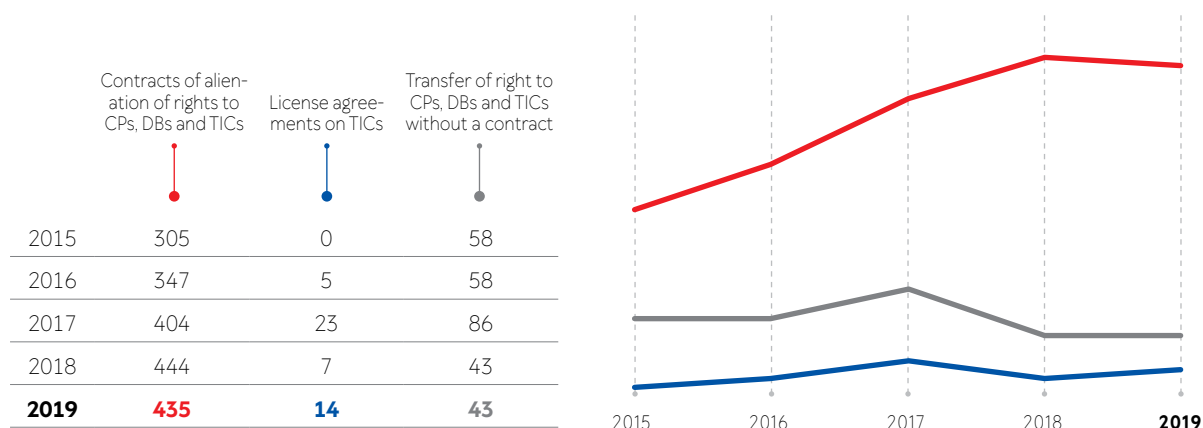

In 2019 the number of applications for registration of dispositions of exclusive right to CPs, DBs and TICs under a contract of alienation was relatively unchanged compared to 2018 (438 in 2018 and 440 in 2019). At the same time it is worth mentioning that the number of objects included in the filed applications increased by 37% as compared to 2018. This is due to the fact that if several objects are included into the same application, the fee for the applicant should be significantly lower.

In the reported period, the number of applications for registration of transfer of exclusive right to CPs, DBs and TICs without a contract increased by 17.6%.

In 2019, in total the number of completely considered applications (with a decision sent to the applicant) increased by 0.8% as compared to 2018.

Figure 21

Number of registered dispositions of exclusive right to computer programs, databases and topographies of integrated circuits under a contract and transfer of exclusive right to the said objects without a contract in 2015–2019

At the same time in 2019 there is a slight decrease of the number of registered alienations of exclusive right to CPs, DBs and TICs by 2.0% as compared to 2018. The number of registrations of transfer of exclusive right to CPs, DBs and TICs without a contract was relatively unchanged.

The number of applications that were withdrawn by applicants or for which state registration was refused, increased by 8.7% (from 23 to 25 applications).

The statistics of registered dispositions of exclusive right to CPs, DBs and TICs under a contract and transfers of exclusive right to the said objects without a contract is given in Table 1.50 of Annex 1 to the Report and in Figure 21.

1.8.

AMENDMENTS TO THE STATE REGISTERS, RENEWAL, CESSATION, RESTORATION OF LEGAL PROTECTION OF OBJECTS OF INTELLECTUAL PROPERTY, OPEN LICENSES, PUBLICATION OF COURT DECISIONS

Trademarks and service marks

Trademark exclusive right renewal

As compared to the previous two years, in the reported year the number of satisfied applications for trademark exclusive right renewal decreased and was the same as in 2016 (see Figure 22). The decrease was caused by the reduction of the number of filed applications. The statistical data is given in Table 1.51 of Annex 1 to the Report.

Figure 22

Dynamics of satisfied applications for trademark exclusive right renewal in 2015–2019

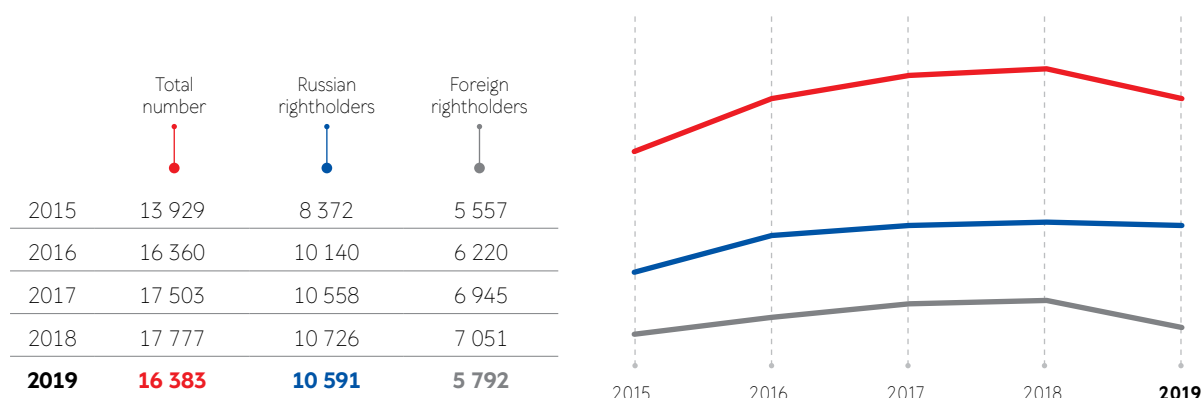

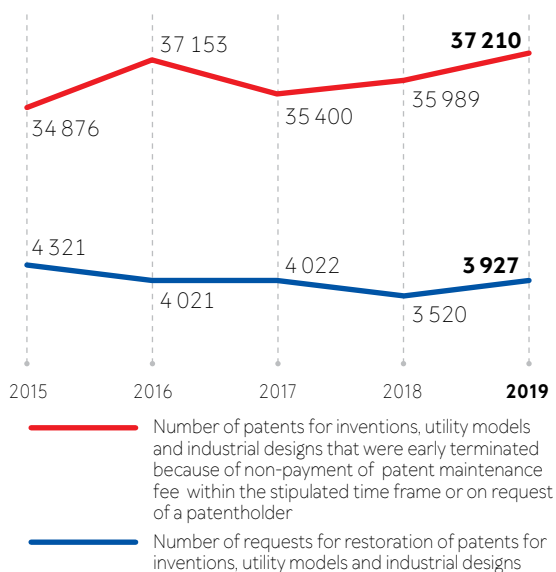

Figure 23
Dynamics of termination and restoration
of legal protection of objects of patent
law in 2015–2019

In 2019, 7 applications for renewal of certificates of exclusive right to AOs (six of them from Russian rightholders and 1 of them from a foreign rightholder) were satisfied.

Amendments to the State Register of Trade-marks and Service Marks of the Russian Federation, to the State Register of Appellations of Origin of the Russian Federation, to the List of Well-Known Trademarks in the Russian Federation, as well as to the certificates

The ratio of satisfied applications filed by Russian rightholders in relation to applications filed by foreign rightholders is 78% and 22% of the total number of filed applications, respectively (see Table 1.52 of Annex 1 to the Report).

The data on early termination of legal protection upon a request of any person due to cessation of juridical entity – rightholder or registration of cessation of citizen's activity as an individual entrepreneur – rightholder is given in Table 1.52 of Annex 1 to the Report.

The data on early termination of legal protection in case of rightholder's waiver of right is given in Table 1.53 of Annex 1 to the Report.

Inventions, utility models, industrial designs

Amendments to the State Registers of Inventions, Utility Models, Industrial Designs of the Russian Federation

In total in 2019, 5,371 requests for changes in the state registers and granted patents were received.

5,168 requests were satisfied. Changes were made to the relevant state registers, and published in the official bulletin of Rospatent.

By the results of 2019, 3,850 changes were made to the State Register of Inventions of the Russian Federation, 844 changes were made to the State Register of Utility Models of the Russian Federation, 474 changes were made to the State Register of Industrial Designs of the Russian Federation.

Renewal, termination, restoration of legal protection of inventions, utility models, industrial designs

The dynamics of the provision of public services for renewal, termination and restoration of legal protection of the objects of the patent law is given in Figures 23 and 24.

As of today, there is a relative stability in respect of the dynamics of the quantitative indicator regarding early termination of patents and its annual value is within the average statistical value for the period of monitoring. That can be explained by the stability of the intellectual property market, in which the rightholder takes into account inefficiency of a technical solution protected by a patent and removes it from economic circulation by terminating payment of patent maintenance fees.

A slight decrease in the dynamics of restoration of patents for objects of patent law is explained by the following.

First of all, it is caused by the changes in the system of charging design patent maintenance fees regarding industrial designs with the fixed date of issue later than January 1, 2015 (the design patent maintenance fee is paid once in five years). This leads to a decrease of the amount of obligatory design patent maintenance fees (as the fees are paid ones in five years but not in one year). Because of this the number of early terminations of patents and, as the result, of their further restorations decreased.

Secondly, the mentioned dynamics is explained by a significant amount of patent restoration fees, especially in the last years of their validity including fees for beneficiaries of social policies (there are no reductions in the fee for this legal action).

For example, the fee for restoration of a patent to an invention in the 18th year of its activity is 46700 rubles which is expensive for most individuals.

Renewal of legal protection of patents in the field of pharmaceuticals, pesticides and agrochemicals mostly relates to activity of non-residents and depends on import substitution policy in the domestic market. Thus, the change of the indicator of renewal of legal protection of inventions and patents certifying the exclusive right in the reported year corresponds to this tendency and its growth will take place with the development of the domestic market.

The data on the renewal of legal protection of industrial designs and patents certifying the exclusive right tends to grow significantly because of the changes to the legislative base that imply changes to design patent renewal terms and prescribe that renewal of a patent is carried every five years of its activity.

Open license

In 2019, 111 applications on the possibility of granting a right to use an invention, utility model or industrial design (open license) were received.

104 applications were published.

The number of applications that were received and published in 2015–2019 was stable. Over the last five years, there has not been a large number of applications on an open license regarding objects of the patent law (see Figure 25).

Publication of court decisions on infringement of exclusive rights to patents

In 2019, 6 applications of patentholders with a request to publish a court decision on infringement of their rights were received.

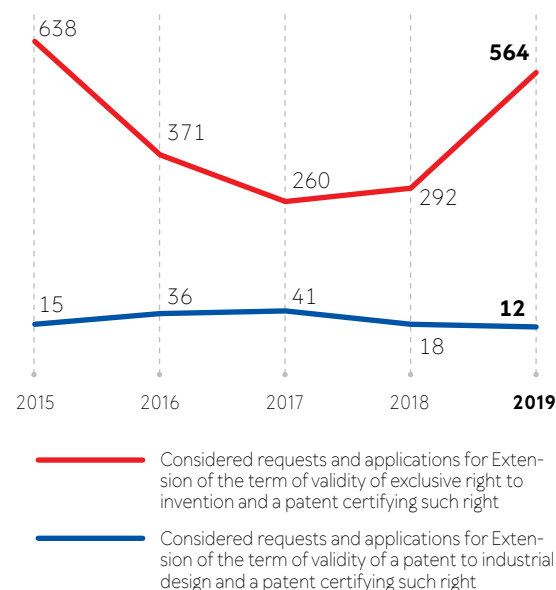

6 court decisions received in 2019 and entered into force were published.

The published court decisions relate to infringement of rights of 5 inventions and 1 industrial design.

Computer programs, databases, topographies of integrated circuits

Amendments to the Registers of Computer Programs, Databases, Topographies of Integrated Circuits

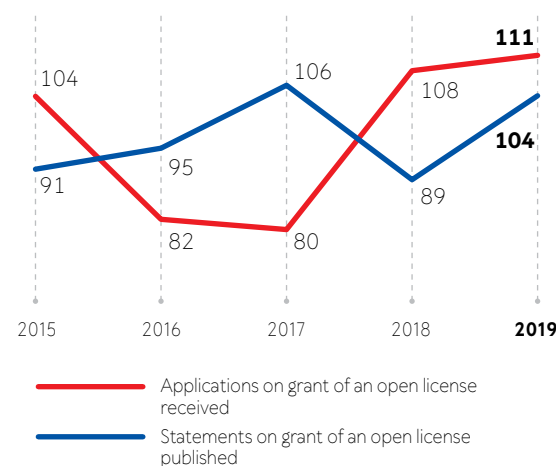

Figure 24
Dynamics of renewal of legal protection of objects of patent law in 2015–2019

In 2019, Rospatent received 1,115 applications for amendments to the Register of Computer Programs, the Register of Databases, and the Register of Topographies of Integrated Circuits which is 29.4% more than was filed in 2017 (862 applications).

The changes to corresponding register were made in respect of 1145 requests, and in respect of 33 requests the changes to corresponding register were refused.

Figure 25
Dynamics of received and published statements on grant of an open license in 2015–2019

1.9.

PROVISION OF PUBLIC SERVICES IN ELECTRONIC FORM

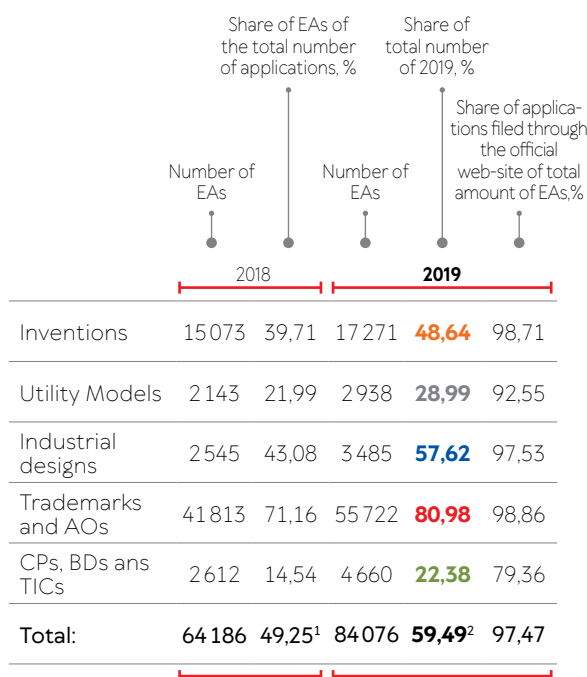

In 2019, the number of applications for public services (hereinafter referred to as requests) submitted to Rospatent in electronic form, increased as compared to 2018 from 70673 to 101470. The maximum increase was recorded in the 4th quarter of 2019—48.4% of total number of applications (38.1% for the same period in 2018). The number of applications filed to Rospatent in total and particularly in electronic form as well as the proportion of electronic applications of the total for all state services is showed in Annex 1 to the Report. The data on the number and the share of electronic applications show that electronic filing is more popular within the state services for which filing at Rospatent official website is provided. Currently, Rospatent official website allows to file applications for registration of all objects of intellectual property except for topographies of integrated circuits. Statistics on the numbers of electronic applications for state registration of the objects of intellectual property is shown in Figure 26. It's worth mentioning that the proportion of requests filed at the official website of the total amount of electronic applications for the mentioned state

services is usually higher than 90%. This indicates the demand for electronic services provided at Rospatent website, the interface of which is developed taking into account the peculiarities of the state services in the sphere of legal protection of intellectual property.

In response to this tendency, Rospatent is planning to continue development of electronic services at its official website and to expand the number of state services that are provided at this website as well as to introduce new services. In 2019, work on developing new Rospatent information system "Single channel interaction of Rospatent with interested parties in the delivery of state services, services provided in accordance with international treatments and agreements, publication of publicly accessible information on the activity in the sphere of registration and legal protection of objects of intellectual property in the format of open data".

It's worth mentioning that there is a many-fold growth in the number of applications filed through the Public Services Portal of the Russian Federation hereinafter referred to as "EPGU", for the state services that are among the most popular and are not provided at Rospatent official website. Relevant data are presented in the Figure 27.

Figure 26
Number of electronic applications (EA) and the share of electronic applications in the total amount of applications for the services most in demand among participants of electronic interaction in 2018–2019

¹ There were 130,335 applications for these state services received in 2018 in total.

² There were 141,330 applications for these state services received in 2019 in total.

The dynamics of electronic filing illustrates the demand for this way of filing from applicants. The increase of the number of electronic requests has been achieved through implementation of the following organizational, technical and information measures taken by Rospatent and FIPS.

1. Development of electronic interaction services

As at the end of 2019, formation and filing applications for state registration of inventions, utility models, industrial designs, trademarks, appellations of origin, computer programs and databases, obtaining information on the status of the proceedings on these applications, delivering documents on the result of the state services and filing pre-trial (extrajudicial) appeals against decisions and acts (inaction) of Rospatent, FIPS and their officials are provided at Rospatent website. State services for the state registration of objects of intellectual property as well as post-registration services are provided via EPGU. In addition to these actions, charging fees for the state services that are provided in electronic form and quality assessment of provision of state services are available via EPGU.

Also, the new version of "Personal Cabinet" service is available since January 14, 2019. Its functionality is supplemented with the following options:

- * filing applications for industrial designs, computer programs and databases directly via the service;
- * filing applications for industrial designs according to the Hague agreement;
- * working on draft applications and viewing filed applications (for applications filed via the service);
- * automatic registration of received correspondence signed with digital signatures concerning applications for inventions and utility models (if they were filed on paper or via PatDoc digital service), trademarks, appellations of origin or for grant of exclusive right to appellations of origin registered earlier (if they were filed on paper) and applications for industrial designs, computer programs and databases that were filed via updated version of service.

Information on conditions and terms of provision of Rospatent state services, including electronic services, is published at Rospatent and FIPS websites and EPGU.

2. In 2019, 8 thematic meetings with applicants were held. These are:

- * 2 meetings on electronic filing of applications for industrial designs, computer programs and databases via personal account. 41 people took part in it and 30 people joined it via videoconferencing;
- * 6 meetings on electronic filing of applications for inventions, utility models, trade-

Figure 27
Filing electronic applications for state services in 2018–2019

	2018	2019	2018	2019
	Number of EAs		Share of EAs, %	
State registration of contracted disposition of exclusive right to invention, utility model, industrial design, trademark, service mark, registered topography of integrated circuit, computer program, database	1754	5444	5,91	15,85
Restoration of a patent for invention, utility model or industrial design	61	132	1,33	2,77
Renewal of the exclusive right to trademark, service mark	2233	5670	12,81	32,56
Amendments to the State Registers of Inventions, Utility models, Industrial designs of the Russian Federation, as well as to patents	153	581	2,30	11,00
Amendments to the State Registers of Trademarks and Service Marks, Appellations of Origin of the Russian Federation, to the List of Well-known Trademarks in the Russian Federation, as well as to certificates	1971	4712	9,49	21,37

marks, appellations of origin or grant of exclusive right to appellations of origin registered earlier via AWS "Registrar". 214 people took part in it and 49 people joined it via videoconferencing.

Also, 5 educational organizations and 2 scientific and technological libraries took part in the meetings via videoconferencing.

3. Training video courses and programs were published at FIPS website.

These are video materials on themes "Filing an application for inventions via AWS "Registrar" (2794 views)" "The example of filing an application for registration of word a trademark" (12,525 views), "The example of filing an application for an appellation of origin" (676 views) and "Filing an application for invention (via PatDoc Service" (6,195 views).

4. FIPS technical support service considers requests from users of the electronic services. The registration and consideration of requests are made on working days. Sending requests is available 24/7 at the email address: helpdesk@rupto.ru. In 2019, 4,971 requests concerning work with electronic services and setting up workplaces were considered.

5. Individual training is delivered in VPTB computer hall.

Any interested person can obtain necessary knowledge and practical experience in preparation of electronic application documents:

- * for grant of a patent for an invention, utility model, industrial design;
- * for registration of a trademark, appellation of origin, grant of an exclusive right to appellation of origin registered earlier;
- * for registration of computer programs and databases.

The training is free and it's conducted by appointment. The number of employees engaged in training was increased.

1.10

CERTIFICATION AND REGISTRATION OF PATENT ATTORNEYS OF THE RUSSIAN FEDERATION

The expansion of the number of patent attorneys of the Russian Federation and development of competitive patent attorneys'

services market in the Russian Federation are priority Rospatent courses of action. A citizen who obtained status of patent attorney as provided for by law and who carries out activities in the sphere of legal protection of the results of intellectual activity and means of individualization, their juridical protection, obtaining exclusive right to the results of intellectual activity and means of individualization and disposition of exclusive right is deemed to be a patent attorney.

Rospatent carries out certification and registration of patent attorneys, issuance of registration certificates to them, as well as control over patent attorneys' compliance with the requirements stipulated by the legislation of the Russian Federation.

1.10.1. Maintaining the Register of patent attorneys of the Russian Federation

As of January 1, 2020, 2,150 patent attorneys were registered in the Register. 46 of them were excluded from the Register due to the circumstances stipulated by Federal Law No. 316-FZ of December 30, 2008 "On Patent Attorneys" hereinafter referred to as the Law No. 316-FZ of December 30, 2008 (these grounds are applying for a public service job or a job at a Rospatent subordinate organization as well as court decision stipulating exclusion a patent attorney from the Register of Patent Attorneys of the Russian Federation hereinafter referred to as the Register.

As of December 31, 2019, the number of acting patent attorneys of the Russian Federation was 2,004 persons.

Long-standing practice of maintaining the Register (from July 1, 1993) illustrates the steady tendency of increase of the number of patent attorneys of the Russian Federation. Nevertheless, some regions show rather small growth of the number of patent attorneys (see Table 1.57 of Annex 1 to the Report) and highly disproportionate distribution among the federal districts (see Table 1.56 of Annex 1 to the Report). This can't satisfy the inventors' demand for accessible and high-quality patent attorneys' services.

Patent attorneys are mainly concentrated in Moscow (1,241) and St. Petersburg (308) – almost three quarters (72%) of the total number of registered patent attorneys of the Russian Federation. In Moscow the number of patent attorneys is four times higher than in St. Petersburg. It's worth mentioning that the number of patent attorneys in the closest regions, namely

Figure 28
Data on distribution of patent attorneys
by federal districts of the Russian Federation
(total for 1993–2019)

	number of patent attor- neys	share of the number of pat- ent attorneys of the total, %
Far Eastern	25	1,2
Volga	158	7,5
Northwestern	333	15,8
North Caucasian	4	0,2
Siberian	68	3,2
Ural	68	3,2
Central	1399	66,5
Southern	49	2,3

in Moscow Region (95 people) and Leningrad Region (8 people) is relatively 13 and 38,5 times smaller than in Moscow and St. Petersburg.

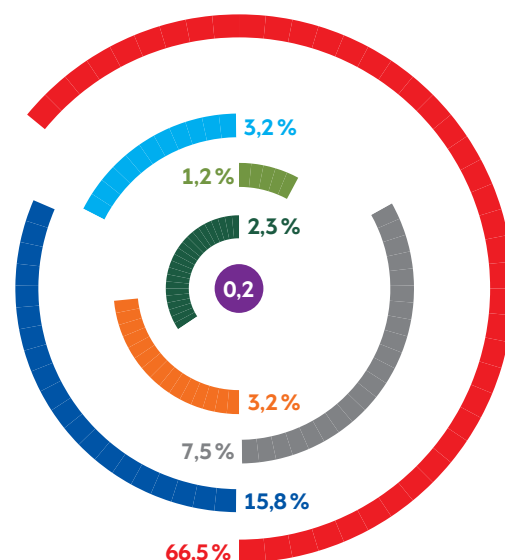

There are no patent attorneys or three or less of them in 49 districts of the Russian Federation (60% of total number of districts). There are no patent attorneys in 22 regions. Also, highly unsatisfactory situation is noted in Far Eastern District (1 patent attorney was registered in Republic of Sakha (Yakutia) and in North Caucasian Federal District (4 patent attorneys). In Siberian Federal District the number of patent attorneys is maintained exclusively by patent attorneys from Novosibirsk and Tomsk Regions (68 patent attorneys).

The information on distribution of patent attorneys among the federal districts (from 1993 to 2019 in total) is illustrated in Figure 28.

In order to provide favorable conditions for passing the procedure of obtaining the status of patent attorney, Rospatent carried out visiting regional exam session for evaluating candidates for certification as patent attorneys in Novosibirsk on the basis of Novosibirsk Division of the Federal Institution of Intellectual Property.

The demand for this system is illustrated by the activity of candidates who filed 29 applications for certification as patent attorneys in 37 specializations which is just a little lower than total amount of candidates who were allowed to participate in exams in 2019.

The distribution of candidates who participated in the visiting exam session is the following:

1 from Novosibirsk Region, 4 from Tomsk Region, 3 from Sverdlovsk Region, 2 from Krasnoyarsk Region and 1 candidate either from Perm Region, Irkutsk Region, Chelyabinsk Region and the Republic of Tatarstan.

23 people in 28 specializations were certified as the result of the visiting exam session.

In 2019, 339 changes to the information on registered patent attorneys contained in the Registry were made upon requests of patent attorneys (in the previous year 291 changes were made) (see Figure 29).

Timely updating the information on patent attorneys in the Registry is the duty of patent attorneys as well as Rospatent function that provides the interested parties with reliable

Figure 29
Dynamics of filing applications for certification in 2013–2019

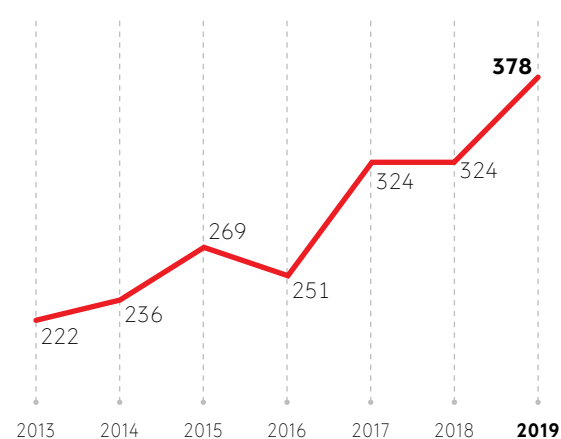

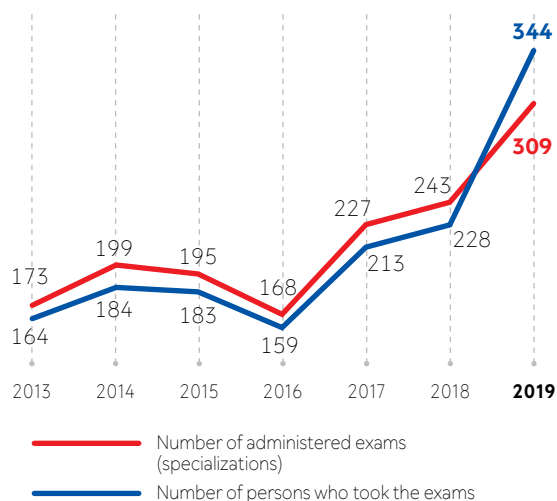

Figure 30
Data on participation in qualification exams in 2013–2019

information on patent attorneys that can be used for searching of high-quality services of a patent attorney.

1.10.2. Activity of Rospatent Qualification Commission for certification of patent attorneys

Activity of Rospatent Qualification Commission on certification of patent attorneys is regulated by Order of the Ministry of Economic Development of the Russian Federation No. 617 of September 29, 2018 registered by the Ministry of Justice of the Russian Federation on December 26, 2016 No. 44962).

The authority of the Qualification Commission relates to i.a. checking patent attorney candidates' documents, preparation of and carrying out exam sessions, taking decisions

in certification or refuse of certification as a patent attorney through qualification exams.

In order to provide for self-study pre-exam training of patent attorney candidates, Rospatent updated the examples of practical and situational tasks related to the written part of the qualification exam in different specializations at Rospatent website in 2019. For the first time, examples of questions for computer testing were published.

The qualification exam for certification of patent attorney candidates and patent attorneys wishing to expand their specialization is conducted in five specializations: "Inventions and utility models", "Industrial designs", "Trademarks and service marks", "Appellations of origin", "Computer programs, databases, topographies of integrated circuits".

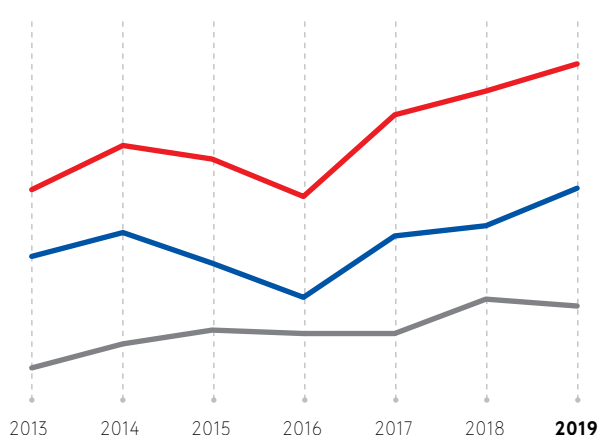

In 2019, Rospatent led three exam sessions on the basis of Federal Institution of Intellectual Property in Moscow: March 11–15, May 20–24, October, 28 – November, 1, and one visiting exam session on basis of Novosibirsk Division of Federal Institution of Intellectual Property on November 6–7.

In 2019, applications for certification as a patent attorney, were filed by 378 candidates for 430 specializations. Dynamics of filing applications for certifying as patent attorneys from 2013 is illustrated in Figure 30. Candidates are allowed to file applications for certifying no more than in two specializations.

As the result of the exam sessions, 309 candidates were certified as patent attorneys in 331 specializations by the decisions of the Qualification Commission (see Figure 31).

Figure 31
Data on the results of certification of patent attorney candidates and patent attorneys wishing to expand their specialization, in 2013–2019

	Took examination	Certified	Certification Refused
2013	164	119	45
2014	192	134	59
2015	183	114	69
2016	159	92	67
2017	213	132	67
2018	228	139	89
2019	247	163	84

52 candidates in 54 specializations were not admitted to participate in the exams by the decisions of Qualification Commission, because as the result of consideration of the documents filed by the candidates lack of compliance with the requirements to patent attorneys provided by parts 2 and 3 of Article 2 and part 13 of Article 6 of the Federal Law of December 30, 2008 No 316-FZ was identified.

79 of 309 candidates in 91 specializations were not able to participate in the exams for a good course.

247 candidates in 271 specializations took the exams.

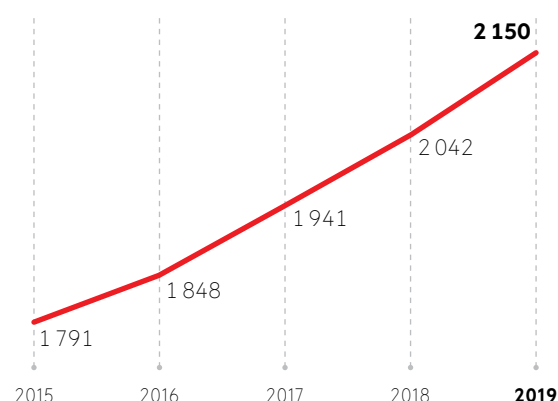

As the result of the exam sessions held in 2019, 163 candidates in 176 specializations were certified as patent attorneys of the Russian Federation by the decisions of Qualification Commission, i.a.:

- * 128 candidates in 139 specializations obtained status of a patent attorney for the first time;
- * 35 candidates who were earlier registered as patent attorneys and wished to expand their activity to new specialization obtained the status in 38 specializations.

Statistics on certification of patent attorneys from 2013 is illustrated in Figure 31.

From the date of registration as a patent attorney in the Registry, a person obtains the status of a patent attorney in a relevant specialization. As of the period up to January 1, 2020, 2150 patent attorneys were registered

Figure 32
Dynamics of registration of patent attorneys in 2007-2019

by Rospatent. 46 of them were excluded from the Registry on the grounds provided by Article 8 of the Federal Law of December 30, 2008 No 316-FZ. Thus, there were 2104 acting patent attorneys as of December 31, 2019 (see Figure 33).

1.10.3. Activity of the Appeals Commission of Rospatent

In the reported period, the Appeals Commission of Rospatent organized 3 meetings—on June 18, 2019, September 2, 2019, and December 24, 2019 at which 24 complaints of patent attorney candidates and patent attorneys wishing to expand their field of activity within the established specialties, against the decisions of the Qualification Commission of

Figure 33
Dynamics of complaints to the Appeals Commission in 2010-2019

	Complaints considered, total	Complaints against the decisions of the Qualification Commission	Complaints against the actions of patent attorneys
2010	26	23	3
2011	25	21	4
2012	21	15	6
2013	15	13	2
2014	15	15	0
2015	14	11	3
2016	27	23	4
2017	30	27	3
2018	31	28	3
2019	24	24	0

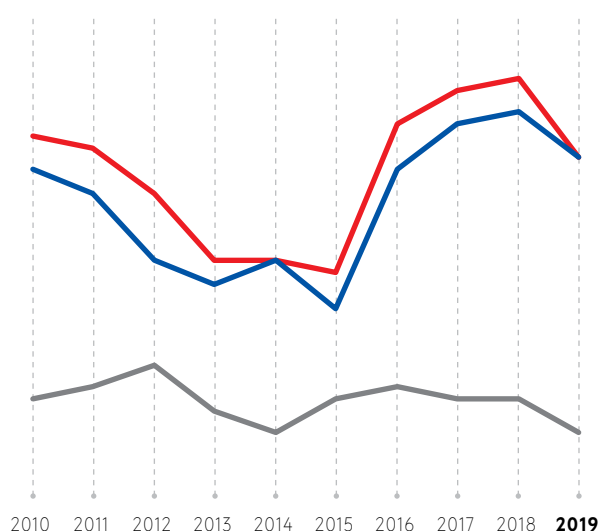

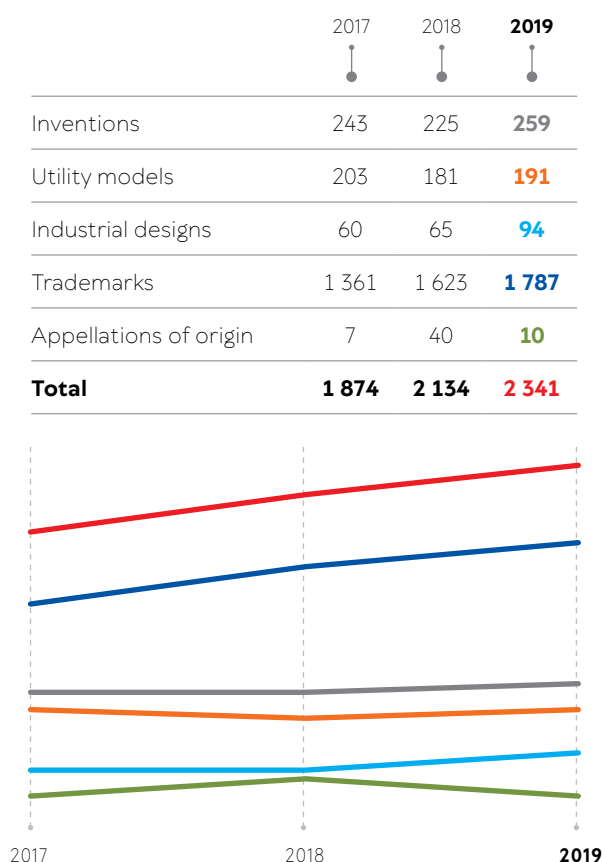

Figure 34
Dynamics of complaints to the Appeals Commission in 2010–2019

Rospatent were considered. This is less than in 2017 and 2018.

Unlike 2017 and 2018, when the vast majority of complaints was filed against the decisions of the Qualification Commission of Rospatent related to specialty “Trademark and Service Marks”, in 2019 only 9 complaints against mentioned decisions were filed while 10 complaints related to specialization “Inventions and Utility Models”. 1 of 20 considered complaints related to specialization “Industrial Designs”.

8 complaints against decisions of the Qualification Commission of Rospatent were satisfied, 12 complaints were denied.

1 of 4 complaints against decisions of the Qualification Commission of Rospatent to refuse admission to qualification exams was satisfied, 3 complaints were denied.

In 2019 no complaints against the actions of patent attorneys were considered.

The number of complaints considered by the Qualification Commission of Rospatent from 2010 to 2019 is illustrated in Figure 33.

1.11.

CONSIDERATION OF ADMINISTRATIVE DISPUTES RELATED TO LEGAL PROTECTION OF THE RESULTS OF INTELLECTUAL ACTIVITY AND MEANS OF INDIVIDUALIZATION

In 2019, Rospatent with the assistance of FIPS considered received appeals and requests aimed at protecting intellectual property rights, as well as requests for recognizing a trademark or a designation used as a trademark as a well-known trademark, which are submitted to Rospatent in accordance with the provisions of the current legislation.

The data on the number of appeals and requests that were received by Rospatent in 2017–2019 and related to the results of intellectual activity and means of individualization are given in Figure 34.

As follows from the data in Figure 34, the number of appeals and requests received by Rospatent increased slightly in 2019 as compared to 2018 (~ by 9.7%) which corresponds to the dynamics of this data in compared periods. Regular dynamics seen from the Figure concerns all types of IP objects.

Measures to provide for decrease in terms of consideration of appeals related to the means of individualization as well as objects of patent law taken by Rospatent are adequate to the dynamics of receives appeals as well as demand of the market.

Taking into account the increase in the number of appeals and requests received by Rospatent, the average time limit of consideration of such appeals and requests in 2019 constituted 4 months regarding means of individualization and 4,8 months regarding patent law objects. Data on the average time limit of consideration of appeals in 2018 and 2019 is given in Figure 35.

Data on the number of appeals and requests received by Rospatent and decisions taken thereon by Rospatent is given in Figure 36.

It follows from Figure 36 that the total number of decisions of Rospatent taken on the results of consideration of appeals and requests increased as compared to 2018 by ~ 43,9%.

In 2019, 1,254 decisions on appeals to grant of legal protection were taken, while in 2018 there were taken 928 of them. Thus, there is a dynamics of growth in the number of solved

disputes in 2019 as compared with 2018 (increase by 35.1%).

There is an increase in the number of considered appeals regarding all types of IP objects. In 2019, 918 decisions were taken on appeals to grant of legal protection, that is 49.5% higher as compared with 2018.

Such a tendency is determined by Rospatent activity to reduce the time limits of consideration of disputes.

The number of decisions taken by Rospatent with distribution by objects of intellectual property is given in Table 1.58 of Annex 1 to the Report.

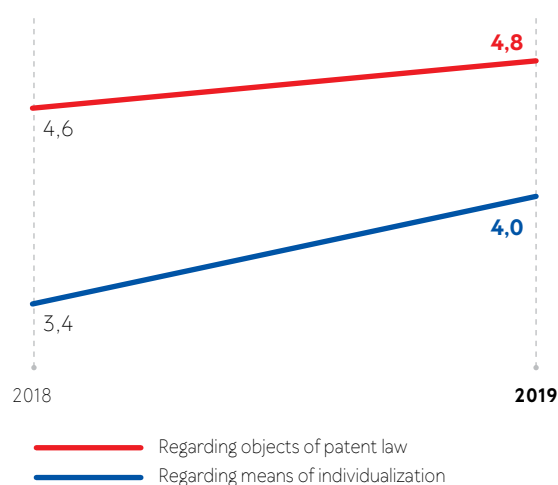

Table 1.59 of Annex 1 to the Report illustrates the results of consideration of appeals regarding different types of the results of intellectual activity and means of individualization.

In 2019, 2,242 decisions were taken by the results of consideration of appeals and requests, of which 1111 appeals/ requests were satisfied, 1131 were not satisfied.

In respect of means of individualization, in 2019 the number of both satisfied (865 compared to 692 in 2018) and unsatisfied (827 as compared to 517 in 2018) appeals increased.

In 2019, in respect of all objects of patent law there was an increase in both satisfied and unsatisfied appeals: 154 appeals related to inventions (85 appeals in 2018) and 99 appeals related to utility models (87 objections in 2018) were not satisfied. A similar trend is observed in respect of industrial designs: 41

Figure 35
Average terms for considering appeals and requests (average time limits for considering appeals and requests)

appeals (25 appeals in 2018) were not satisfied in 2019.

The data on the number of considered disputes related to well-known trademarks is given in Table 1.60 of Annex 1 to the Report.

In 2019, the number of decisions taken upon consideration of requests to recognize a trademark or designation used as a trademark, as well-known trademark in the Russian Federation, increased from 16 to 24 decisions. Also, 1 decision on request against the grant of legal protection to well-known trademark in the Russian Federation was taken in 2019.

The data on the activity of the Appeals Board based on the provided analysis is shown in Table 1.61 of Annex 1 to the Report.

ACTIVITIES OF ROSPATENT

on control and supervision in the sphere of legal protection and utilization of the results of intellectual activity of civil, military and dual use created with the federal budget funding and in the sphere of legal protection of the State interests in the course of economic and civil turnover of the R&D results of military, special and dual use

A. Solonovich,

Head, Department of
Control, Supervision
and Legal Protection
of State Interests

INTRODUCTION

One of the main functions of Rospatent is the state control and supervision in the sphere of protection and utilization of the results of intellectual activity created with the federal budget funding as well as legal protection of the State interests in the course of economic and civil law turnover of the R&D results of military, special and dual use.

A socially significant goal of control and supervision in the established sphere of activity is the improvement of efficiency of R&Ds conducted with the federal budget funding in part of creation of the results of intellectual activity with a worldwide novelty, their legal protection and involvement in economic and civil law turnover in the interests of economic development of the Russian Federation.

In 2019, in the framework of implementation of the Action plan ("Roadmap") on introduction of the "regulatory guillotine" mechanism adopted by the Prime Minister of the Russian Federation D. Medvedev dated May 29, 2019 No. 4714p-P36, Rospatent prepared the following drafts:

- * Decree of the Government of the Russian Federation on recognition as no longer in force normative legal acts of the Russian Federation contained compulsory requirements which are evaluated by Rospatent in the course of control (supervision) in the established sphere of activity;
- * new structure of normative regulation in the sphere of legal protection and utilization of the results of intellectual activity created with the federal budget funding.

In order to develop the legal and regulatory framework for the defense of interests of the Russian Federation in respect of the R&D results, the work on preparation and conclusion of intergovernmental agreements with foreign states on the mutual protection of the results of intellectual activity and enforcement of intellectual property in the course of bilateral military-technical cooperation.

The section of the Report presents in more detail the main results of Rospatent's activities on control and supervision in the established sphere as well as on legal protection of the interests of the State.

2.1.

CONTROL AND SUPERVISION IN THE SPHERE OF LEGAL PROTECTION AND UTILIZATION OF THE RESULTS OF INTELLECTUAL ACTIVITY OF CIVIL, MILITARY AND DUAL USE CREATED WITH THE FEDERAL BUDGET FUNDING

2.1.1. Audit of the state customers and organizations – state contractors on R&Ds with the federal budget funding

2.1.1.1. General information on the results of audits

In 2019, Rospatent carried out audits of state customers and organizations – state contractors on R&Ds with the purpose of control and supervision in the sphere of legal protection and utilization of the results of intellectual activity of civil, military and dual use created with the federal budget funding (hereinafter – “established sphere of activities”). The audits were carried out in accordance with the competences set forth in the Statute adopted by Decree of the Government of the Russian Federation dated March 21, 2012 No. 218 “On the Federal Service for intellectual Property”.

Control and supervision in the established sphere of activities is performed by Rospatent in accordance with Decrees of the Government of the Russian Federation dated January 26, 2012 No. 9 “On control and supervision in the sphere of legal protection and utilization of the results of intellectual activity of civil use created with the federal budget funding, and control and supervision in the established sphere of activities in respect of state customers and organizations – state contractors on R&Ds” and April 26, 2012 No. 402 “On control and supervision in the sphere of legal protection and utilization of the results of intellectual activity of military, special and dual use created with the federal budget funding, as well as control and supervision in the established sphere of activities in respect of state customers and organizations – state contractors on R&Ds”.

In 2019 Rospatent carried out 67 audits regarding state customers and organizations – state contractors on R&Ds, including:

42 scheduled on-site audits carried out in accordance with the Plan of the scheduled audits of legal entities;

2 unscheduled on-site audits in the sphere of civil, military, special and dual use follow-

ing the request of the Prosecutor General's Office of the Russian Federation;

23 unscheduled document audits carried out upon expiry of the period given to comply with orders of Rospatent and to eliminate the detected violations.

The scheduled on-site audits were carried out in four federal districts of the Russian Federation (see Table 2.1 of Annex 2 of the Report).

The audited legal entities, including unscheduled audits, are the following (see Table 2.2 of Annex 2 of the Report): joint stock companies (JSC) – 38, Institutions of higher education – 9, Federal State Budgetary Science Institutions of the Russian Academy of Science – 5, Ministries – 4, Federal State Unitary Enterprises – 3, Federal State Budget Institutions – 3, Federal State Budgetary Science Institutions – 2, Federal Services – 1, State Corporations – 1, Federal State Institutions – 1.

2.1.1.2. Results of audits of state customers

In 2019, Rospatent carried out the scheduled audits of state customers (the Ministry of Industry and Trade of the Russian Federation, the State Corporation “Roscosmos”, the Federal Guard Service (information with limited access)).

The audit of the Ministry of Industry and Trade of the Russian Federation (Department of Pharmaceutical and Medical Industry Development and Department of Radio Electronic Industry) resulted in the following.

Under 50 state contracts of civil use (budget funding – 7705,42 million rubles) 163 protectable results of intellectual activity were created, in respect of which the measures on ensuring legal protection were taken.

Under 41 state contracts on R&Ds of military, special and dual use (budget funding – 3668 million rubles) 134 protectable results of intellectual activity were created, in respect of which the measures on ensuring legal protection were taken.

The audit of the State Corporation “Roscosmos” resulted in the following.

Under 19 state contracts on R&Ds of military, special and dual use (budget funding – 45370,97 million rubles) 148 protectable results of intellectual activity were created, in respect of which the measures on ensuring legal protection were taken.

The information on the results of audits of state customers carried out in 2019 presented in Table 2.3 of Annex 2 to the Report.

Rospatent considered internal normative legal acts regulating the activities of state customers on management of the rights of the Russian Federation to the results of intellectual activity. The analysis of the documents showed the following.

The State Corporation "Roscosmos" and the Ministry of Industry and Trade of the Russian Federation has a number of shortcomings in organization of work on management of the rights of the Russian Federation with respect to conducting activities on registration of rights of the Russian Federation to the results of intellectual activity, which were used or created under state contracts, and disposal of such rights. The work is provided for by the Rules on management of rights of the Russian Federation to the results of intellectual activity of civil, military, special and dual use by state customers adopted by Decree of the Government of the Russian Federation of March 22, 2012 No. 233 (hereinafter – the Rules).

The strategic documents of the Ministry of Industry and Trade of the Russian Federation (Department of Radio Electronic Industry) do not reflect the goals of managing the rights to the results of intellectual activity, the requirements to the created and used results of intellectual activity and the measures aimed to achieve worldwide novelty and prior art of technical solutions, which are the basis for created technologies and products.

The work on legal protection of the created results of intellectual activity is limited mostly to recognition of all the information contained in the developed design and technological documentation as a know-how (the Ministry of Industry and Trade of the Russian Federation) or recognition of the developed technical documentation as a scientific work (the State Corporation "Roscosmos").

As a result of the audit of state customers the violations of the requirements of the legislation of the Russian Federation in the established sphere of activities were detected in relation to:

- * checking of applications for granting a patent for invention or utility model created in the Russian Federation in order to determine whether there is information constituting a state secret (the Ministry of Industry and Trade of the Russian Federation);

- * ambiguity in designation of rightholder(s) in respect of the created results of intellectual activity in the concluded state contracts on R&Ds (the State Corporation "Roscosmos");
- * carrying out activities on registration of the rights of the Russian Federation to the results of intellectual activity created in the process of implementation of state contracts, which establish that the rights to the results of intellectual activity are owned by the Russian Federation or by the Russian Federation jointly with contractor (the Ministry of Industry and Trade of the Russian Federation, the State Corporation "Roscosmos");
- * carrying out the state inventory of the results of intellectual activity (the Ministry of Industry and Trade of the Russian Federation, the State Corporation "Roscosmos").

The consideration and analysis of the reporting documents (reports on patent researches) under a number of state contracts showed that in the course of conducting R&Ds the results of intellectual activity were received, which could be legally protected. Yet the State Corporation "Roscosmos" has not carried out the activities on registration of rights to these results.

Moreover, the State Corporation "Roscosmos" has not sent the decision on the legal protection of the result of intellectual activity (in response to notification on the creation of a protectable result of intellectual activity) to organizations – contractors.

As a result of the audit, the violations of provisions of the concluded state contracts were also detected in relation to:

- * giving the notification on the creation of the protectable results of intellectual activity by organization – contractor to a state customer (under state contracts of the Ministry of Industry and Trade of the Russian Federation, the State Corporation "Roscosmos");
- * sending the decision on the form of legal protection of the received result and its use under the state contract by the state customer (the Ministry of Industry and Trade of the Russian Federation and the State Corporation "Roscosmos") to organization – contractor;
- * sending the reports on patent researches provided for under the state contract by organization – contractor to a state customer;
- * conducting patent researches by organizations – contractors (under the state contracts of the Ministry of Industry and Trade of the Russian Federation);

- * implementing the responsibility to carry out the state inventory of the results of intellectual activity (under the state contracts of the Ministry of Industry and Trade of the Russian Federation and the State Corporation "Roscosmos").

Following the results of audits of state customers, the acts of audits were drawn up and the orders on elimination of detected violations were issued.

2.1.1.3. Results of audits of organizations – contractors

In the course of audits of organizations – contractors 544 state contracts (agreements) on R&Ds of civil, military, special and dual use were considered.

567 violations of the compulsory requirements of the legislation in the established sphere of activities were detected

The selection of the state contracts (agreements) for the audit was made mainly according to the criterion of expected effectiveness of R&Ds in terms of the results of intellectual activity.

Rospatent carried out 30 scheduled on-site audits of organizations – contractors on R&Ds of military, special and dual use.

During the mentioned audits Rospatent considered 205 state contracts with the total amount of funding of 264,524 billion rubles from the federal budget.

The organizations – contractors registered the rights to 76 inventions, 28 utility models, 3 industrial designs, 44 computer programs, 5 databases, 51 topographies of integrated circuits, 310 know-hows in respect to 518 results of intellectual activity under the state contracts considered by Rospatent.

The audits resulted in 29 orders on elimination of detected violations issued to organizations – contractors.

The following violations were detected.

- * In respect of securing the rights of 13 created results of intellectual activity (7 inventions, 1 utility model, 5 computer programs) in 5 organizations. The securing of rights to the results of intellectual activity was made with the violation of the legislation of the Russian Federation and conditions of state contracts.

- * In respect of providing a state customer with information necessary for state inventory – 131 results of intellectual activity in 19 organizations.
- * Violations of conditions of state contracts in terms of notification of a state customer by a contractor on the creation of the protected results of intellectual activity – in 8 organizations.
- * Violations of the introduction of trade secret regime in respect of the created results of intellectual activity – in 6 organizations.
- * Violations related to an agreement with a state customer on the use of the prior intellectual property owned by the contractor or third person – in 4 organizations.
- * Violations related to remuneration for creation of the protected result of intellectual activity – in 7 organizations.
- * Violations related to registration of an exclusive right to the created computer programs and databases (ensuring of acquisition of such right from the third person for its transfer to the Russian Federation) – in 5 organizations.
- * Violations related to conclusion of license agreements between organizations and state customers on the right to use the results of intellectual activity, the rights to which are owned by the Russian Federation, during the implementation of contracts in the framework of military-technical cooperation and international economic activities in respect of the controlled production – in 3 organizations.
- * Violations of provisions of the concluded license agreements on the right to use the results of intellectual activity, the rights to which are owned by the Russian Federation – in 3 organizations.
- * Violations related to allocation of rights to the results of intellectual activity in agreements with co-contractor – in 3 organizations.
- * Violations related to patent researches:
 - patent researches were not conducted – in 12 organizations;
 - reports on patent researches do not comply with GOST R15.011–96 – in 3 organizations.

Besides, Rospatent detected the facts of non-action on registration of rights to 15 results of intellectual activity (8 inventions, 3 computer programs, 2 databases, 1 utility model, 1 know-how) in accordance with the established procedure – in 7 organizations.

In 2019, Rospatent carried out 33 unscheduled on-site audits of organizations – contractors on R&Ds of civil use.

During the mentioned audits, Rospatent considered 339 state contracts (agreements) with the total amount of funding of 29,872 billion rubles from the federal budget.

The organizations – contractors registered the rights to 253 inventions, 89 utility models, 2 industrial designs, 133 computer programs, 6 databases, 8 topographies of integrated circuits, 150 know-hows in respect to 641 results of intellectual activity under the state contracts considered by Rospatent.

The following violations were detected.

- * In respect of providing information for the state inventory (its updating) of the received results of intellectual activity: the information on 402 of 641 created results of intellectual activity was not entered into the Unified state information system for inventory of R&Ds of civil use. It represents 65,5% of total number of the results of intellectual activity created under the audited R&Ds – in 20 organizations.
- * In respect of notification of the state customer by organization – contractor on early termination of the legal protection (validity of a patent of the Russian Federation, obtained in the name of organization – contractor) on 17 results of intellectual activity – in 7 organizations.
- * In respect of misappropriation of rights to 27 results of intellectual activity (4,2% of total number of the results of intellectual activity created under audited R&Ds) – in 5 organizations.
- * In respect of non-fulfillment of conditions for granting subsidies in terms of achieving performance indicators of R&Ds on creation of protectable results of intellectual activity, its legal protection and involvement of rights to such results in economic and civil law turnover for creation of innovation products – in 6 organizations.
- * In respect of realization of the right of author to remuneration for creation of the service results of intellectual activity.

The audits carried out in 2019 showed that the level of practical use of the results of intellectual activity remains low.

The compliance with the terms of contracts was not ensured in terms of introduction into production (including conclusion of license agreement with industrial partners) in respect of 239 created results of intellectual activity.

Therefore, the ultimate goal of R&Ds was not achieved, the rights to the created results of intellectual activity were not involved in the economic and civil law turnover.

One of the reasons for not taking actions to conclude license agreements is that industrial partners are short of capacity and equipment for delivery of respective products.

These circumstances are a prerequisite for the necessary adjustment of the procedure for granting subsidies on conducting R&Ds in terms of attracting extrabudgetary funds of industrial partners.

In 2019, 18 administrative offence reports were issued to 11 organizations – contractors, who did not follow the orders of Rospatent on elimination of detected violations and did not provide the documents on its fulfillment in due time.

As a result, 11 organizations – contractors (including executive officers of the organizations – contractors) were brought to administrative liability in accordance with part 1 of Article 19.5 and Article 19.7 of the Administrative Offence Code of the Russian Federation in the form of administrative fines for a total amount of 80,3 thousands rubles.

In the result of implementation of control and supervision activities Rospatent took the necessary measures to end violations of the legislation of the Russian Federation in the established sphere of activities and to:

- * carry out the state inventory of the results of intellectual activity;
- * ensure legal protection of the results of intellectual activity;
- * registration of rights to the results of intellectual activity in accordance with the legislation and terms of the state contracts (agreements);
- * pay the author's remunerations;
- * introduce a trade secret regime in respect of the created results of intellectual activity in accordance with the established procedure.

2.2.

LEGAL PROTECTION OF THE STATE INTERESTS IN THE COURSE OF ECONOMIC AND CIVIL LAW TURNOVER OF THE R&D RESULTS OF MILITARY, SPECIAL AND DUAL USE

2.2.1. Improvement of normative legal regulation

Based on the Action plan ("Roadmap") on implementation of "regulatory guillotine" mechanism adopted by the Prime Minister of the Russian Federation D. Medvedev on May 29, 2019 No. 4714p-P36, Rospatent prepared the following drafts:

- * Decree of the Government of the Russian Federation on recognition as no longer in force normative legal acts of the Russian Federation which contain mandatory requirements which are evaluated by Rospatent in the course of control (supervision) in the established sphere of activity;
- * new structure of normative regulation in the sphere of legal protection and utilization of the objects for IP protection created with the federal budget funding.

Rospatent has also prepared proposals on specifying the cases of registration of an exclusive right to the result of intellectual activity created under state contracts on R&Ds, exclusively in the name of the Russian Federation, jointly in the name of the Russian Federation and organization – contractor of R&D, and in the name of third person, as well as on making amendments to the Civil Code of the Russian Federation.

The following orders of Rospatent were issued:

- * of December 20, 2019 No. 212 "On adoption of the form of checklist (list of control questions) applied in the course of federal state control (supervision) in the sphere of legal protection and utilization of the results of intellectual activity created with the federal budget funding";
- * of December 20, 2019 No. 213 "On adoption of the Program for 2020 on prevention of violations of the mandatory requirements in the sphere of legal protection and utilization of the results of intellectual activity of civil, military, special and dual use created with the federal budget funding".

2.2.2. Maintenance by the Federal Service for Intellectual Property of the Unified registry of the military, special and dual use, with the ownership of its rights by the Russian Federation

Rospatent continued the work on maintaining the Unified registry in accordance with

Decrees of the Government of the Russian Federation dated February 26, 2002 No. 131 "On the state inventory of the R&D results of military, special and dual use" and dated March 21, 2012 No. 218 "On the Federal Service for Intellectual Property".

The information on the number of the R&D results of military, special and dual use, registered in the Unified registry (hereinafter – "inventory object"), is shown in the Table 2.4 of Annex 2 to the Report and the dynamics of their registration is reflected in the chart.

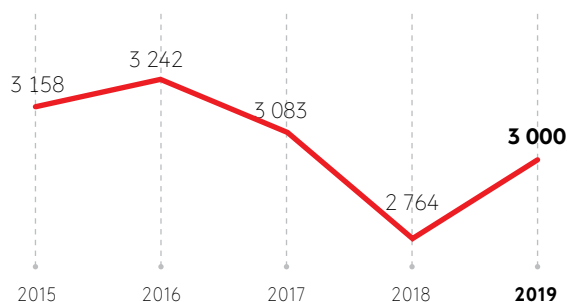

As of December 31, 2019 the Unified registry contains 38 096 objects, including 3000 objects entered in 2019, to which registration certificate was issued alongside with assigning a unique registry number to each inventory object.

In 2019, 6 results of intellectual activity transferred to the foreign customers and used for the purposes, which are not related to the state needs under 6 civil law contracts, were registered in the Rospatent's section of the Unified registry. In total, 723 results, the rights to which are involved in the civil law turnover under 524 contracts, are registered in this section as of December 31, 2019.

2.2.3. Ensuring measures on inventory of the rights to the results of scientific and technical activity

The representatives of Rospatent completed work on 25 inventories with the signing of relevant acts in order to ensure methodological support and control over the compliance with the legislation in the process of inventory in organizations of military-industrial complex and organizations which carried out works related to ensuring federal state needs in the field of maintaining defense capabilities and security of the Russian Federation. The work

Figure
Overall dynamics of registration of the results of intellectual activity in the Unified registry

was carried out in the course of performance of functions on the legal protection of the state's interests in the process of economic and civil law turnover of the R&D results of military, special and dual use and in accordance with the requirements of Decree of the Government of the Russian Federation of January 14, 2002 No. 7 "On the procedure for inventory and valuation of the rights to the results of scientific and technical activity".

In total, in 2019, the representatives of Rospatent took part in the work of 160 working inventory committees on the enterprises of military-industrial complex.

2.2.4. Ensuring measures on support of license contracts on granting the state rights to the use of the results of intellectual activity

In accordance with Decree of the Government of the Russian Federation dated March 22, 2012 No. 233 (as amended by Decree of the Government of the Russian Federation of August 31, 2016 No. 866) the obligations were performed which are provided for by the terms of license contracts concluded by the FGBU "FAPRID", in particular by concluding additional agreements and acts amending or terminating the obligations of the parties upon agreement with state customers.

For the period (since the adoption of Decree of the Government of the Russian Federation of August 31, 2016 No. 866 till December 31, 2019) the FGBU "FAPRID" received 555 requests from organizations – licensees.

305 requests were considered. Following the results of consideration, the respective additional agreements were drafted and sent to the following state customers for approval:

- * to the Ministry of Defense of the Russian Federation – 260 drafts of additional agreements (approved without comments);
- * to the Ministry of Industry and Trade of the Russian Federation – 15 drafts of additional agreements (approved without comments);
- * to the Ministry of Civil Defence, Emergencies and Disaster Relief of the Russian Federation – 19 drafts of additional agreements (18 of them were approved);
- * to the Federal Security Service – 2 drafts of additional agreements (approved without comments);
- * to the State Corporation "Rosatom" – 8 drafts of additional agreements (approved without comments);
- * to the Ministry of Internal Affairs of the Russian Federation – 1 draft of additional agreement (denied in approval);

- * 231 requests were considered and excluded from the total number of received requests on various grounds (signing of the act of performing the obligations and closing license contracts, absence of grounds for conclusion of additional agreements, sending to state customers of sets of documents for conclusion of a new license contract, organizations – licensees are refused to conclude additional agreements by a court decision, etc.).

With regard to 19 requests from organizations – licensees the work is ongoing.

During 2019, the FGBU "FAPRID" received 36 requests from organizations – licensees with the sets of documents for conclusion of additional agreements to the earlier concluded contracts.

Following the results of consideration of the requests by the FGBU "FAPRID":

- * 35 drafts of additional agreements were sent to the Ministry of Defense of the Russian Federation for approval, 55 drafts were approved without comments (taking into account 20 drafts sent to the state customer earlier);
- * 1 draft of additional agreement was sent to the Ministry of Civil Defence, Emergencies and Disaster Relief of the Russian Federation, which is yet not approved by the state customer.

In 2019, the participation of FGBU "FAPRID" was ensured in 151 court hearings in defense of the interests of the Russian Federation in the framework of judicial activities on the enforcement of the rights of the Russian Federation to the results of intellectual activity, created in the process of R&D of military, special and dual use funded by the federal budget, the right to use of which is granted by state customers to organizations – developer and producers of products of military use under license contracts.

During 2019, 48 claims were sent to licensees amounting to:

- * 3 301 680.88 US dollars;
- * 555 970.61 euros;
- * 11 150 409.57 rubles.

2.2.5. Maintenance of patents and applications for obtaining exclusive rights to the results of intellectual activity in the Russian Federation and abroad

During the reported period, FGBU "FAPRID" maintained 23 earlier filed international PCT applications.

4 foreign patents were obtained (Israel – 2, the European Patent Office – 1, India – 1).

As of December 31, 2019, the number of maintained patents was 164.

2.2.6. Carrying out activities on conclusion and implementation of intergovernmental agreements on the mutual protection of intellectual property in the course of bilateral military-technical cooperation

Rospatent sent to the Ministry of Foreign Affairs of the Russian Federation and the Federal Service for Military-Technical Cooperation for transfer to foreign partners:

- * draft intergovernmental agreements – 4;
- * comments on 5 drafts and counter-proposals of intergovernmental agreements;
- * requests on readiness to sign intergovernmental agreements – 3;
- * requests on readiness to discuss intergovernmental agreements – 3.

5 consultations on conclusion of intergovernmental agreements were held with the competent authorities of the foreign states.

The representatives of Rospatent took part in the meeting of the Coordination Council of the Interstate Commission for Military-Economic Cooperation of the Collective Security Treaty Organization on the mutual protection of rights to intellectual property obtained and used in the course of military-economic cooperation in the framework of the Collective Security Treaty Organization, which was held in Moscow on December 10–12, 2019.

As a result of the meeting, the following documents were prepared and approved by the decisions of the Interstate Commission for Military-Economic Cooperation of the Collective Security Treaty Organization:

- * Regulation on consideration of requests made by the contract (agreement) parties in respect of alleged violation of rights to the results of intellectual activity received and (or) used in the course of military-economic cooperation of the member states of the Collective Security Treaty Organization;
- * Procedure for organization of information interaction between the national parts of the Coordination Council of the Interstate Commission for Military-Economic Cooperation of the Collective Security Treaty Organization on the mutual protection of rights to intellectual property obtained and used in the course of military-economic cooperation in the framework of the Col-

lective Security Treaty Organization, on exchange of experience in respect of ensuring efficient protection and enforcement of the rights to the results of intellectual activity;

- * Amendments to the Methodological recommendations on inclusion in contracts (agreements) of provisions related to ensuring legal protection and terms of use of the results of intellectual activity received and used in the course of military-economic cooperation in the framework of the Collective Security Treaty Organization.

Within the work on preparation and approval of draft Regulations on working groups on implementation of the concluded intergovernmental agreements on the mutual protection of the results of intellectual activity and enforcement of intellectual property in the course of bilateral military-technical cooperation, the information about the signing of Regulation on establishment of the joint Working group on the implementation of the Agreement between the Government of the Russian Federation and the Government of the Lao People's Democratic Republic on mutual protection of intellectual property in the course of bilateral military-technical cooperation of December 16, 2015, as well as comments on the counter-proposal of the Regulation were sent to the Ministry of Foreign Affairs of the Russian Federation.

Rospatent considered 26 drafts of intergovernmental agreements in the sphere of scientific-technical, military-technical and other types of cooperation prepared by the federal executive authorities, in respect of allocation of rights to the results of intellectual activity, legal protection and use of such results. The necessary recommendations were given.

Rospatent considered 7 drafts of normative legal acts prepared by the federal executive authorities, in respect of allocation of rights to the results of intellectual activity, legal protection and use of such results. The necessary suggestions and comments were given.

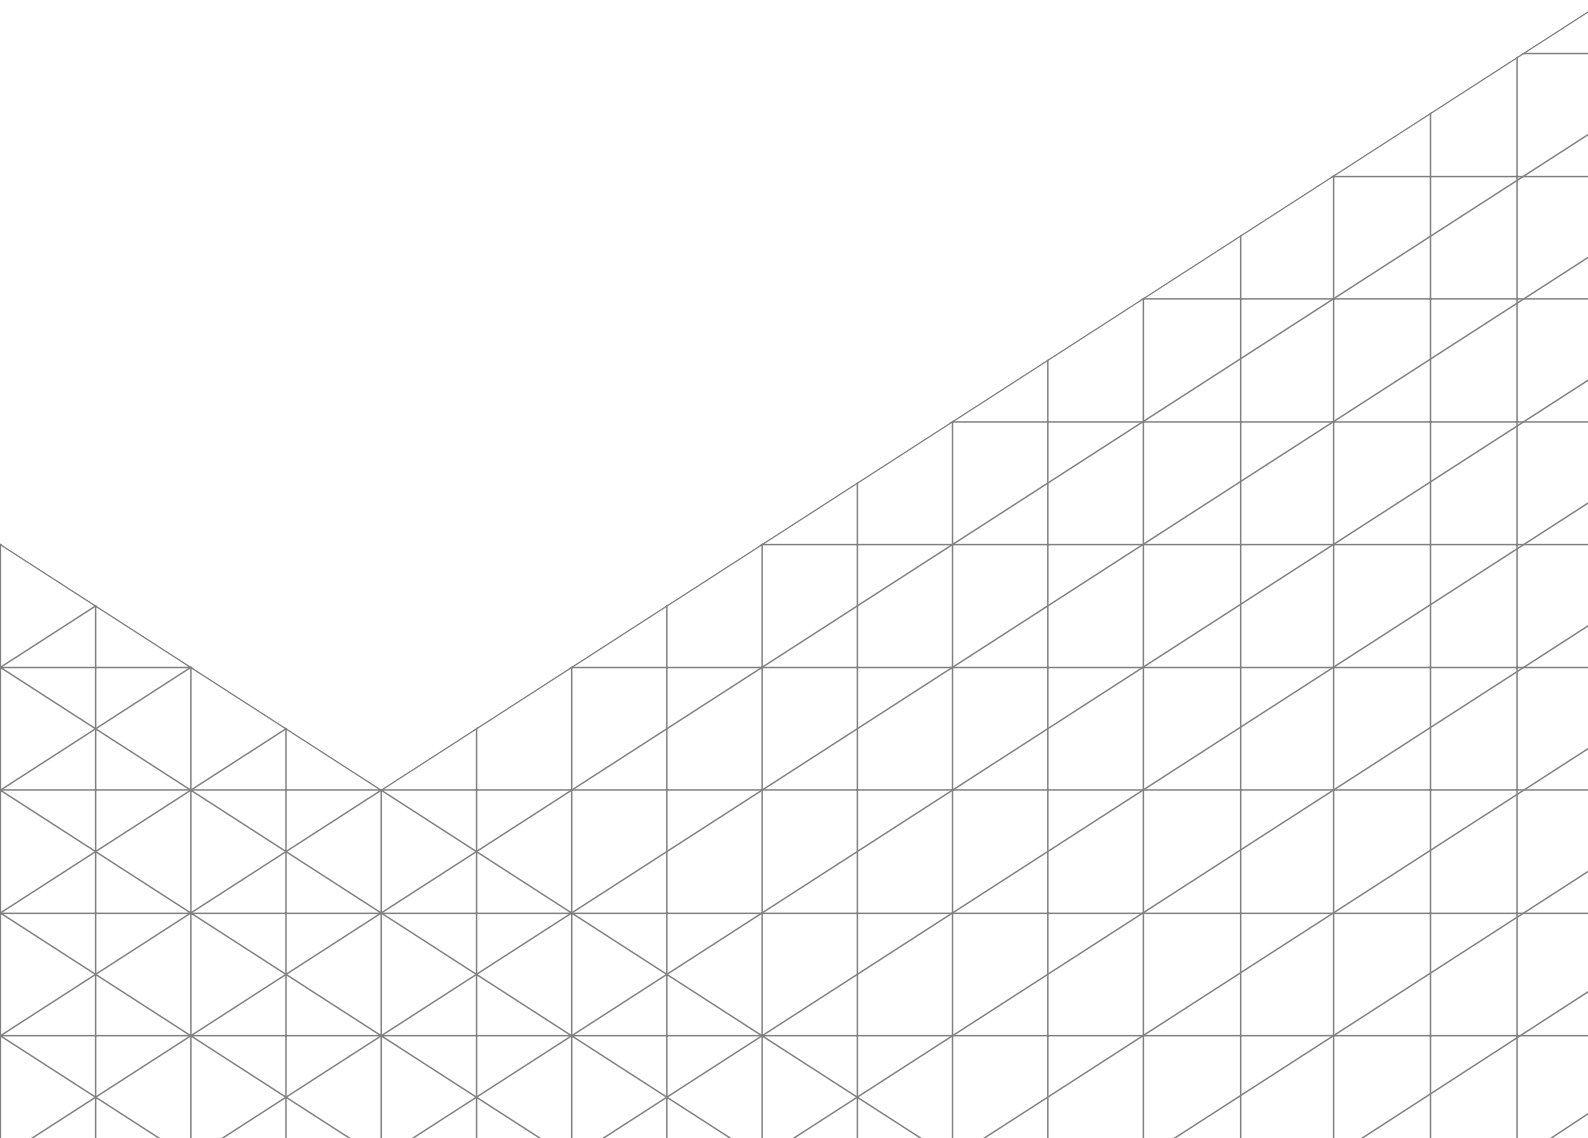

As a result of the round table held with participation of the representatives of the People's Republic of China within the XXIII International Conference of Rospatent, the Russian and Chinese parties reached understanding on a number of issues related to enforcement of intellectual property in the course of bilateral military-technical cooperation.

Moreover, 24 agreements prepared by other authorities of the Russian Federation were considered and approved within the competence.

INTERACTION OF ROSPATENT

with the federal executive, judicial
and other authorities; interaction of
Rospatent with the regions of the
Russian Federation

**L. Kiriya,**

Deputy Head

INTRODUCTION

One of the most important objectives of Rospatent is interaction with the federal executive, judicial and other authorities, as well as with regions of the Russian Federation.

Interaction between Rospatent and the federal executive and judicial authorities is regulated by bilateral agreements.

In 2019 new agreements on interaction between the Federal Customs Service and the Federal Service for Intellectual Property (June 6, 2019), as well as between the Federal Service for Intellectual Property and the Federal Agency for State Property Management (June 7, 2019) were concluded.

Rospatent concluded 20 agreements on interaction with the federal executive authorities, the Accounts Chamber of the Russian Federation and the Intellectual Property Court of the Russian Federation.

The agreements with the federal executive authorities are designed to ensure fulfillment of their and Rospatent tasks.

Rospatent provides the information contained in national registries of registered items of intellectual property. This information is required to comply with the legislation of the Russian Federation on intellectual property and protection of intellectual property rights.

Rospatent provides methodological and information support on the issues within its competence. Rospatent also carries out researches in terms of concluded agreements.

Rospatent considers requests from the federal executive authorities, public prosecution, and judicial authorities on the civil circulation of intellectual property and exclusive rights enforcement.

In total, in 2019 the Federal Institute of Industrial Property (FIPS) fulfilled 3519 requests from the federal executive authorities, public prosecution, and judicial authorities.

Rospatent deems that interaction with the federal executive authorities can be improved by communication development using modern information technologies.

3.1.

INTERACTION OF ROSPATENT WITH THE FEDERAL EXECUTIVE AUTHORITIES.

Upon requests from the federal executive authorities, Rospatent provides explanations within its competence, information from national registries, carries out researches to identify a degree of resemblance between designations used in civil circulation and protected means of identification and utility models.

Information on the number of requests and the origin of the information is provided in Table 3.1 of Annex 4 to the Report.

In 2019, the following tendency was observed:

- * decrease of requests from the Federal Bailiff Service;
- * increase of requests from the Ministry of Economic Development of the Russian Federation, the Ministry of Internal Affairs of the Russian Federation, the Federal Customs Service, the Federal Tax Service of Russia, the courts.

3.2.

INTERACTION OF ROSPATENT WITH JUDICIAL AUTHORITIES

Staff members of the Department of judicial representation represent Rospatent and FIPS in judicial authorities. The Department takes part in consideration of disputes in arbitration courts, courts of general jurisdiction and controls the enforcement of judicial acts and temporal measures imposed on items of intellectual property.

The Department of judicial representation analyzes and summarizes judicial practice, prepares analytical material on application of the law in the field of protection of results of intellectual activity and means of identification.

According to the data provided in Tables 3.2 and 3.3 of Annex 3 to the Report, Moscow courts together with Rospatent have considered 406 legal cases that challenged Rospatent decisions from January to December 2019. According to the data provided in Tables 3.2 and 3.3 of Annex 3 to the Report the number of legal cases considered that challenged Ro-

spatent decisions on means of identification was 286 and on objects of patent law – 120.

The indicated difference in the number of disputed decisions of Rospatent is due to the large number of decisions taken in relation to means of individualization in relation to the similar decisions taken by Rospatent in relation to the objects of the patent law.

According to the data provided in Tables 3.2 and 3.3 of Annex 3 to the Report, in 2018, Rospatent conducted 1558 decisions based on the results of the consideration of objections, of which 1212 – in relation to means of individualization and 346 in relation to the objects of the patent law.

In 2019, Rospatent made 2242 decisions based on the results of the consideration of objections, of which 1739 – in relation to means of identification and 503 – in relation to the objects of the patent law respectively.

Thus, in comparison with 2018, the number of decisions taken by Rospatent based on the results of consideration of objections significantly increased.

At the same time, in 2019, the number of disputed decisions of Rospatent in the court slightly increased.

In 2019, the court invalidated 68 decisions of Rospatent based on the results of consideration of objections in relation to means of individualization. It is 3,9% of the total number of decisions of Rospatent based on the results of the consideration of objections in relation to indicated items of intellectual property. In relation to items of intellectual property, the court invalidated 17 decisions. It is 3,4% of the total number of such decisions taken by Rospatent based on the results of consideration of objections.

These numbers demonstrate the high quality of decisions made by Rospatent.

Speaking about the canceled decisions of Rospatent, it should be noted that invalidated decisions of Rospatent, as a rule, are not related to incorrect application of the rules of law by Rospatent or violation of the procedure for considering applications and objections, but due to other circumstances.

In some cases, decisions of Rospatent were invalidated on the basis of new pieces of evidence presented to the court that were not the subject of consideration in Rospatent.

In other cases, the decisions of Rospatent were invalidated on the basis of the judicial examination declaring that the documents submitted to Rospatent were fabricated.

One of the reasons for the cancellations of decisions of Rospatent was the fact that the parties managed to reach an agreement at the trial, for example, by receiving a letter of consent from the right holder allowing to register the trademark. Such agreement according to Plenum № 50 of the Supreme Arbitration Court of the Russian Federation dated 18 of June 2014 "Conciliation of Parties during Arbitration Proceedings" serves as a basis for cancelation of decision, if no violations of law when Rospatent accepted this agreement took place.

In connection with the above mentioned, in 2019, 23 decisions of Rospatent with respect to means of individualization and 4 decisions with respect to objects of patent law were invalidated on grounds not related to the incorrect application by Rospatent of the norms of the current legislation.

In its turn, due to the incorrect application by Rospatent of the norms of the current legislation and violation of processing applications and objections, only 58 decisions of Rospatent were cancelled, including:

- * 45 decisions of Rospatent on means of individualization, which is 2.6% of the total number of decisions taken by Rospatent following the results of objection consideration with respect to the means of individualization;
- * 13 decisions of Rospatent on patent rights, which is 2.6% of the total number of decisions taken by Rospatent following the results of objection consideration with respect to patent rights.

In addition, in courts (Intellectual Property Court, Arbitration Court of the City of Moscow) the decisions (action/inaction) of Rospatent are also contested. Most of the cases are the disputes regarding appealing against refusals to register an exclusive right to a contract (without a contract) in relation to the results of intellectual activity and means of individualization. According to the data given in table 3.4 of Annex 3 to the Report, the number of such court cases reviewed is 104, 94 of which relate to means of individualization and 10 to the objects of patent law.

Apart from participating in cases in which the decisions (action/inaction) are contested, Rospatent is regularly involved in the cases,

which include disputes regarding infringement of exclusive rights, the establishment of authorship (patent holder) of an invention, utility model or industrial design, as well as repudiation (termination) of contracts. Such cases are under the jurisdiction of Arbitration courts and General courts located both in Moscow and in other constituent entities of the Russian Federation (see table 3.5 of Annex 3 to the Report).

While analyzing the judicial practice of cases involving Rospatent in 2019, one cannot ignore a large number of cases of early termination of the legal protection of trademarks due to non-use. Rospatent is involved as a third party that does not assert independent claims regarding the subject of the dispute. The data on the number of cases of this category are shown in Table 3.6 of Annex 3 to the Report.

3.3.

COOPERATION AND INTERACTION OF ROSPATENT WITH THE REGIONS OF THE RUSSIAN FEDERATION

In 2019, 2 Agreements were concluded between Rospatent and the Governments of the Leningrad and Penza Regions. Due to the expiration, the Agreement with the Government of the Khabarovsk region was renegotiated.

Based on the results of 2019, Rospatent interacts in the framework of cooperation agreements with 61 governments (administrations) of the regions of the Russian Federation (See Table 3.7 of Annex 3 to the Report).

In 2019, Rospatent together with FIPS continued working towards implementation of provisions of the Memorandum of Understanding between Rospatent and the World Intellectual Property Organization (WIPO) on the establishment of Technology and Innovation Support Centers (TISC) in the Russian Federation. As a result:

- * 17 cooperation agreements, including basic provisions on the organization of TISC activities of the 1st level were concluded (11 were renegotiated);
- * 4 trilateral agreements on the establishment of TISC of the 2nd level, to which FIPS, TISC of the 1st level, TISC of the 2nd level are the parties, were signed (2 were renegotiated);
- * 1 trilateral agreement on the establishment of TISC of the 3rd level, to which FIPS, TISC

of the 1st level, TISC of the 3rd level are the parties, was signed;

In order to provide information on TISC activities, free access to the databases of FIPS was granted.

In order to provide an opportunity of online filing of TISC applications for the objects for IP rights protection (inventions, utility models, trademarks and service marks, appellations of origin, software and databases) and of receipt of the digital signature key certificate, 15 additional agreements were signed. Within the framework of an additional agreement for the contract on the establishment of TISC, in 2019 TISC issued 36 digital signature verification keys.

The draft of the TISC Development Concept for 2019–2024 was adopted.

The “TISC Map”, containing detailed information on the state of the TISC network for the period of 2019 was updated. Based on the monitoring data on the performance of regional TISCs, general rating on TISC efficiency was formed. Also, rating by federal districts and rating on the efficiency of TISCs of the 1st and 2nd levels, of universities, and libraries were prepared. 15 best TISCs were identified.

On May 30–31, 2019 the VII Congress of TISCs on the basis of Yaroslav-the-Wise Novgorod State University in Veliky Novgorod was organized and held. 93 TISCs together with heads of regional authorities and economic entities from 47 constituent entities of the Russian Federation, as well as representatives from the Republic of Belarus and the Republic of Uzbekistan participated in the Congress. During 5 sessions of the congress, namely, strategic, regional, image-building, youth-educational and business one, 41 speakers made reports. Within the framework of the Congress, the exhibition called “From Idea to Technical Solution” was demonstrated. During the exhibition, the inventions of the students of the Yaroslav-the-Wise Novgorod State University, as well as of the enterprises of the Novgorod Region and children’s technology parks were presented. For the first time, special events were organized, including the WIPO National Training Seminar for TISCs “Use of Information in the Public Domain for Economic Development” and the public lecture for state and municipal employees “Intellectual Property in the Digital Economy”, delivered by Ivan Bliznets, the former Rector of the Russian State Academy of Intellectual Property in compliance with the order of

Valentina Matvienko, the Speaker of the Federation Council of the Federal Assembly of the Russian Federation, on the organization of training for state and municipal employees. The proposals presented during the work of the Congress were included in the draft resolution of the Congress.

In 2019, 2 seminars on patenting and commercialization of R&D, electronic filing of applications were organized and held. A working meeting on intellectual property management (the total number of participants of the events was 100 people) was organized, as well as individual training workshops that were held as part of the TISC project to train staff on work in the FIPS databases and electronic filing of applications for industrial property objects.

In order to implement paragraph 1.2.1 of Protocol No. 2 dated 26 of June 2018 of the Solemn Joint Meeting of the Scientific and Technical Council of Rospatent and FIPS together with the expanded Presidium of the All-Russian Society of Inventors and Rationalizers dedicated to the Day of the Inventor and Rationalizer to raise awareness of the youth regarding the opportunities and their rights in the field of intellectual property, “Intellectual Hash Track”, the All-Russian contest of educational projects among the TISCs of the Russian Federation was established.

In order to provide information and to raise awareness about the activities of the TISC network, information brochure for the interested offices and individuals was issued. Also, information brochure entitled “Best Practices of the Technology and Innovation Support Centers” with the top 15 TISCs that took the leading position according to the results of their activities in 2018 was released.

In order to grant access to technical information, the regional TISCs provided details on their project activities in the following areas: youth initiatives, business initiatives, educational projects. The accumulated data will be published on the TISC page of the FIPS website.

In the framework of cooperation with WIPO, proposals were made regarding the project on creating a certification system for TISC staff on their service delivery skills. Necessary details on the establishment of an online service platform for exchange of information regarding effective data collection, analysis, and management, received from the TISC network of the Russian Federation were provided.

In 2019, FIPS representatives made presentations at the following events organized for TISCs by WIPO: National Training Seminar in Uzbekistan (March 26–27, 2019, Tashkent); National Training Seminar in Kyrgyzstan (June 18–19, 2019, Bishkek); Interregional Meeting on Integrating TISCs into National and Institutional Strategic Frameworks of China (September 2–3, 2019, Hangzhou) in cooperation with the TISC representative of Kazan Energy University; National training seminar in the Republic of Kazakhstan (November 26–29, 2019, Nur-Sultan).

Within the framework of the spring/fall sessions of WIPO Academy, 218 staff members of the regional TISC network took part in the training sessions.

As of 31 December 2019, TISCs operate on the premises of 170 economic entities from 69 regions in 8 federal districts of the Russian Federation.

Information is available in Figure 1.

The full list of economic entities providing services in the areas of TISC activities is posted on the official FIPS website (www.fips.ru) in the section “Technology and Innovation Support Centers (TISCs).”

By the main types of economic activity, the economic entities, who provide services in the field of TISCs are distributed according to the data shown in Figure 2.

During 2019, in accordance with the Agreements on TISC establishment, sets of Russian patent documentation were sent on optical DVD-ROMs (total of 917 discs) to the Centers. The information products and materials prepared by VPTB Division, such as “Guidebook on VPTB collections and Internet resources”, electronic catalog of patent and legal literature “Legal protection of intellectual property: reporting and foreign publications”, “Internet navigator on patent and information resources”, lists of recommended bibliography for regions, etc. were published on the FIPS website.

During 2019, Rospatent hosted 29 thematic meetings on challenges that intellectual property field faces (see paragraph 6.3 of the present Report). In the events organized by 11 TISCs, total number of 2,428 people participated, including 527 people who took part via videoconference. The most active participants from TISCs were GPNTB SO RAN (Novosibirsk) that took part in 12 meetings, Peter the Great Saint Petersburg Polytechnic University that participated in 8 meetings, and Belgorod State National Research University – 5 meetings.

In 2019, the coefficient of inventive activity (K_{ia}) in Russia was 1.59, excluding utility models (UM), and 2.25, including utility models (see tables 3.9 and 3.10 of Annex 3 to the Report). Following the results of the analysis, 10 regions with the maximum coefficient of inventive activity were identified (Figure 3).

By analyzing 10 selected regions by the coefficient of inventive activity, excluding utility models, it can be noted that only Saint Petersburg and the Republic of Tatarstan demonstrate an increase in the coefficient over the past three years.

In 2019, Rospatent started to actively implement the Recommendations on managing the rights to the results of intellectual activity and means of individualization in the regions of the Russian Federation through the conclusion of trilateral agreements between the Ministry of Economic Development of the Russian Fed-

eration, Rospatent and the authorities of the regions of the Russian Federation.

The subject of a tripartite agreement is the interaction of the parties in the process of introduction of Recommendations into the practical activities of the constituent entity of the Russian Federation as well as the assistance in intellectual property development.

In 2019, agreements were concluded with the Republics of Tatarstan and Karachay-Cherkess, as well as with the Tambov, Vologda, Voronezh, Omsk and Ulyanovsk regions.

In 2019, FIPS participated in the organization of 148 conferences, seminars, and round tables in 40 regions of the Russian Federation (the data on subjects, timing, and locations are presented in Table 3.8 of Annex 3 to the Report).

3.4.

CONSIDERATION OF REQUESTS FROM CITIZENS AND LEGAL ENTITIES IN ROSPATENT AND ITS SUBORDINATE ORGANIZATIONS

In 2019, in Rospatent and its subordinate bodies, a total number of 1,911 requests were considered, 1,489 of which were received from citizens, 422 were received from legal entities. 841 of these requests were received via e-mail and through the website of Rospatent. Requests made by citizens prevail and constitute 78% of the total number of the requests considered. The total number of requests as compared to 2018 increased by 13.5%.

Table 3.11 of Annex 3 to the Report gives the information on the distribution of the number of received requests by addressee and geography of the requests.

The majority of requests came from the Central, South, Volga, Northwestern, Siberian and Ural regions. The number of requests from these regions amounts to 64.6% of the total number of requests from the Russian Federation. In 2019, the number of e- requests from the Internet without an exact address increased and constituted 31.4% of the total number of requests received from the Russian Federation.

The distribution of the number of requests received from the citizens of the Russian Federation by federal districts is shown in table 3.12 of Annex 3 to the Report.

The data for 2015–2019 on the distribution of the number of requests received by Rospatent and its subordinate organizations on the issues raised in the requests are given in Table 3.13 of Annex 3 to the Report.

The majority of the requests (66%) concerned the activities of Rospatent related to the provision of public services.

As compared to the previous year, the number of the requests related to the examination of applications and its results, processing

of applications, titles of protection, legal issues, as well as the issues related to assistance to inventors in patenting, increased.

Significant part of the requests (34%) received during the reported period did not directly relate to the provision of public services. In such requests, the issues related to the assistance in processing and filing of applications, introduction and use of the objects of patent law, remuneration payment, provision of financial and other assistance to inventors during patenting and implementation of innovations, infringement, and restoration of rights together with other issues were raised.

88% of the total number of the considered requests were applications, 11%—complaints and 1%—proposals.

During 2019, the proportion of justified complaints did not go beyond the indicators set by the State task.

During the reported period, the share of justified complaints constituted:

- * with respect to the objects of the patent law – 1.5 complaints per ten thousand applications;
- * with respect to the means of individualization – 1.4 complaints per ten thousand applications;
- * with respect to the state registration of computer programs, databases, and TICs – 1.9 complaints per ten thousand applications.

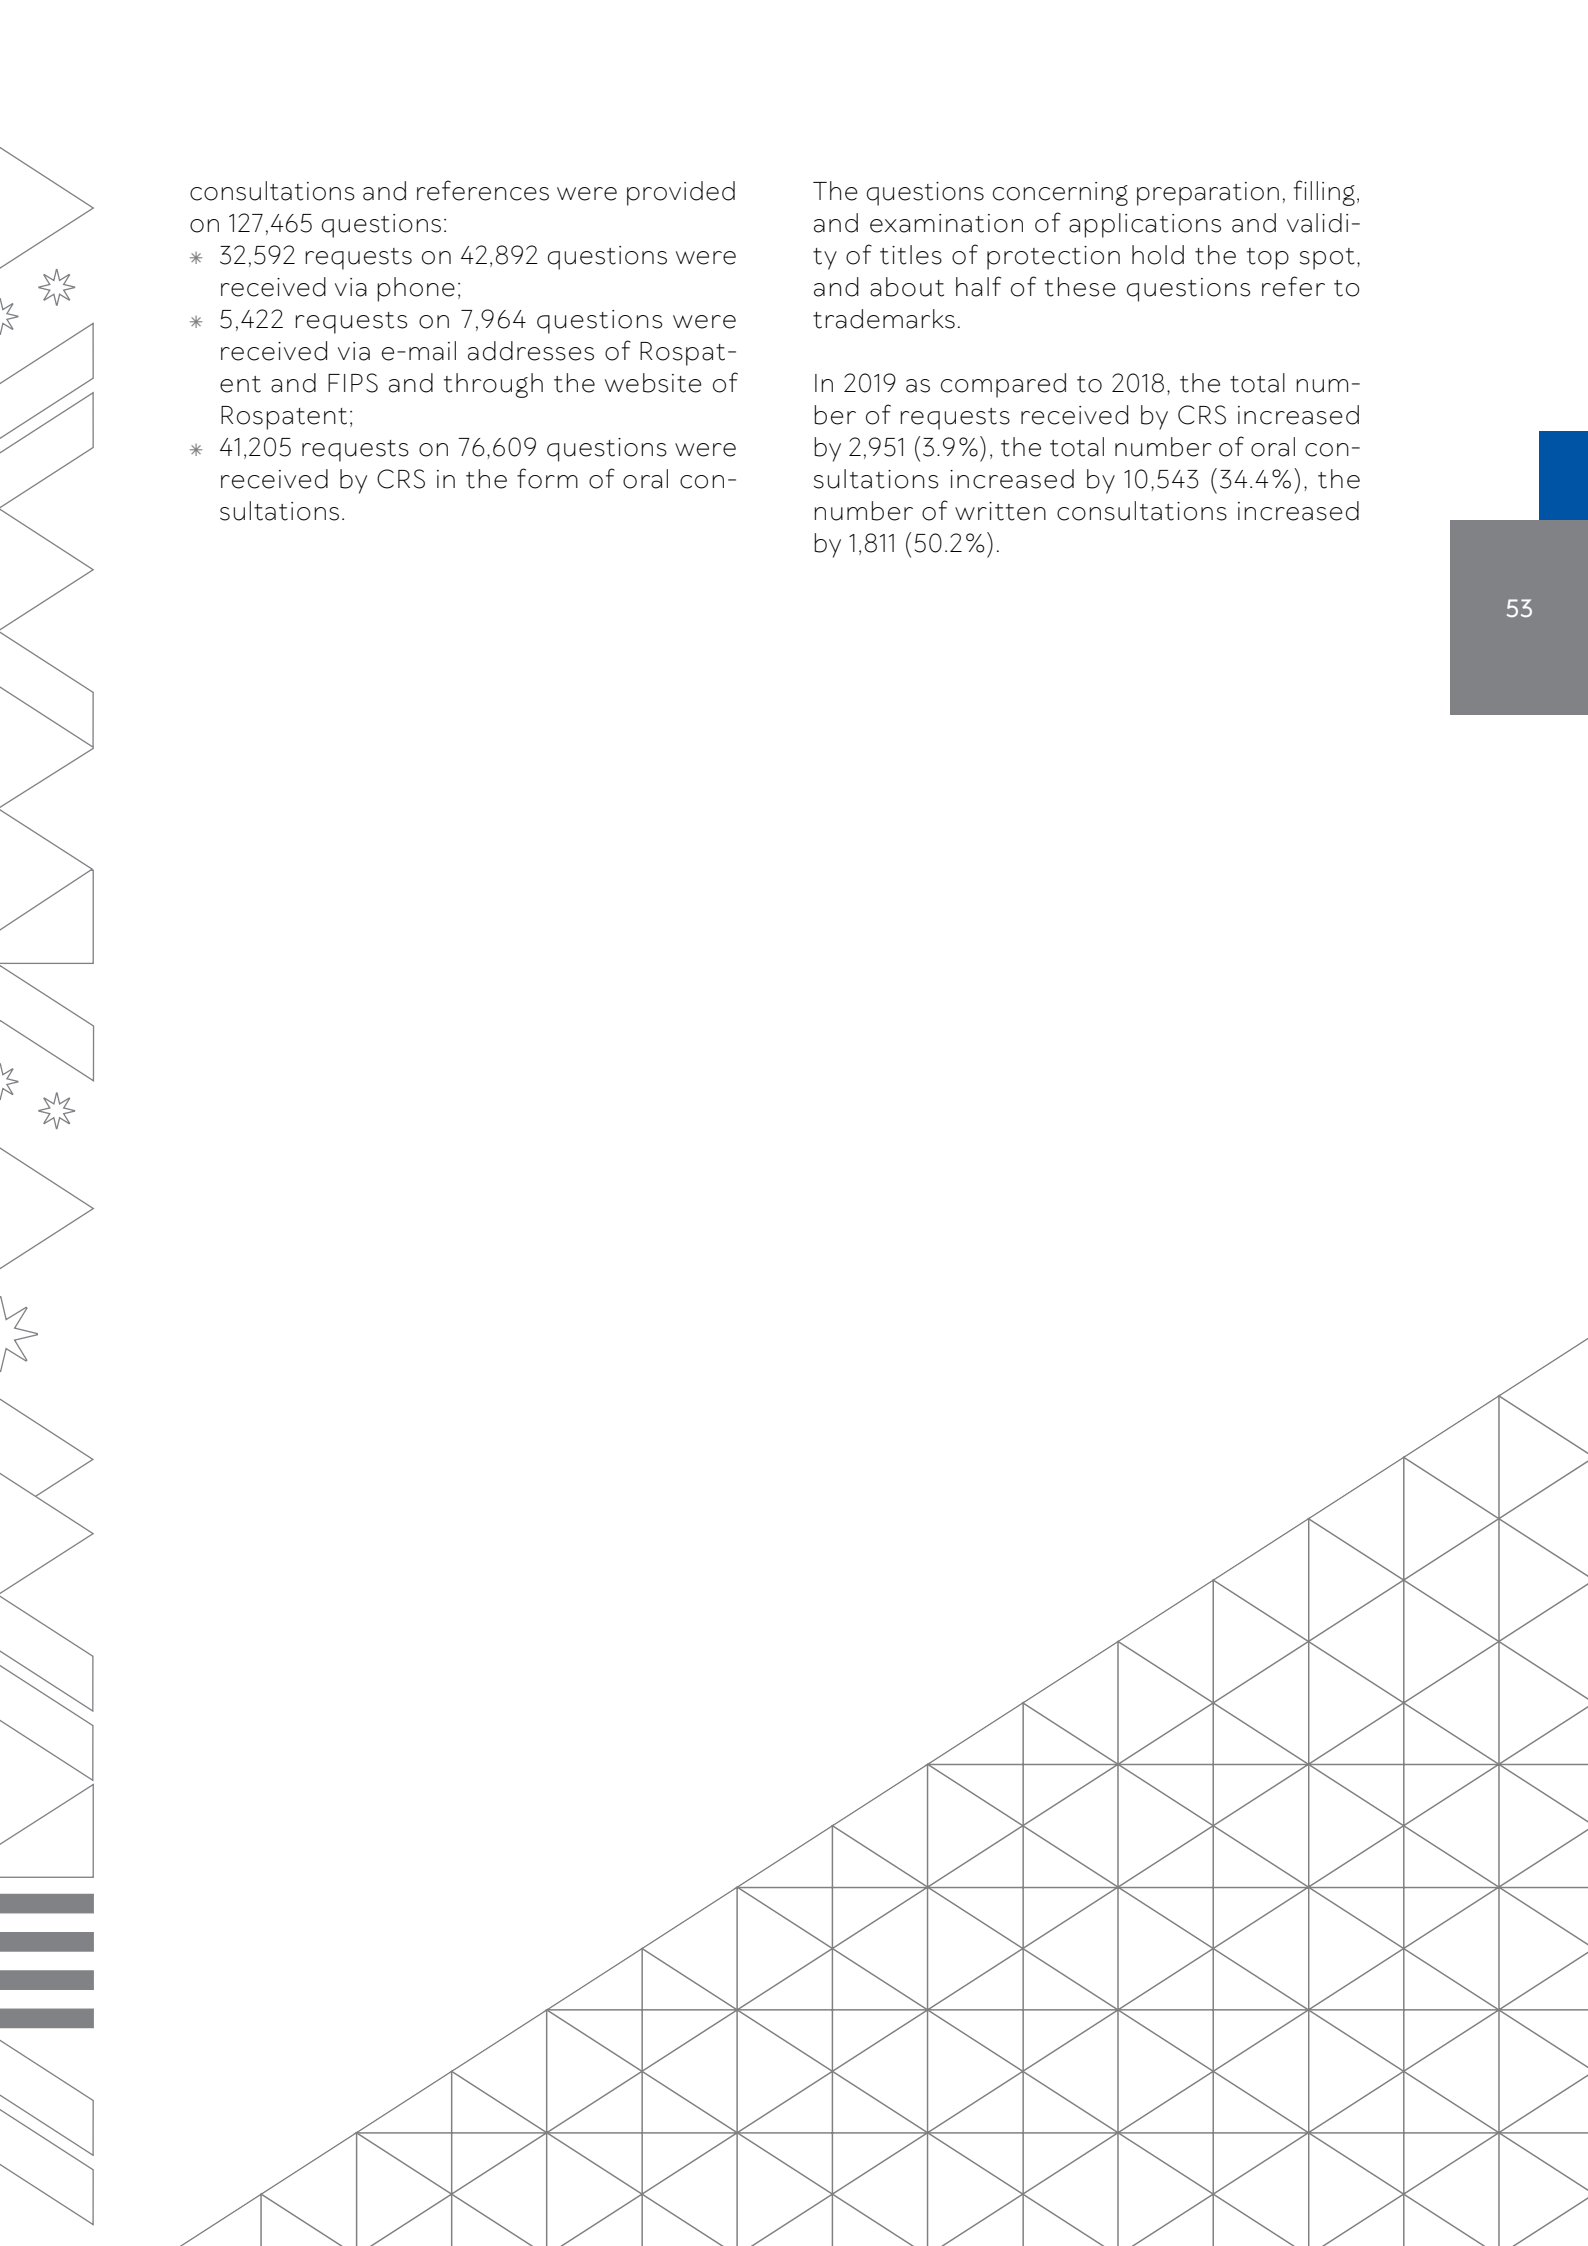

In regard to the receipt of justified complaints, measures to eliminate the identified violations and the reasons that led to the receipt of complaints were taken.

3.5.

STATISTICS OF REVIEWING CITIZENS' REQUESTS FOR CONSULTATIONS

Free of charge consultations on general issues that do not require conducting of a systematic analysis of legislative and by-law acts in the field of intellectual property protection, as well as on issues of reference origin, are provided by Rospatent and FIPS Consulting and Reference Service (hereinafter CRS).

In total, during the reported period, CRS received 79,219 requests, in connection to which

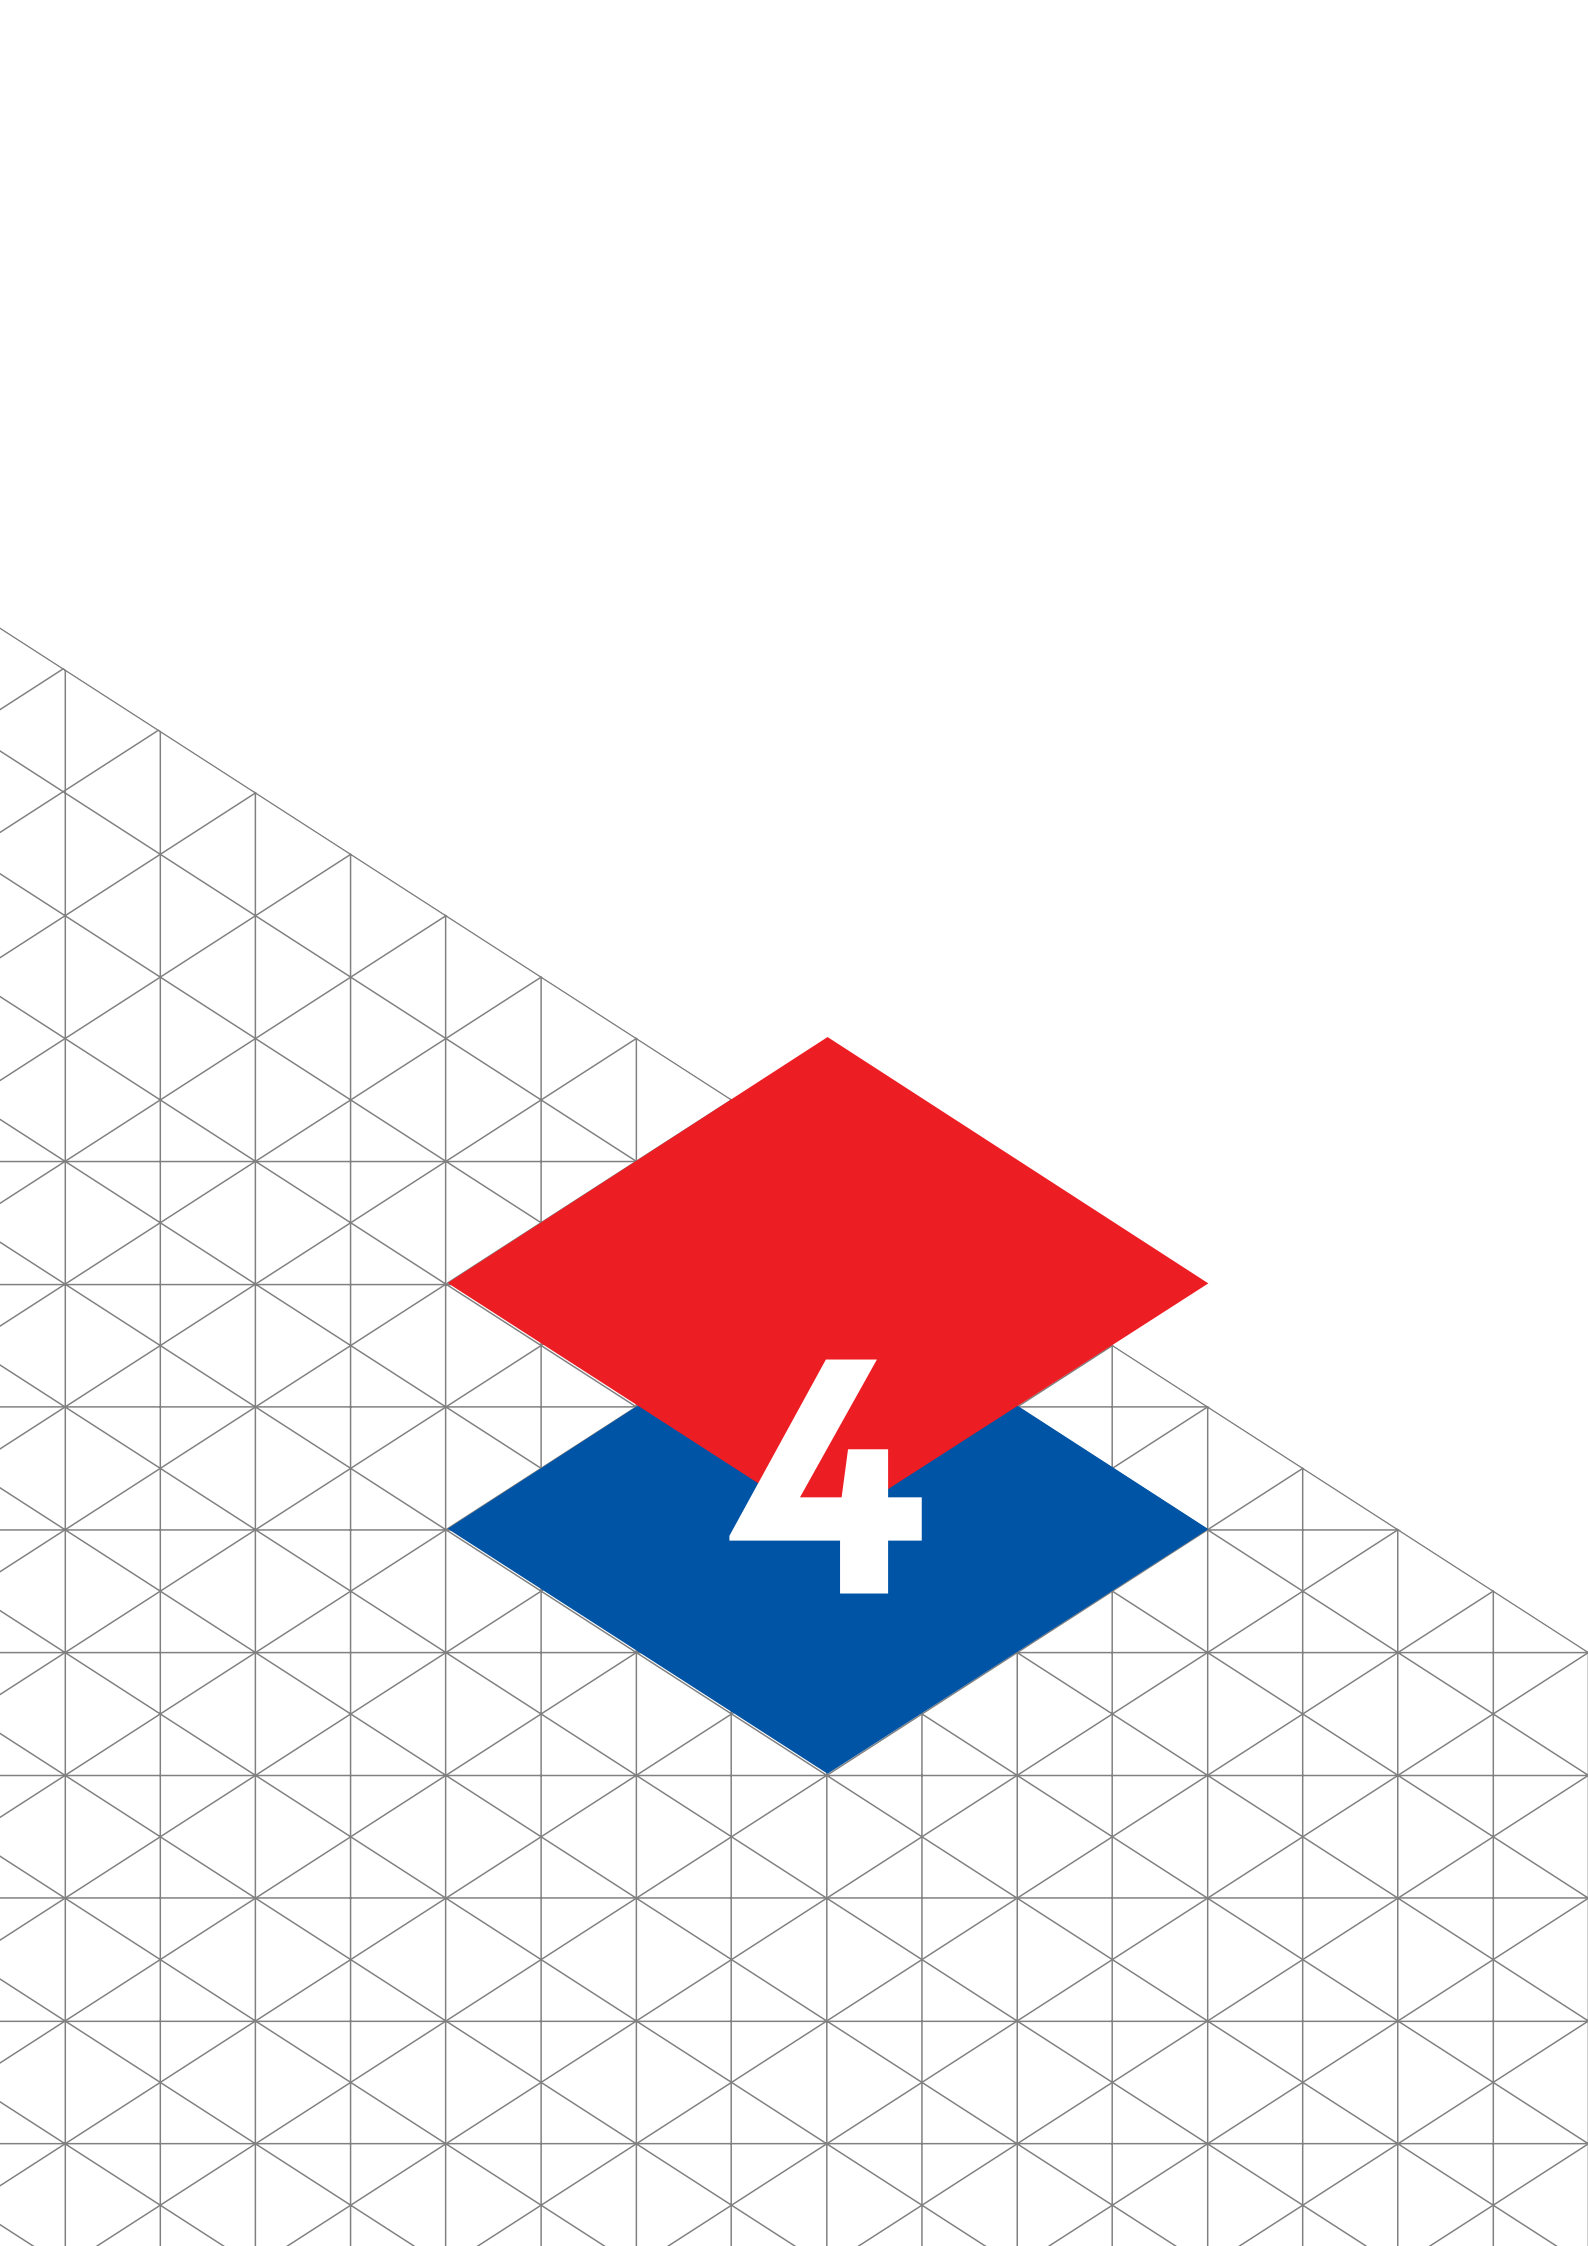

consultations and references were provided on 127,465 questions:

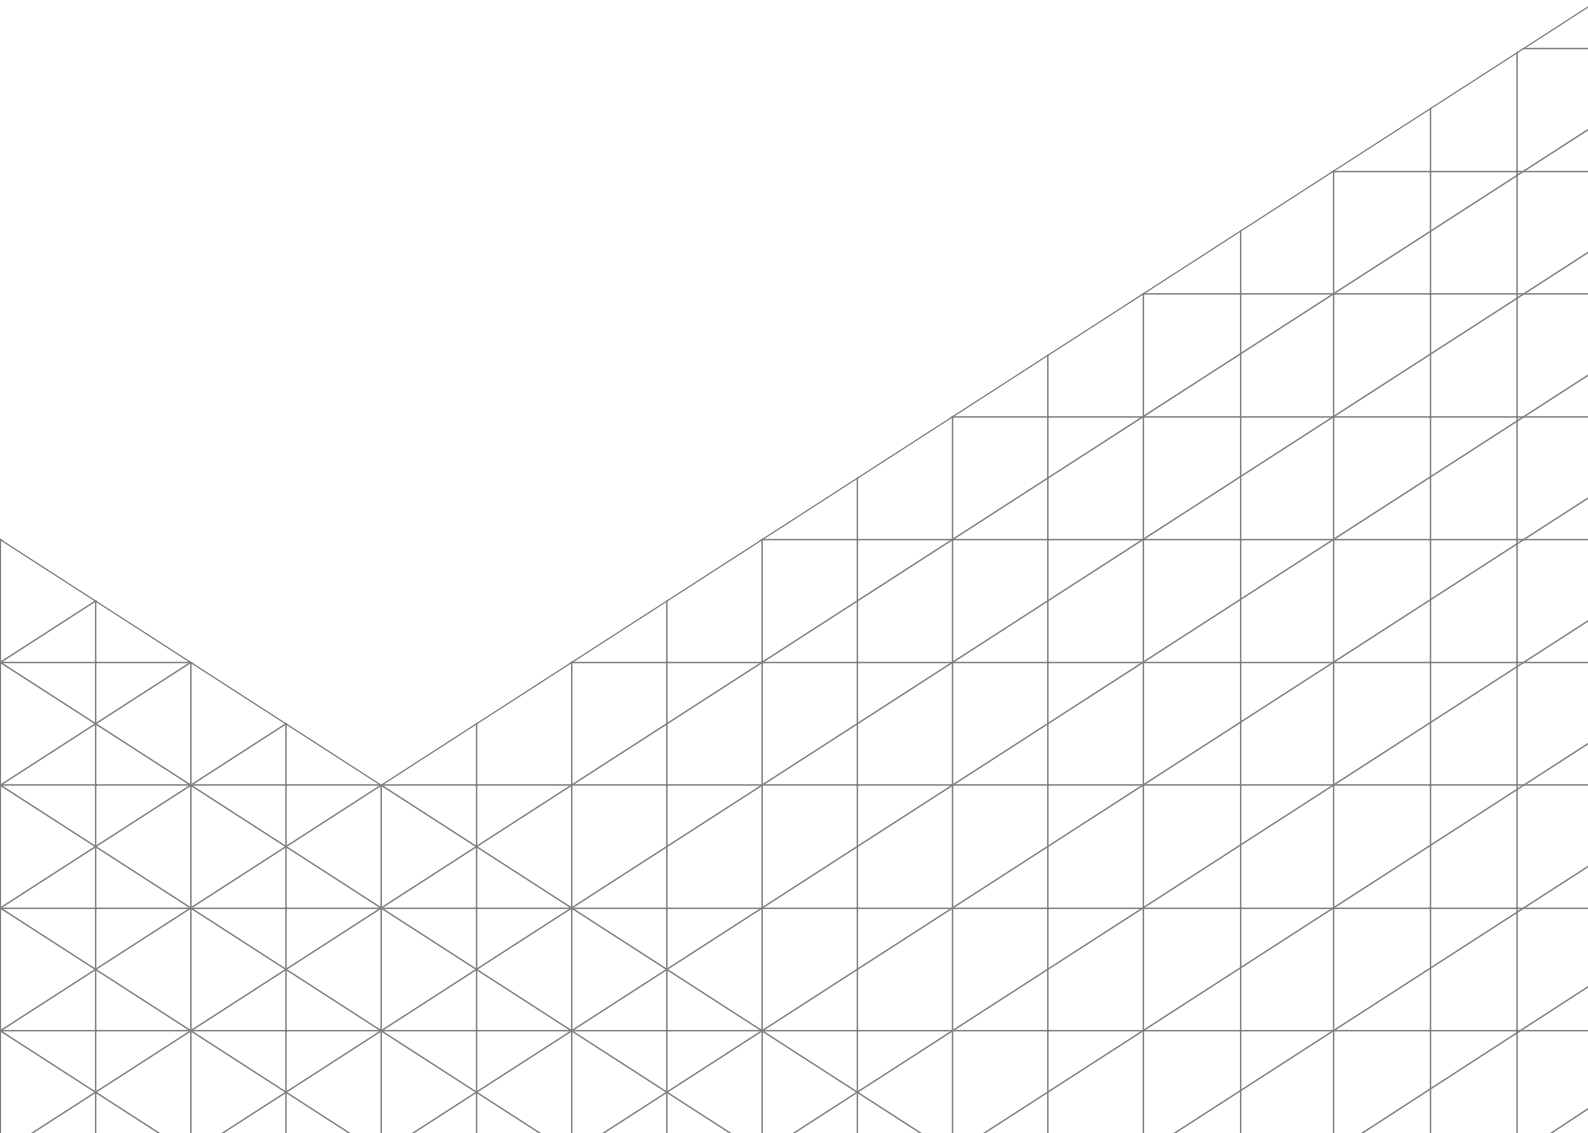

- * 32,592 requests on 42,892 questions were received via phone;
- * 5,422 requests on 7,964 questions were received via e-mail addresses of Rospatent and FIPS and through the website of Rospatent;
- * 41,205 requests on 76,609 questions were received by CRS in the form of oral consultations.

The questions concerning preparation, filling, and examination of applications and validity of titles of protection hold the top spot, and about half of these questions refer to trademarks.

In 2019 as compared to 2018, the total number of requests received by CRS increased by 2,951 (3.9%), the total number of oral consultations increased by 10,543 (34.4%), the number of written consultations increased by 1,811 (50.2%).

INTERNATIONAL COOPERATION

G. Mikheeva,

Head, International
Cooperation
Department

INTRODUCTION

In 2019, international cooperation remained an important aspect of the development of the intellectual property system. Rospatent carried out an active work to effectively represent interests of the Russian Federation in the area of cooperation with foreign states, international organizations, and associations, as well as to promote the development of the legal and regulatory frameworks.

International cooperation is built on three levels: multilateral, regional, and bilateral. Multilateral cooperation is implemented through global international organizations, such as the World Intellectual Property Organization (WIPO) and the World Trade Organization (WTO).

Representatives of Rospatent continued to be actively engaged in the work of WIPO, including promotion of the Russian initiatives related to the digitalization of intellectual property. In 2019, promotion of the Russian language was one of the central themes. On December 2–4, WIPO Director General Francis Gurry visited Moscow and had a meeting with the former Prime Minister of the Russian Federation Dmitry Medvedev.

Regional cooperation of Rospatent was conducted across a wide range of areas. The year 2019 was marked by a number of significant achievements in the development of regional IP protection systems in the Eurasian region. On September 9, 2019, in Nur-Sultan (Republic of Kazakhstan), following a diplomatic conference, the Protocol on the Protection of Industrial Designs to the Eurasian Patent Convention of September 9, 1994 (Industrial Design Protocol) was adopted. The Industrial

Design Protocol is aimed to create a regional system of the legal protection of industrial designs. With regard to the CIS and the EAEU framework, the work continued on improving the regulatory framework for cooperation in the field of intellectual property, as well as on developing the CISPATENT project.

Traditional and new joint projects were implemented with the European Patent Office and the European Union Intellectual Property Office. The regulatory framework for cooperation with European partners was updated: new areas of joint activities were introduced, including exchange of experience in the examination of inventions in the field of artificial intelligence (AI), as well as the use of new technologies in the activities of patent offices.

Within the framework of the Eastern Economic Forum under APEC, a joint initiative focused on small and medium-sized enterprises was carried out.

Enhanced collaboration between the BRICS countries continued, the scope of cooperation expanded to the fields of trademarks and industrial designs.

Rospatent continued improving bilateral cooperation with the intellectual property offices of almost all regions of the world. In 2019, Memorandums of Cooperation were signed with a number of offices, joint initiatives and internships were held. Rospatent exchanged experience with foreign intellectual property offices on current challenges of legal regulation and examination.

4.1.

WORLD INTELLECTUAL PROPERTY ORGANIZATION (WIPO)

In 2019, work continued to promote the initiatives of the Russian Federation at WIPO. As part of the promotion of the Russian language initiative, work continued in the Working Groups on the Legal Development of the Madrid System for the International Registration of Trademarks and the Hague System for the International Registration of Industrial Designs (see tables 4.1 and 4.2 of Annex 4). The proposals were supported by the regional group of countries of Central Asia, the Caucasus and Eastern Europe, as well as by Eurasian integration associations: the Eurasian Economic Commission and the Eurasian Patent Organization (EAPO).

On the proposal of the Russian party, additional financing was included in the WIPO Program and Budget for 2020–2021 to expand the number of WIPO official publications, analytical and reference materials on the substantive matters of intellectual property development, translated into Russian and other official languages of the Organization.

On June 6, 2019, to promote the Russian language, WIPO organized the Russian Language Day, dedicated to the 220th anniversary of the Russian poet Alexander Pushkin.

Rospatent actively uses the WIPO platform to promote the Russian initiatives related to the **digitalization of intellectual property** at the international level.

The work of the Task Forces continued within the framework of the **WIPO Standards Committee**. The Russian Federation led Task Forces in Creation of a new WIPO standard for using 3D models and images in application and publication documents, as well as on Blockchain technology (in cooperation with Australia).

3D Task Force on the use of 3D models and images defines the main tasks, goals, formats, technical means, best practices for working with three-dimensional images, as well as the legal framework in this area. Currently, research is being conducted on the use of 3D models and images in the work of offices, as well as on the examples of industrial use. Based on the results of consultations with the participation of a wide range of stakeholders, including service users, recommendations will be developed on the industrial standardiza-

tion of 3D models and images, and the corresponding WIPO Standard will be prepared.

Blockchain Task Force analyzes the data on the experience of offices and on the examples of industrial use of technology, as well as on the opportunities of using Blockchain technology for IP protection, information processing on objects for IP rights protection and their future use for the preparation of recommendations for the corresponding WIPO Standard.

Comprehensive dialogue is maintained within the framework of Task Force: communication is carried out through a thematic electronic forum and videoconferences.

Within the framework of the **Standing Committee on the Law of Patents** (SCP), the Russian delegation came up with the number initiatives related to the development of the patent system taking into account the digitalization of patent offices. The Russian party initiated research on time of consideration of patent applications in national offices. Following a proposal of Rospatent, a meeting aimed to exchange experience and knowledge on the use of AI for the examination of patent applications is organized alongside with an information session on patentability assessment of inventions in the fields of IT-technologies and AI.

In May 2019, following the initiative of the Russian party during a meeting of the Committee on Development and Intellectual Property (CDIP), thematic session “IP and Development in a Digital Environment” was organized, within which comprehensive vision of current challenges and opportunities that digital technologies open up for the IP sphere was presented. Following the session, the Russian proposal for draft decision embodying the digital agenda was adopted. WIPO will conduct analysis of existing gaps and opportunities for bridging the digital divide between the countries and expanding access to information and communication technologies. Based on this comprehensive analysis, WIPO's member states will be able to present their national or regional projects.

The Russian party supports comprehensive expert dialogue on digitalization. In 2019, with the support of WIPO, the second international conference “Digital Transformation: Focus on IP” was held in Moscow. More than 800 participants from 20 different countries took part in it. Russian and international experts presented their vision of the challenges and opportunities of digitalization, methods, and principles of introducing digital technologies into the work of IP offices. Pilot technical solu-

tions related to the optimization of the registration process and protection of objects for IP right protection were presented.

In the framework of the ***Standing Committee on Copyright and Related Rights*** (SCCR), work was continued to promote the initiative of Rospatent on strengthening the protection of theater stage directors' rights. The purpose of the proposal is to consolidate the legal status of stage directors by amending existing international agreements or by developing a new international agreement. Case study on the national legislation's practices and law enforcement on this subject is currently underway. The results of this research will be presented to the SCCR in 2020.

At the ***PCT Working Group*** meeting, the delegation of the Russian Federation together with the delegations of Brazil and other BRICS countries promoted the initiative of the reduction of PCT fees for universities from developing countries and countries with economies in transition. Rospatent, as the International Searching Authority and the International Preliminary Examining Authority, also took part in the work of the ***Meeting of International Authorities Under the PCT*** and its Subgroup on Quality. The focus of these bodies is on timely and high-quality preparation of reports on international search and international preliminary examination conclusions, the relationship between the international and national phases of the PCT application examination, PCT Minimum Documentation, development of online services, as well as optimization of PCT fee transfer processes.

The position of the Russian party was promoted both in the national capacity and as a part of a regional group of countries of Central Asia, the Caucasus and Eastern Europe. A number of initiatives were supported in the form of general statements from the BRICS countries.

On September 30, 2019, the ***Russian National Evening held as part of the 59th series of meetings of the Assemblies of the Member States of WIPO*** was a great success. At exhibition "Russia is a country of inventions and creativity", different inventions aimed at solving ambitious global challenges such as conquering space, developing atomic energy, creating unique materials and advanced technologies were demonstrated. Models of new generation reactors together with a virtual tour of the site of the Experimental demonstration energy complex were presented, vir-

tual reality zones with the possibility to take a walk along the International Space Station and to go into outer space, as well as virtual trips in 3D glasses to anywhere in the world thanks to satellite images were organized. In addition, a concert of the "Russia" State academic Russian folk ensemble named after Lyudmila Zykina and reception on behalf of the Russian Federation were held. The WIPO leadership together with the delegations of the participating countries of the Assemblies commended the events of the Russian National Evening.

Last year is marked by a series of visits by the WIPO leadership to the Russian Federation, including ***an official visit of WIPO Director General Francis Gurry to Moscow*** on December 2–4, 2019, during which he met with the former Prime Minister Dmitry Medvedev.

During 2019, active work to promote the global systems for registration of objects for IP right protection was carried out. Within the framework of the cooperation plan with WIPO, 18 seminars were organized on a wide range of topics, such as "Intellectual Property for Small and Medium-sized Enterprises", "The Madrid System for the International Registration of Trademarks", "The Hague System for the International Registration of Industrial Designs", "IP Policies for Universities and Research Institutions", and seminars on the International Patent System provided for by the Patent Cooperation Treaty (PCT).

In 2019, seminars were held in the following cities: Astrakhan, Belgorod, Veliky Novgorod, Yekaterinburg, Irkutsk, Naryan-Mar, Novosibirsk, Omsk, Kyzyl, Saint Petersburg, Tomsk, Tyumen, Ufa, Yaroslavl.

4.2.

ROSPATENT ACTIVITIES TO FULFILL INTERNATIONAL OBLIGATIONS OF THE RUSSIAN FEDERATION ARISING FROM ITS PARTICIPATION IN THE PATENT COOPERATION TREATY (PCT)

Rospatent activities as the International Searching Authority and International Preliminary Examining Authority

In 2019, Rospatent continued its work as an International Searching Authority and International Preliminary Examining Authority under the Patent Cooperation Treaty (PCT).

This work was carried out in accordance with the Agreement between Rospatent and International Bureau of the World Intellectual Property Organization (IB WIPO), which was concluded for the period of 01.01.2018–31.12.2027. According to this Agreement, Rospatent conducted an international search and international preliminary examination of international applications in the Russian and English languages for Russian and foreign applicants, since it was chosen as the competent International Authority by 29 receiving offices of the Contracting States and regional organizations. In addition, Rospatent continued to conduct work in accordance with bilateral agreements concluded by FIPS with the Eurasian Patent Organization (EAPO), the Turkish Patent and Trademark Office (Turkpatent) and the Patent Offices of the CIS countries.

In 2019, a request for the international search was received in respect of 3939 international applications. Table 4.3 of Annex 4 of the Report shows the statistics on the Receiving offices of different states and organizations, which in 2019 received most of the international applications, and the data for comparison with 2018 are shown in the parentheses.

Rospatent for several consecutive years has been ranked 6th in the world in terms of work carried out as the International Searching Authority (following the EPO, China, Japan, South Korea, and the United States).

Requests for international preliminary examination were received on 47 international applications, most of which (32) on applications filed to Rospatent as the Receiving Office.

In 2019, in accordance with the bilateral agreements, the reports were prepared on an international-type search for 583 Eurasian applications, 2 Turkish applications and 9 applications received from CIS countries.

The main indicators over the past 5 years, characterizing Rospatent as the International Searching Authority and International Preliminary Examining Authority, in accordance with bilateral agreements on different types of searches and examinations, are given in Table 4.4 of Annex 4 to the Report.

Activities of Rospatent as the Receiving Office

In accordance with Article 10 of the Patent Cooperation Treaty (PCT), as well as Rule 19 of the Regulations under the PCT, Rospatent as the Receiving Office accepts international applications from the individuals who are na-

tionals or residents of the Russian Federation. Applications are accepted in the Russian and in English languages.

In 2019, Rospatent as the Receiving Office collected 1,310 international applications, which is 24.6% more than in 2018 (1,077). Furthermore, for the first time in recent years, the number of international applications filed by legal entities (53,4% of the total number of applications) has exceeded the number of applications filed by individuals (46.6%).

Rospatent and the European Patent Office (EPO) are the competent International Searching Authorities for applications filed to Rospatent as the Receiving Office. Notably, the vast majority of applicants chose Rospatent as the International Searching Authority (1,233 applications).

Since January 1, 2016, Rospatent, as the Receiving Office, has been accepting international applications filed by the Russian applicants electronically through WIPO ePCT system. In 2019, 264 applications were filed online (20.15% of the total number of applications), while in 2018 a total number of 171 applications were submitted (15.9% from the total number of applications).

In addition, under the Eurasian Patent Convention (Article 15 (1) (ii)), Rospatent is the Receiving Office for Russian applicants filing Eurasian applications. In 2019, 152 Eurasian applications were submitted to Rospatent (in 2018–174 applications).

Table 4.5 of Annex 4 to the Report demonstrates the key performance indicators of Rospatent as the Receiving Office.

4.3.

ROSPATENT ACTIVITIES TO FULFILL INTERNATIONAL OBLIGATIONS OF THE RUSSIAN FEDERATION ARISING FROM ITS PARTICIPATION IN THE MADRID AGREEMENT CONCERNING THE INTERNATIONAL REGISTRATION OF TRADEMARKS AND THE PROTOCOL RELATING TO THE MADRID AGREEMENT

In 2019, the number of applications for the international registration of trademarks under the Madrid Protocol filed by the Russian applicants to Rospatent increased by 14.1% (in 2019, 1,940 applications were filed,

in 2018–1,700). The increase in the number of submitted applications indicates an increase in the interest of the Russian producers in the introduction of their products and services in foreign markets. Among the most active applicants are Russian companies such as Detsky Mir PJSC, Gazprom Neft PJSC, Mistral Alco LLC, Biotechnos LLC, Krasny Oktyabr PJSC, Rot Front OJSC.

Increase in the number of filled applications for the international registration of trademarks was facilitated by a state business assistance program providing state subsidies to offset costs of the registration procedures, as well as educational work carried out by Rospatent in cooperation with WIPO, and with the participation of representatives of technology parks, chambers of commerce, science educational organizations.

For several years, the Russian Federation has maintained its place in the top five leading countries most often indicated in international registrations. In 2019, 18,804 international registrations indicating the Russian Federation were submitted at WIPO, which is 8.0% higher than in 2018 (17,404 international registrations).

In July 2019, the delegation of Rospatent took part in the 17th session of the Working Group on the Legal Development of the Madrid System for the International Registration of Trademarks, which addressed challenges of replacing national or regional registration with international registration; the deadline for the response period to a notice of provisional refusal of protection; reduction of the dependency period of an international registration on the basic mark.

4.4.

ROSPATENT ACTIVITIES TO FULFILL INTERNATIONAL OBLIGATIONS OF THE RUSSIAN FEDERATION ARISING FROM ITS PARTICIPATION IN THE HAGUE SYSTEM FOR THE INTERNATIONAL REGISTRATION OF INDUSTRIAL DESIGNS

In 2019, there was a significant increase in the number of applications filed with Rospatent for the international registration of industrial designs (by 275%) for submitting them to the International Bureau. In January 2019, a new online service of electronic filing (e-filing) of applications for the international registration

of industrial designs became available on the FIPS website via the “My Account” section. This service that has a Russian-language interface, facilitates the process of filing applications and reduces the time of their consideration and forwarding, as well as reduces the costs of the payment of international fees, compared to filing applications on paper.

It is also worth mentioning that the number of filled international applications for industrial designs indicating Russia received from WIPO for consideration increased by 165%, which demonstrates the interest of foreign applicants in obtaining legal protection in the Russian Federation (in 2019, 872 international registrations with the indication of the Russian Federation were received, in 2018–329).

4.5.

PARTICIPATION IN WIPO PATENT INFORMATION CLASSIFICATIONS (IPC) BODIES

Rospatent continues to actively participate in the work of WIPO bodies on the revision and improvement of the International Patent Classification (IPC), the International Classification for Industrial Designs (Locarno Classification) and the International Classification of Goods and Services (NCL or NICE Classification).

Within the framework of the 51st Session of the Committee of Experts of the IPC Union, the Russian specialists presented the results of their work on the Russian-language version of IPC. In 2019, following work on improving the IPC, 1781 corrections were made. All corrections are translated into Russian and included in the Russian-language machine-readable version of IPC-2020.01, published on the FIPS website and posted on the Rospatent internal search system PatSearch.

Similar work was conducted as part of the revision of the Locarno Classification. 6 proposals were submitted for inclusion in the next version of the Classification. All proposals made by the delegation of Rospatent were considered at the Session of the Committee of Experts and accepted.

As part of the work to improve the International Classification of Goods and Services (NCL or NICE Classification), Rospatent prepared a number of comments and recom-

mendations to add new goods and services to the NCL alphabetical list for discussion at the next 29th Session of the Nice Union Committee of Experts, which took place in April-May 2019. Based on the work of the Committee of Experts, a new edition of the NCL Excel list of goods and services (NCL 11-2020) entered into force on January 1, 2020. An official Russian version of the list was published on the FIPS website.

FIPS experts continued to actively participate in the work of the Task Forces in order to develop new and improve the adopted WIPO Standards.

Rospatent as the leader of the 3D Task Force drafted a questionnaire on the use of 3D among industrial property offices. Rospatent plans to analyze the received results, and as a result to present at the next session of the Committee on WIPO Standards draft recommendations on 3D models and images when working with objects for IPR protection.

As the co-leader of the Blockchain Task Force Rospatent in cooperation with IP Australia continued to work out draft recommendations and a guideline on the implementation of this technology when working with objects for IPR protection and present it at the next session of the Committee on WIPO Standards.

At the 7th session of the Committee on WIPO Standards Rospatent experts proposed to amend the WIPO Standard ST.3 "Two-letter codes for the representation of states, other entities and organizations" and ST. 60 "Bibliographic data relating to marks" that were adopted by the Committee.

Within the framework of the revision of WIPO Standard ST.96 "Processing of Industrial Property information using XML" the development of new XML-schema components for GI and AoO was continued. The work on inclusion of proposed changes into the XML components of the Hague system was continued as well. Within the frameworks of transition from WIPO ST. 26 to WIPO ST.26 "Presentation of nucleotide and amino acid sequence listings using XML", FIPS experts tested the WIPO Software "WIPO Sequence" and submitted their proposals on modification of interface and functions of this tool. In order to raise awareness among stakeholders that the Office will transit from ST. 25 to ST.26 a special meeting dedicated to issues of presentation of nucleotide and amino acid sequence listings in accordance with this Standard were conducted.

4.6

THE WORLD TRADE ORGANIZATION (WTO)

Rospatent jointly with the Ministry of Economic Development of the Russian Federation prepared the positions of the Russian party to the meeting of the TRIPS Council held on February 13, 2019 in Geneva. In particular, the positions were related to relationship between the TRIPS Agreement and the Convention on Biological Diversity and the status of the moratorium on disputes which are not related to the direct violation of the TRIPS Agreement.

During the meeting of the TRIPS Council held on June 6-7, 2019, the Rospatent representative made a report about the development of regional brands in Russia.

Upon requests of the Ministry of Economic Development of the Russian Federation, Rospatent prepared written comments to the Trade policy Reviews of Canada, Uzbekistan, Peru, the European Union. The Russian law on geographical indications was notified in WTO.

Also the positions on e-commerce were coordinated throughout the year.

4.7

BRICS

On February 25 - March 1, 2019 in South Africa the annual training of patent examiners from the BRICS countries was held with active support of Rospatent. The experts of Rospatent supervised the training and made presentations together with the representative of the Eurasian Patent Office about examination quality management, patent classification, patent search strategies, novelty and inventive step analysis.

On April 15-16, in South Africa the 11th meeting of the Heads of Intellectual Property Offices took place. The Eurasian Patent Office also took part in the meeting. The participants agreed to extend cooperation on the areas of industrial designs and trademarks.

The seminar on the exchange of experience and best practices in the field of national strategies and policies in intellectual property was held on August 27-28 in Brasilia (Brazil) on the sidelines of the 21st meeting of the BRICS

Contact Group on Economic and Trade Issues. The Russian party presented the experience in intellectual property development using digital technologies.

On October 1, 2019, in Geneva (Switzerland) the Heads of BRICS IP Offices held an informal meeting. The parties discussed common positions on the agenda of the meetings of WIPO Assemblies and reached the agreement to bring the joint calendar into line with common calendar of BRICS cooperation.

Great attention was paid to the preparation for the chairmanship of Russia in BRICS in 2020.

4.8

ASIA-PACIFIC ECONOMIC COOPERATION FORUM (APEC)

The implementation of project "IP Commercialization for SMEs" became the key achievement within the APEC forum. Under the project, the seminar was held on September 10–12, 2019 in Vladivostok (Russia) with participation of representatives from 10 APEC economies and WIPO. The event was organized on the sidelines of the Eastern Economic Forum.

4.9.

EUROPEAN PATENT OFFICE (EPO)

During the year, there was an exchange of experience in the field of examination of patent applications: Rospatent experts took an active part in training seminars and conferences organized by EPO. In turn, EPO experts attended all key international events of Rospatent.

An important result of the joint work was the approval of the Two-Year Cooperation Program for 2020–2021. The signing of the document with EPO President Antonio Campinos took place on the sidelines of the 59th series of meetings of the Assemblies of the Member States of WIPO in Geneva. The document included new areas of joint activities, including the exchange of experience in the examination of inventions in the field of AI, the use of new technologies in the activities of Patent offices. In addition, the existing documents on inter-agency cooperation were extended,

including the Agreement on the Cooperative Patent Classification (CPC)

In 2019, Rospatent continued sending data about Russian patent documents classified by CPC to EPO. New versions of CPC (four versions per year) were installed into the internal information systems of Rospatent with the possibility of their automated translation into Russian.

The SEC classification of applications of the Eurasian Patent Office (EAPO) for international search also continued.

4.10.

EUROPEAN UNION INTELLECTUAL PROPERTY OFFICE (EUIPO)

In 2019, active cooperation with the European Union Intellectual Property Office (EUIPO) continued. During the year, communication was realized at the expert level, the Russian experts took part in educational events organized by EUIPO. EUIPO representative took part in the XXIII International Scientific and Practical Conference of Rospatent.

Cooperation with EUIPO was practical and informative. During the year, a series of seminars and video conferences took place on various practical aspects of the operation of intellectual property systems. The major emphasis was placed on the issues of digitalization and the introduction of modern ICT technologies into the activities of the Patent offices.

4.11

COMMONWEALTH OF INDEPENDENT STATES (CIS)

Rospatent within the scope of its competence participated in the work on such documents as the Agreement on cooperation of customs authorities of CIS member states in the field of IPR enforcement (signed in Ashkhabad on May 31, 2019), the Strategy of economic development of CIS for the period up to 2030 and the Action Plan on its implementation. The section on intellectual property was agreed as part of the Strategy.

On May 30–31 in Rospatent the ordinary session of the Coordination Council for the

CISPATENT project was held. The parties summarized the year work and discussed the plans for the next year. The work on the development of CISPATENT project was initiated.

The 9th session of the Interstate Council for Legal Protection and Enforcement of Intellectual Property (MGSIS) took place on September 5–6 in the Republic of Kirgizia. The agenda included the discussion of the work on new edition of the Agreement on measures to prevent and combat the use of false trademarks and geographical indications.

4.12

EURASIAN PATENT ORGANIZATION (EAPO)

The main event of the year was the Diplomatic Conference on Adoption of the Protocol on the Protection of Industrial Designs to the Eurasian Patent Convention of September 9, 1994 (EUPC), which was held on September 9, 2019 in Nur-Sultan (the Republic of Kazakhstan). The Russian Federation was among five contracting states of the EUPC who signed the document during the Conference.

The Protocol creates the Eurasian system of legal protection of industrial designs, which will take effect on the Region of all contracting states and will allow to give weight to the institution of industrial designs in the region and increase attractiveness for applicants. The text of the Protocol was prepared taking into account the possibility of the EAPO accession to the Hague System of International Registration of Industrial Designs. It is of a great importance for the Russian Federation in light of the recent accession of the Geneva Act of the Hague Agreement Concerning the International Registration of Industrial Designs of July 2, 1999.

The results of the Diplomatic Conference were discussed during the 35th session of the Administrative Council of the EAPO (September 10–11, 2019, Nur-Sultan). The decisions were made on development of normative acts required for the implementation of the Protocol. Also during the session, the proposal of the Russian party was supported about expanding the number of participants of the educational programs, organized by the EUIPO on the base of RSAIP; the Provision on long-term internships at the EAPO was adopted; the proposal on requesting by the EAPO of the status of the International Searching Au-

thority and International Preliminary Examining Authority under the Patent Cooperation Treaty.

Also the cooperation between Rospatent, the EAPO and FIPS on electronic interaction continued throughout the year in the format of working meetings.

4.13

EURASIAN ECONOMIC UNION (EAEU)

In the EAEU in 2019 the main focus was on preparation of a strategic document, which determined the main directions of Eurasian integration development up to 2025.

On March 6, 2019, in the Eurasian Economic Commission (EEC) the 9th session of the Advisory Committee on Intellectual Property was held. The main issues of the Eurasian agenda were discussed, including preparation of draft international acts, exhaustion of exclusive rights to a trademark, interaction between customs authorities and patent offices of the EAEU member states and the EEC.

The Rospatent's representatives actively participated in trade negotiations with Egypt and in work on other trade agreements, particularly with Singapore and Israel.

4.14

BILATERAL COOPERATION

In 2019, Rospatent continued the development of mutually beneficial cooperation and exchange of experience with foreign intellectual property offices in line with current trends and applicants' needs.

The text of bilateral Memorandum of Cooperation was agreed with the IP offices of India. Signing of the document is planned on the sidelines of the 13th meeting of the Heads of BRICS IP Offices.

2019 was marked by the fruitful cooperation with China. Rospatent reached an agreement with the China National Intellectual Property Administration about the signing of new Memorandum of Understanding, which will regulate general issues of interaction between

the offices. The delegations of Rospatent and FIPS took part in 6 international events organized by the Chinese party. In particular, the delegation of Rospatent headed by the Head of Rospatent Mr Grigory Ivliev participated in the 6th Russian-Chinese EXPO held on June 15–19 in Harbin. The Head of Rospatent took part in the 2nd Russian-Chinese Interregional Cooperation Forum and made a presentation “Regional brands of Russia”. Rospatent also participated in the 5th Russian-Chinese Forum of Small and Medium-sized Businesses and presented a stand “Traditional handicrafts of Russia”. In November, the delegation of CNIPA experts visited Rospatent to discuss the activity of the Chamber for Patent Disputes. The parties reached an agreement to pay a return visit of the experts of the Chamber for Patent Disputes to Beijing.

During the 11th HIPO meeting an official acquaintance with a new president of the National Institute of Industrial Property of Brazil Mr Claudio Vilar Furtado took place. An agreement was reached on preparation and signing of the Memorandum of Understanding on the Patent Prosecution Highway program (PPH).

Rospatent reached an agreement with the Companies and Intellectual Property Commission of South Africa (CIPC) on organization of the visit of CIPC specialists to Rospatent to discuss digitalization issues.

Activization of cooperation with the IP offices of Austria and Germany was of great importance in 2019. The visits of the Rospatent's delegation to the offices took place in February and October respectively. The main result of the negotiation with the president of the Austrian Patent Office Ms Karepova held on February 22 was signing of the interdepartmental Memorandum of Understanding. On November 27–28, the Rospatent's representatives participated in the Russian-Austrian seminar on intellectual property and technology transfer.

During the meeting with the Vice-President of the German Patent and Trademark Office Ms. Moosbauer, the main areas of cooperation were discussed, an agreement was reached to update Memoranda on general issues and data exchange.

Upon the results of the 13th meeting of the Russian-French Working Group on the Protection of Intellectual Property and Combating Counterfeit Goods (Moscow, July 10–11, 2019), the decision was made to continue the work during the intersessional period in such areas

as protection of geographical indications, control over the circulation of medicines, transfer of technology and preparation of a number of bilateral documents.

In accordance to the previously made agreements, the Russian-French seminar “Protection and importance of geographical indications and appellations of origin for the products of agro-industry” was held on October 9–12, 2019 in the framework of the business program of the 21st Russian Agricultural Exhibition “Golden Autumn-2019”.

In September 2019, at the invitation of the Czech party, the Head of Rospatent Mr. Grigory Ivliev took part in the conference and celebrations on the occasion of the 100th anniversary of the Czech IP Office.

In the framework of cooperation with the Japan Patent Office, the regular examiner exchange was held on March 11–15 in Tokyo within the respective program. On September 30, in Geneva the meeting with the management of the JPO took place, during which the participants reached an agreement to organize mutual visits of experts in 2020.

Upon the results of the visit of the Rospatent's delegation headed by the Head of Rospatent Mr Grigory Ivliev to Hanoi held on June 18–19, the agreement was reached with the Director General of the IP Office of Viet Nam Mr Dinh Huu Phi on preparation of two Memoranda – on Patent Prosecution Highway program (PPH) and data exchange. The Vietnamese side commended the Rospatent's initiative on promotion of the Russian language within WIPO.

On June 22–27, in the framework of the official visit of the Association of Lawyers of Russia to Mongolia, the meeting with the Head of the IP Office of Mongolia Mr. Erdenebat Erdenesuren was held. During the meeting, the participants reached an agreement to prepare new interdepartmental Memorandum and to organize training for Mongolian specialists on the base of RSAIP.

In January 2019, with the support of WIPO, the working visit of delegation of the Syrian Arab Republic was held. On November 13–17, the return visit of the Rospatent's delegation took place aimed at development of the Syrian IP system. Following the results of the meeting with the Minister of Internal Trade and Consumer Protection of Syria, the interdepartmental Memorandum of Understanding was signed. The Syrian party noted that the

Russian experience is useful for the development of the Syrian IP system. An agreement was reached to continue the dialogue between the Offices and to organize the visit of Rospatent's experts to Syria in 2020 in order to share the experience in the field of IP and promotion of innovations.

On April 22–23 the visit of the Head of the IP Office of Azerbaijan Mr Imanov was held aimed at the participation in the Conference “Digital Transformation”. The agreement was reached to sign the interdepartmental Memorandum. It was subsequently indicated in the Protocol of the 18th meeting of the Intergovernmental Commission (Baku, December 9, 2019).

The work of the Sub-Commission on Intellectual Property of the Commission on the Formation of the Unified Scientific and Technological Space of the Union State was launched with the Belorussian party. On February 25 and May 27, the meetings of the Sub-Commission took place by videoconference. Following the results, the draft Recommendations on the allocation of rights to the IP objects created in the framework of implementation of the Union State programs and inventory of such objects was developed. The Recommendations were adopted on June 13 during the 4th meeting of the Commission. The results of the work of Sub-Commission were summed up during the 5th meeting of the Commission held on December 19 in Minsk. Besides, on August 1–2, 2019 the delegation of the National Center of Intellectual Property of the Republic of Belarus headed by the Director General Mr Rabavolau visited Rospatent.

In the framework of cooperation with Kazakhstan, the visit to Nur-Sultan was held on March 29 to participate in the meeting with the management of the Ministry of Justice of the Republic of Kazakhstan, the National Institute of Intellectual Property and the EAPO on bilateral and regional cooperation issues. The interaction with the Kazakhstan party continued during the events, dedicated to the Diplomatic Conference held in Nur-Sultan on September 9, 2019.

On January 21, the Kyrgyz delegation headed by the Chairperson Ms Moldosheva visited Rospatent. On March 28, in Bishkek the Agreement on providing access to the PatSearch system was signed during the highest level visit. In the framework of implementation of the Agreement, the training on the work in the PatSearch system was organized for the Kyrgyzpatent examiners by the videoconference.

The agreement to provide the access to PatSearch was also reached with the Tajikistan party. The respective document was prepared for signing during one of the upcoming events of the high level.

The work with the IP Office of Uzbekistan was significantly intensified. In particular, the meeting of the Head of Rospatent and deputy Head of the IP Office of Uzbekistan Mr. Bakhtor Sagdullaev was held on the sidelines of the XXIII International Conference of Rospatent.

4.15

PARTICIPATION OF ROSPATENT IN PATENT PROSECUTION HIGHWAY PROGRAM (PPH)

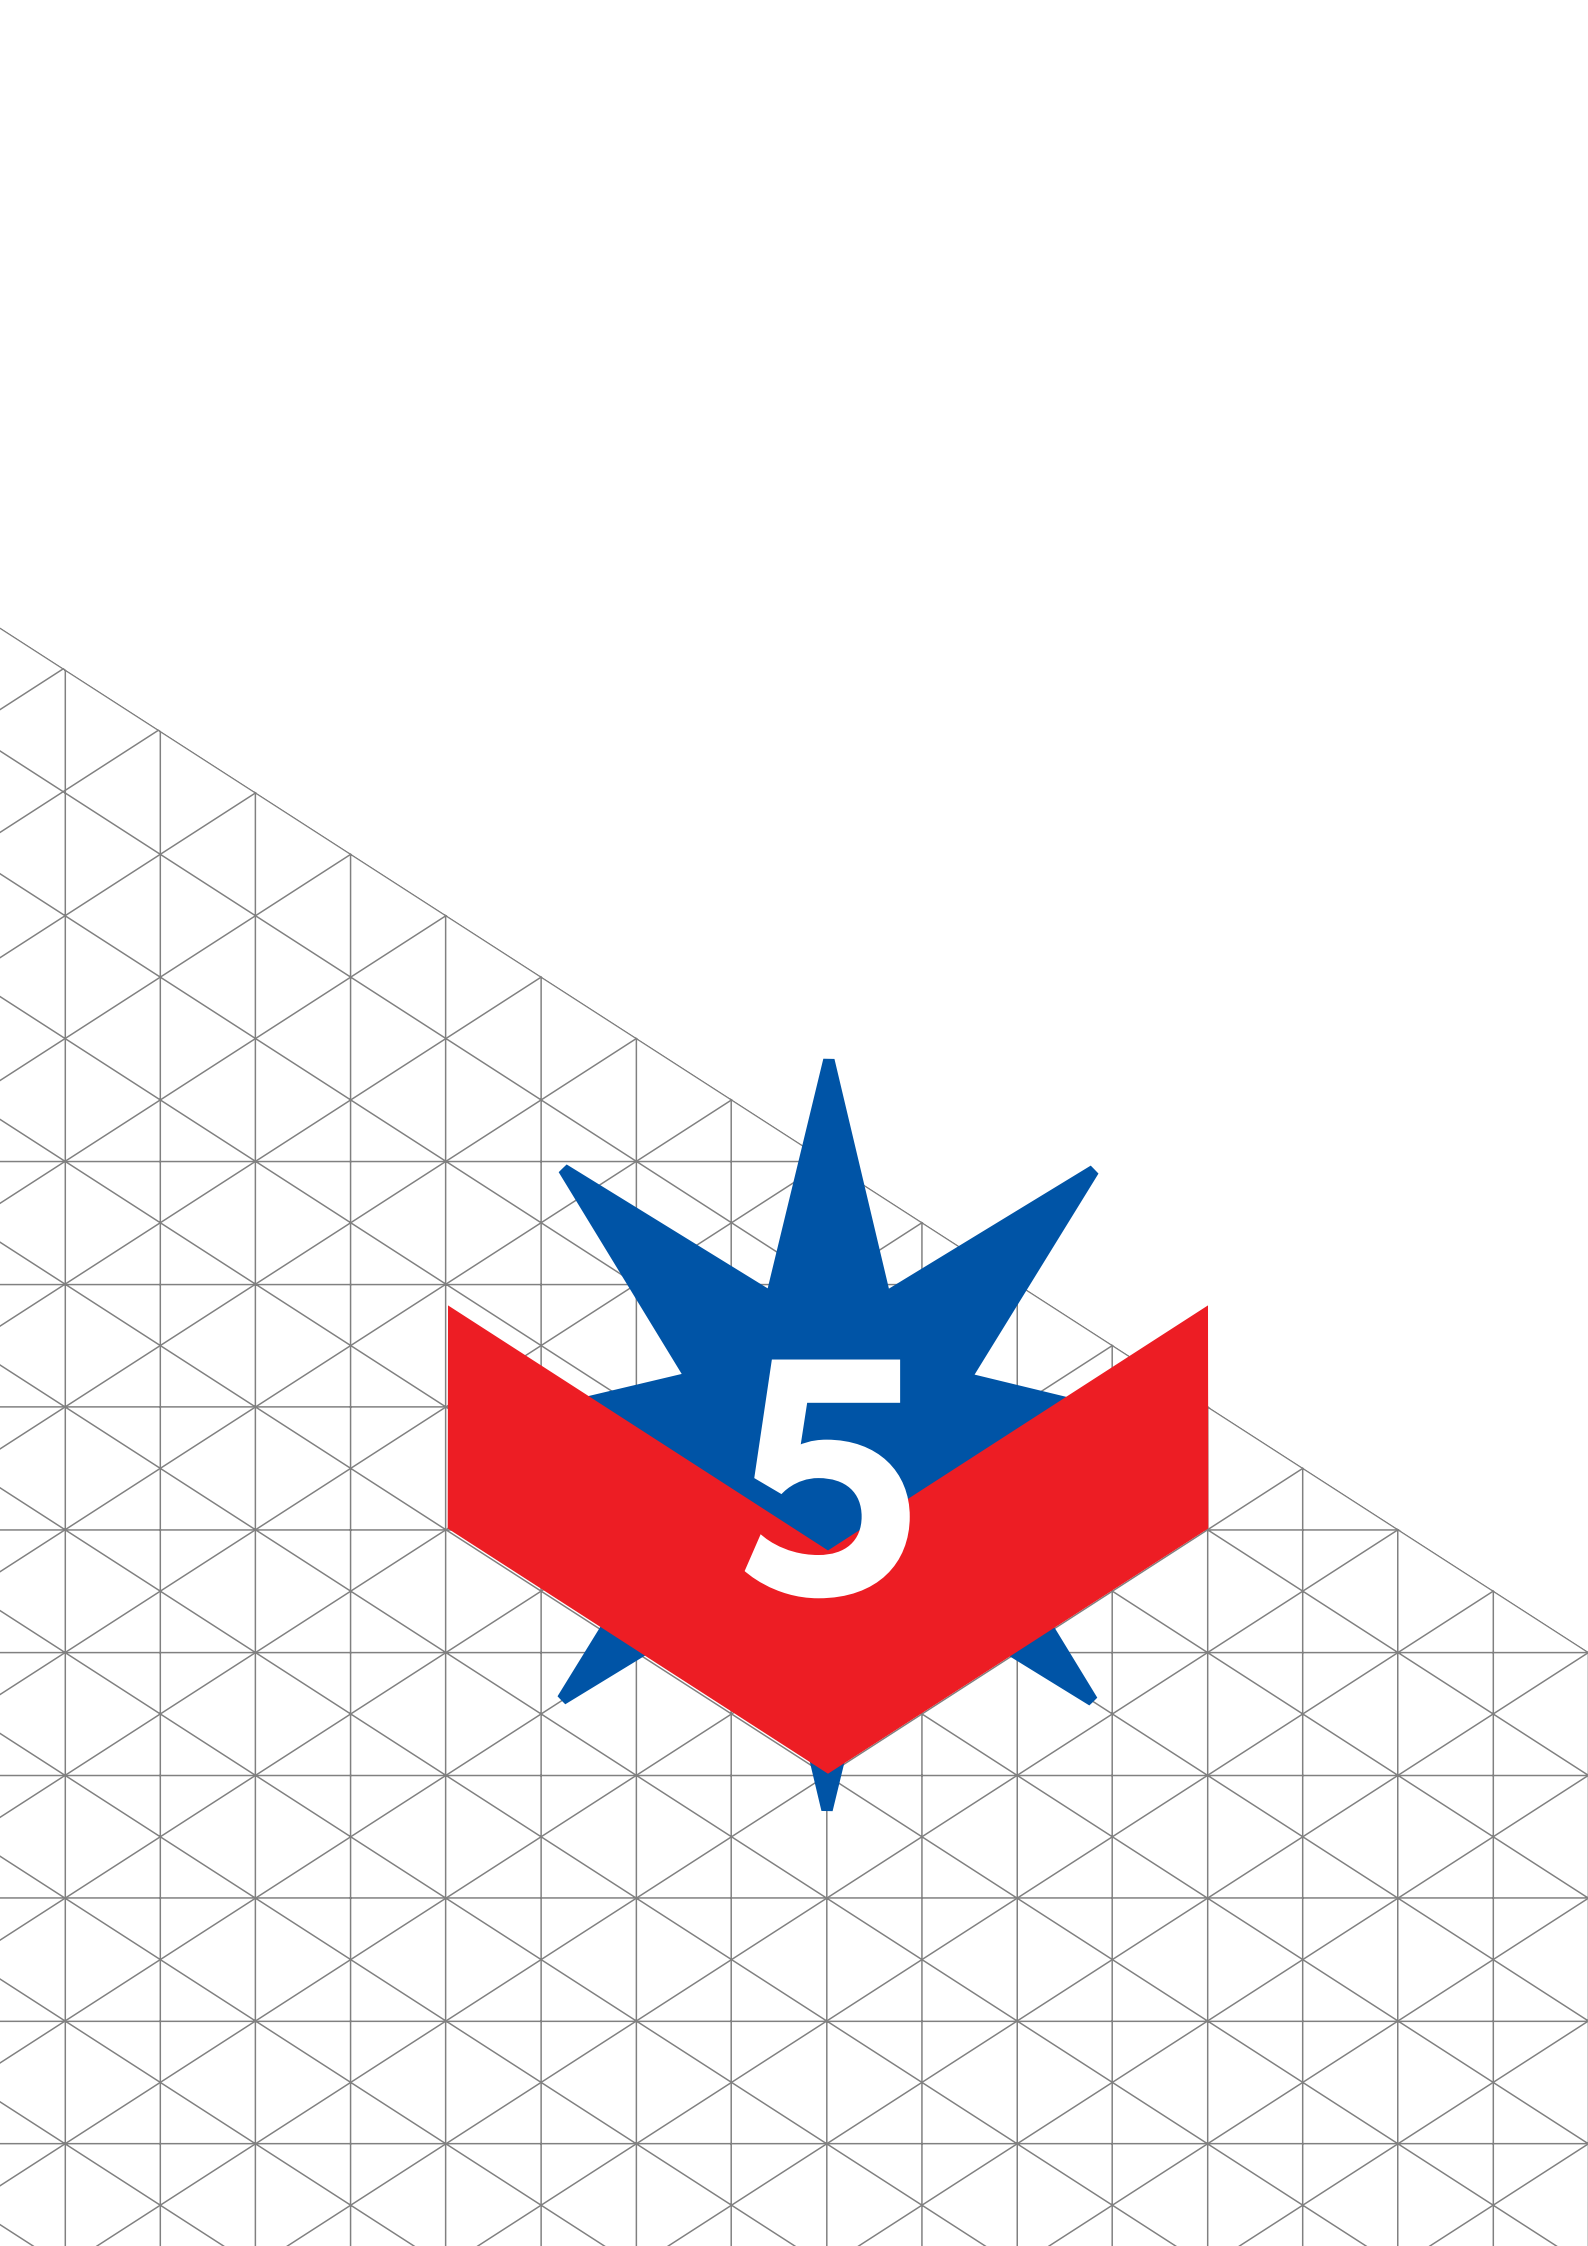

In 2019, the cooperation with the foreign patent offices continued to develop in the framework of the Patent Prosecution Highway program (PPH).

Since the launch of the PPH in 2009, as of December 31, 2019 Rospatent as the Office of Later Examination received 4845 requests for accelerated examination of applications for inventions. General dynamics of the received requests is presented in Table 4.3 of Annex 4 of the Report. Dynamics of the received requests for accelerated examination within PPH program with division into the use of National and International work product is presented in Table 4.4. of Annex 4 of the Report.

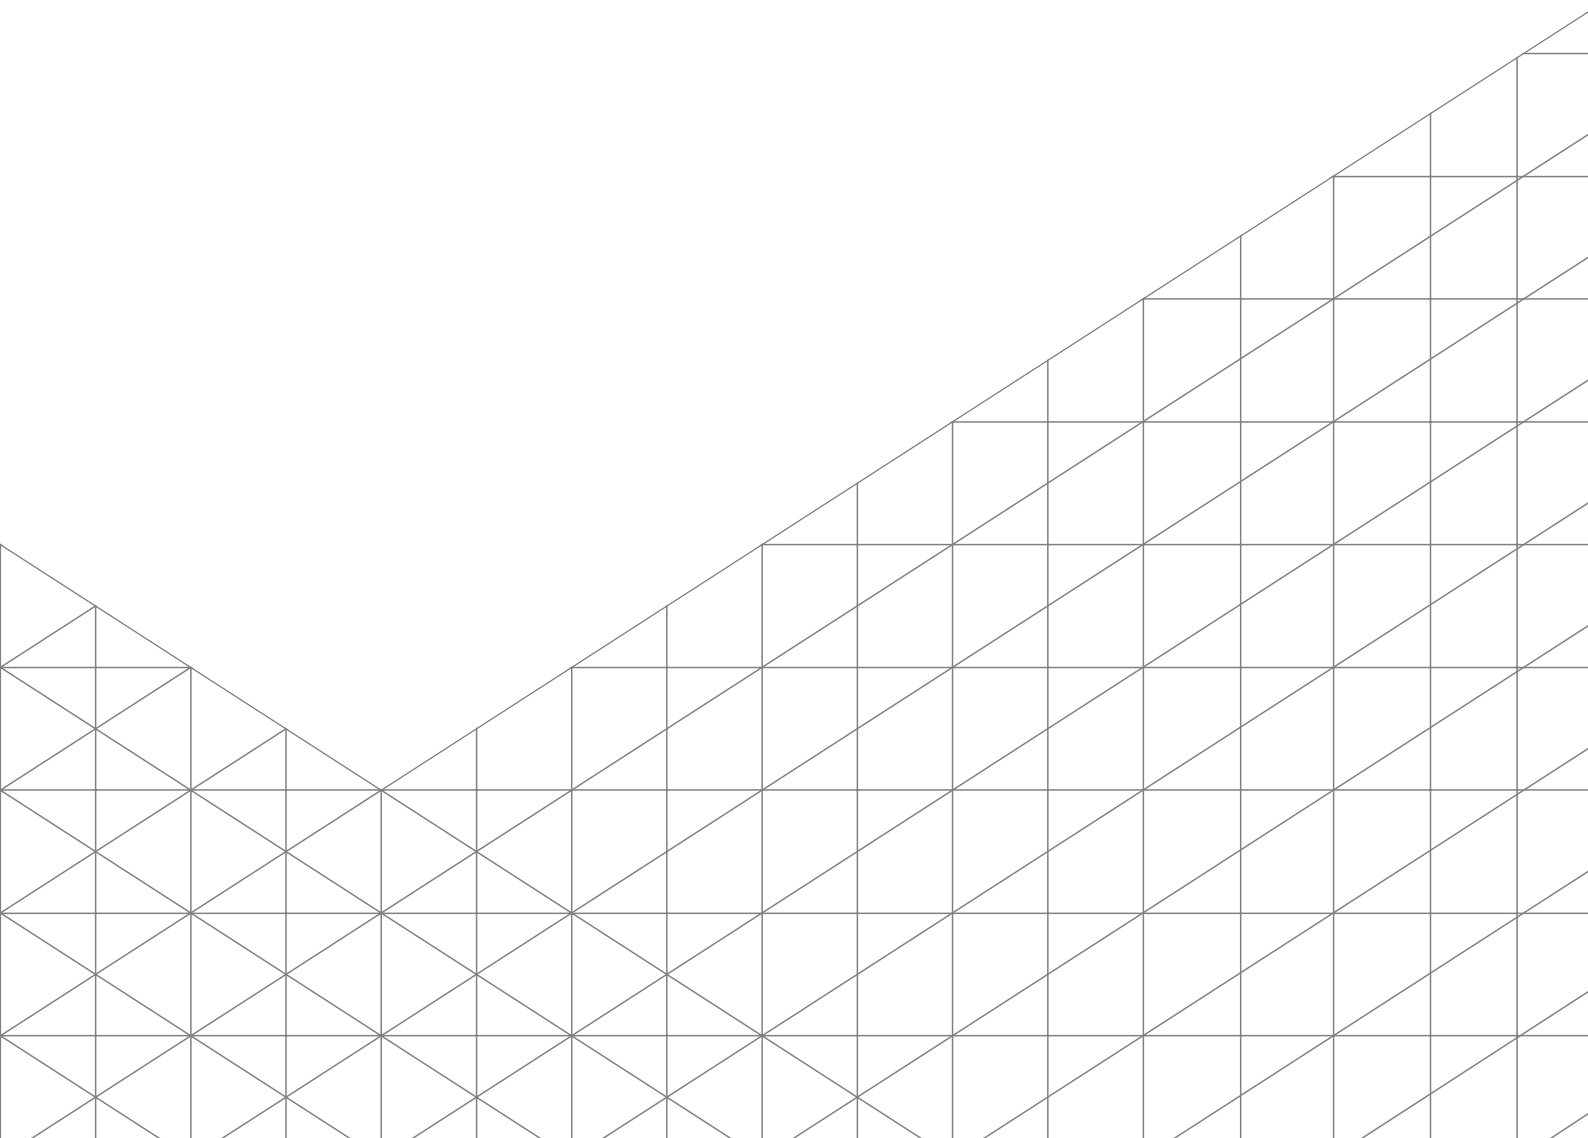

The Memorandum of Understanding on the Patent Prosecution Highway program (PPH) between Rospatent and the Turkish Patent and Trademark Office was signed on April 8 in Moscow on the sidelines of the High-Level Russian-Turkish Cooperation Council.

Rospatent and the Japan Patent Office conduct regular exchange of the data on applications involved in various types of PPH program.

In 2019, Rospatent continued its work on informational support of domestic applicants – conducting of lectures, presentation on the conferences and videoconferences, consultation of applicants and patent attorneys, updating of the Rospatent's website on PPH program.

DIGITAL ROSPATENT

Y. Zubov,

Deputy Head

INTRODUCTION

2019 has become a crucial year for IT services of our Office. New software systems are being developed and implemented along with maintaining the smooth functioning of the existing systems, as well as their continuous upgrade to meet newly introduced and amended regulatory documents. The main features of these systems are the focus on platform solutions and the implementation of end-to-end technologies such as artificial intelligence, big data, and distributed ledgers. We expect that when the transition to new software will be accomplished, the technology of Rospatent's internal work will completely alter – many traditional operations that used to be performed manually by our experts will become completely automated, that will significantly accelerate and improve the quality of the work conducted and the services provided by the Office. Rospatent is becoming more open – we expand the functional

range of our internet resources. Moreover, a number of systems, for example, Information System “the search infrastructure for patent information and means of individualization”, will allow the connection of third-party programs via API, which means that any idea of how to manage a huge amount of information and statistics, can be converted into a program on a device and this program will connect directly to the databases of Rospatent and provide any possible service to its users. Such a program can be developed by anyone who is familiar with the basics of programming and has read the description of the API. We believe this is a big step towards Digital Rospatent – we provide information to innovators, scientists, and interested individuals, and this community by its own means creates convenient tools for working with this information – without delay, red tape and other bureaucracy.

5.1

ROSPATENT'S PARTICIPATION IN THE IMPLEMENTATION OF THE NATIONAL PROGRAM "DIGITAL ECONOMY OF THE RUSSIAN FEDERATION".

Within the framework of federal project "Information infrastructure" of the national program "Digital Economy of the Russian Federation", Rospatent implements activity to create and operate an information system for informatization of IPRs registration and protection procedures.

As a result of this activity implementation, it is envisaged to create by December 2021 14 information systems for informatization of IPRs registration and protection procedures.

In 2019, Rospatent developed and agreed with the expert community (Working Group "Information Infrastructure") 22 technical tasks for the development and commissioning of 11 state information systems (SIS), 3 information systems (IS), 7 software and hardware systems (SHS) and 1 supporting information system (supporting IS).

Basing on the agreed technical tasks, there were conducted relevant competitions and concluded 4 state contracts and 17 regular contracts.

Competition and the conclusion of a state contract for the development of an information system for managing administrative processes of Rospatent are scheduled for 2020.

As a result of 2019, it was planned to create 11 SIS, 2 IS, 7 SHS and 1 supporting IS in the volume of the 1st stage.

2019 results:

1. SIS "Management of formal checks on the possibility for performing legally important actions"

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there are implemented formal checks at the stage of formal examination of applications for registration of trademarks and appellations of origin, as well as a designer of technological regulations for formal checks).

2. SIS "Smart examination system for means of individualization"

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there is implemented a function for search by description by words of trademarks and optical characters recognition of individualization means filed for registration).

3. SIS "Decision-making support system in the field of Intellectual Property"

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there are implemented analytical panels:

- * Director General panel based on information on the execution of a state task,
- * Regional panel based on patent information and reflecting various territorial, temporal, and species sections).

4. SIS for document management

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there are implemented basic functions for managing processes and documents, registration and processing of incoming and outgoing correspondence, as well as functionality focused on the registration procedure of trademarks and appellations of origin).

5. SIS "Single state digital register for results of intellectual activity"

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there is implemented a function that is prescribed by the administrative regulations of Rospatent for recording to the State register the information on registrations of trademarks and appellations of origin).

6. SIS for documents storage management

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there is implemented functioning of system focused on the storage of the information on the current workflow for registration of trademarks and appellations of origin).

7. SIS "Distributed ledger of objects for IPRs protection and means of individualization, occurring in circulation"

The system has been developed and is ready for commissioning in January 2020 in the vol-

ume of the first stage (there is implemented functioning of a system for turnover and management of rights to trademarks).

8. SIS “Single information workspace for internal interaction”

There is implemented a function of employee workspace with the integration of technological user services such as e-mail box, access to network file system.

9. SIS for integration and management of legal and reference information

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there is implemented functioning of subsystems for internal interaction on the integration of information systems and software services for maintaining legal and reference information as well as the administration).

10. SIS “Omni-channel interaction of Rospatent with stakeholders when providing public services, services under international agreements and treaties, publication of publicly available information on activities in the field of registration and protection of intellectual property in the form of open data”

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there is implemented functioning of subsystem “Personal account”, subsystem for maintaining omni-channel interaction, and administration subsystems for supporting seven public services:

- * State registration of transfer under a contract of an exclusive right to an invention, utility model, industrial design, trademark, service mark, registered integrated circuit topography, computer program, database;
- * Amendment to state registers of inventions, utility models, industrial designs of the Russian Federation, as well as to patents for an invention, utility model, industrial design;
- * Extension of the exclusive right to a trademark, service mark, collective mark;
- * Restoration of a patent for an invention, utility model, industrial design;
- * Amendment to state registers for trademarks and service marks, appellations of origin of the Russian Federation, to the List of well-known in the Russian Federation trademarks, as well as to certificates for a trademark, service mark, collective mark, for an exclusive right to appellation of origin).

11. SIS for supervision of the use of rights to results of intellectual activity

There is implemented a function of subsystem for preparation of control and supervision activities, and a subsystem for administration.

12. IS “Infrastructure to search for patent information and means of individualization”

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there is implemented a prototype of an open search platform and a prototype of a search service. The main purpose of these prototypes is the testing and approbation of technological solutions that form the basis of the system).

13. IS “Management of centralized maintenance and support of information technology infrastructure and users”

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there is implemented user maintenance requests management).

14. The procurement and commissioning of the supporting hardware and software systems were made:

- * “System of secure remote access”;
- * “System for ensuring the continuity of operation”;
- * “Integrated information security system”;
- * “Software-defined data processing center”;
- * “Basic information technology systems and services”;
- * “Automated workplaces of FIPS”;
- * “Automated workplaces of Rospatent”.

15. Supporting IS for digitalization

The system has been developed and is ready for commissioning in January 2020 in the volume of the first stage (there is implemented functioning of a system focused on the digitalization of information contained in incoming paper materials of applications and correspondence on registrations of trademarks and appellations of origin).

The above-mentioned projects focus on the establishment of a comfortable information environment in the field of IP for citizens, businesses, state organizations, and federal executive authorities.

The implementation of these services will allow applicants interacting with Rospatent

absolutely digitally, including the issuance of digital protection documents.

It is also worth noticing that SIS “Decision-making support system in the field of Intellectual Property” will make it possible to conduct analysis of patent activity based on various indicators in Russia and all over the world, in particular, in terms of priority areas for the development of science and technology. This system will allow forecasting the development of priority areas of the economy both in Russia and its distinct regions, as well as assessing the progress in reaching set targets of national and federal projects relating to the field of IP.

5.2.

DEVELOPMENT OF AUTOMATED SYSTEMS AND ELECTRONIC SERVICES.

Databases used for examination purpose

5.2.1. Development of automated systems and electronic services

In 2019, along with activities of Federal project “Information infrastructure”, there were conducted activities aimed at reducing the time for the provision of state services on state registration of objects for IPRs protection; activities aimed at increasing the indicator, reflecting “a share of citizens, using digital mechanism of public services”. Further work on optimization of the Office workflows and the development of electronic services will allow achieving significant results.

As a result of the automation of technological processes in the digital document management system for the examination of inventions and utility models in 2019, it became possible to switch to the automatic generation of search reports in the ST.96 format in order to further switch to the publication of relevant information in a structured form, to complete work on fully functional support of technological processes providing examination and interaction with applicants on electronic applications for inventions and utility models, to accomplish work to bring decisions on the recognition of applications as withdrawn in accordance with Decree of the Government of the Russian Federation of September 23, 2017 No. 1151.

The work in 2019 on automatic verification of goods and services lists during examination process of the claimed mark within the frameworks of the system for digital workflow with applications for trademarks allowed increasing the efficiency of experts work in terms of accuracy of automatic terminology check and visual representations of the results of automatic verification of goods and services lists.

In 2019, the work aimed at increasing the indicator, reflecting “a share of citizens, using digital mechanism of public services” was continued. The conducted activities were focused on the improvement of functional range of personal accounts for electronic services and information user support, including answers for questions, incoming through the technical support service. There were conducted relevant regular meetings on how to work with digital services, to update the information, published within the “Filing application” section at FIPS webpage <https://new.fips.ru/podacha-zayavki>.

The above-mentioned activities allowed to achieve in 2019 that 81% of all national applications were filed electronically.

Users become more interested in e-filing mechanisms and digital interaction, this brings the increased number of views under tutorial videos, posted within the “Application filing” section, that exceeded 15800 views.

In 2019, a transition was made to automatic registration and uploading of incoming correspondence with an electronic signature from personal accounts of the FIPS webpage to filing systems on applications for inventions, utility models, trademarks, industrial designs. As a result, labor costs for registration and processing of secondary correspondence are reduced, time for delivery of documents to relevant expert divisions is reduced, possible mistakes of operators when manually registering documents are excluded.

In 2019, there was expanded the list of services provided to users of the Technology and Innovation Support Centers for filing applications for industrial property and individualization means, namely for a utility model, an appellation of origin and / or an exclusive right to a previously registered appellation of origin.

In 2019, the Centre for data preparation conducted the work related to optimization of paper documents processing for their digitalization, to the improvement of electron-

ic documents quality for their further use within the FIPS internal systems, to upgrade of subsystem for user control (logging in/out, two-factor identification), to the development of new schema for bibliographic data processing, and to the optimization of subsystem for reporting and monitoring.

In 2019, the automated workflow system for international registrations of industrial designs under the Hague agreement was implemented.

In 2019, the following electronic registers were filled with records: the State register of trademarks and service marks of the Russian Federation (ESR of TM), the State register of appellations of origin of the Russian Federation (ESR of AoO), the List of well-known trademarks in the Russian Federation (List of WTM), the State register of inventions (ESR of IN), the State register of utility models (ESR of UM), the State register of industrial designs (ESR of ID), the Register of computer programs (ER of CP), the Register of databases (ER of DB), the Register of integrated circuit topographies (ER of ICT).

As of December 31, 2019, digital registers contained:

- * ESR of TM – 664064 registrations;
- * List of WTM – 210 registrations;
- * ESR of IN – 440140 patents;
- * ESR of UM – 118157 patents;
- * ESR of ID – 53273 patents;
- * ER of CP – 139821 registrations;
- * ER of DB – 13448 registrations;
- * ER of ICT – 1281 registrations.

5.2.2 Databases used for examination purpose

In 2019, experts used the PatSearch information retrieval system to examine inventions and utility models. The PatSearch system is a professional search system for examiners of the Patent office conducting searches during the examination of inventions and utility models. The system implements an extended set of functions and service options, taking into account the importance of conducting a patent search for various science and technical fields.

Arrays of patent documents of the USSR and the Russian Federation, CIS countries, World Intellectual Property Organization, European Patent office, USA, Germany, Great Britain, France, Austria, Australia, ARIPO, OAPI, Korea, Japan, China, and other countries are available in the system. The system contains more than 200 million patent documents.

In 2019, the system functions to conduct a search for amino acid and nucleotide sequences in the European data bank EMBL was improved. Moreover, a new array of LexisNexis patent documents was uploaded. This provided experts of the Russian Patent office with an opportunity to conduct a search for patent documents of the world patent collection in English. The work on the implementation of artificial intelligence to conduct a patent search has proceeded. The received results were integrated into the search system.

Currently, access to the internal system PatSearch besides Rospatent experts was granted through secured channels to Patent offices of the Republic of Kazakhstan, Moldova, the Kyrgyz Republic, the Eurasian Patent office, and the State Corporation Rosatom".

5.3.

USE OF ROSPATENT INTERNET RESOURCES. OFFICIAL AND INFORMATIONAL PUBLICATIONS OF ROSPATENT AND FIPS

5.3.1. Development of Rospatent and FIPS websites

The number of published materials on the websites of Rospatent and FIPS increased in contrast to 2018: new documents – by 115%, modified documents – by 92%.

The official website of Rospatent (www.rupto.ru) focuses on the provision of state services in the field of intellectual property, informing on legal regulation of issues related to supervision, control, and functioning of the Russian system for protection and enforcement of intellectual property.

In 2019, the following sections of the website were created in the Russian version: "Recommendations on IP management in the regions", "Legislative site map", "Target programs", "Open Rospatent tools", "Rospatent annual report for 2018", "Work with reference groups", "Staffing", "Civil protection", "Register of patent attorneys in the Russian Federation", "Schedule of qualification examinations for patent attorneys in the Russian Federation", "Tutorials", "Methodology of Project office FIPS for the development of patent landscapes", "II International conference "Digital transformation: Focus on IP", "International day of Intellectual property – 2019",

“XXIII International Conference of Rospatent”, and other.

The following sections were updated: “Patent attorneys”, “AoOs and Regional brands”, “Collegial and Deliberative bodies”, “Countering corruption”, “Structure and administration”, “Public council”, “Control and supervision in the field of legal protection and use of results of intellectual activity, created at the expenses of federal budgetary funding”, “Glossary”, “Hague System”, “Patent information products”, “Information products and services” and other.

The following surveys were published within the sections “Surveys”: On the assessment of quality and availability of public services, on the convenience of the Rospatent webpage rendering and quality of published information, on the arrangement of qualification exam. Moreover, there is information on the share of users satisfied with the quality of the search itself and the information, received as a search result.

The section “Multimedia – Videos” contains 40 videos, including 21 tutorials, 14 reporting videos, 5 online webcasts of Rospatent’s events.

In 2019, the Rospatent website was visited by 62043 unique users monthly, which was 40% more visitors in contrast to 2018.

The FIPS official website (www.fips.ru) was actively developed along with the Rospatent website in 2019. It provides access to a wide range of databases, including official electronic bulletins. The following new sections were created on the FIPS website:

“Appeal to patent disputes chamber”, “The information on educational organization: open vacancies for enrolment or transfer”, “The working language”, “Materials for self-education”, “Quiz on Intellectual Property basics”, “Presentations of the Project office”, “XXII Moscow International Salon of Inventions and Innovative Technologies “Archimedes”, “XXIII International Conference of Rospatent: “Role of Intellectual Property in a breakthrough scientific and technological development of the society”. The following sections were modified “Patent disputes chamber”, “Statistics on Intellectual Property use”, “Application filing”, “Glossary”, “About us”, “Scientific activity”, “Structure and administration”, “Innovative library as a center for working with scientific youth”, “The information on educational organization: Documents”, “Learning”, and other.

The following subsections were updated within the section “Russian patent and technical library”:

“Projects of the library: Webinars”, “The guideline on patent collection of the FIPS Department, Russian patent and technical library, and its internet resources”, “New incoming patent and legal as well as vocabulary reference documents”, “Recommendations on the list of necessary methodological, legal, patent literature, documents, and other materials”, “Internet Navigator on Patent Information Resources”, “Bibliographic indexes and lists”, “Lists of necessary bibliography for Russian regions”, “The list of WIPO publications”, “Patent Information News”, “Russian translation of the EPO publications”, etc. The function to conduct a search for patent and legal, as well as for scientific and technical documents in the digital catalogue was updated.

In 2019, the FIPS Project office created a webpage “Patent Analytics” (<https://patent-analytics.fips.ru/>), the content and structure of the mini-site reflect work in the areas of patent analytics, patent search, intellectual property management, and project management.

The sites of Rospatent and FIPS became more functional, access to the most popular services and patent information resources became more convenient, a number of electronic services were updated. The updated version of the Personal Account service on the FIPS website provides a number of new features: registration; filing an application to grant a patent for an industrial design or a certificate of state registration of a computer program or a database immediately through the Personal Account; filing an international application to grant a patent for international industrial design under the Hague agreement; work with previous drafts of applications and history of earlier filed applications (only for applications filed through the new version of “Personal Account”); automatic registration of incoming correspondence with an electronic signature on applications for inventions and utility model (Earlier filed on paper or via service PatDoc), on applications for TM, AoO (Earlier filed on paper), on applications for ID/CP/DB earlier filed via the new version of “Personal Account”. A new form of electronic appeal to the Patent Disputes Chamber was published. The opportunity to submit applications for inventions and utility models through the “ARM Registrar” service using a qualified electronic signature is provided for all users.

5.3.2. Rospatent Internet Search resources

The Internet resources of Rospatent contain the following databases:

- * database of published applications for inventions (contains information about 541 thousand applications for inventions of the Russian Federation from 1994 to 2019 inclusively);
- * full-text database of Russian patents for inventions (contains information on 822 thousand descriptions of patents for inventions of the Russian Federation from 1994 to 2019 inclusively);
- * abstract database of Russian inventions (contains information on 822 thousand abstracts to patents for inventions from 1994 to 2019 inclusively);
- * abstract database of Russian inventions in the English (contains information about 717 thousand abstracts to patents for inventions from 1994 to 2019 inclusively);
- * “Perspective Inventions” database (contains information on 2388 patents for inventions recognized by FIPS as promising);
- * Retrospective database of Soviet and Russian patent documents in facsimile form (contains information on 1,431 thousand patent documents for inventions from 1924 to 1993 inclusively);
- * Full-text database of Russian utility models (contains information about 195 thousand Russian certificates and patents for utility models from 1996 to 2019 inclusively);
- * abstract database of Russian utility models (contains information about 195 thousand abstracts to Russian certificates and patents for utility models from 1996 to 2019 inclusively);
- * industrial design database (contains information on 83 thousand industrial design patents from 1993 to 2019 inclusively);
- * database of Russian trademarks (contains information about 697 thousand Russian certificates for trademarks from 1925 to 2019 inclusively);
- * “Appellations of Origin” database (contains information on 762 Appellations of Origin and certificates for the right to use them from 1997 to 2019 inclusively);
- * “Well-Known Trademarks in Russia” database (contains information on 210 trademarks recognized by FIPS as well-known);
- * database of computer programs (contains information on 105 thousand registered computer programs from 2013 to 2019 inclusively);
- * database of registered databases (contains information on 13.2 thousand registered databases from 2013 to 2019 inclusively);

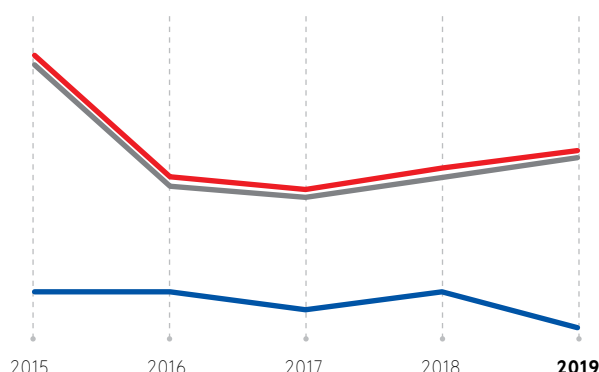

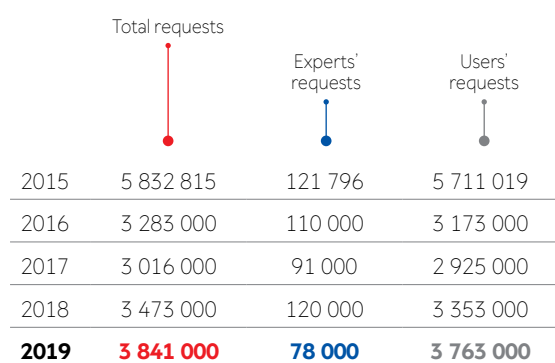

- * database of integrated circuit topographies (contains information on 1450 registered integrated circuit topographies from 2013 to 2019 inclusively; monthly update);
- * “International Patent Classification” database (IPC);
- * “International Classification of Goods and Services” database (ICGS);
- * “International Classification for Industrial Designs” database (ICID).

User work with Information Retrieval System (IRS)

Within the framework of the agreements on cooperation between Rospatent and relevant organizations in 2019, they had access to:

- * to full-text databases of inventions and utility models:
 - 153 institutions within the framework of the program of Rospatent cooperation with the regions of the Russian Federation;
 - 36 institutions involved in the implementation of the state project on the development of new technologies;
- * to full-text databases on inventions and utility models and databases on industrial designs:
 - 207 technology and innovation support centers;
 - 2 organizations of the “Rostech” State Corporation;
- * to trademark databases:
 - 8 organizations of the Federal Customs Service;
 - 3 users of the Federal Service for Alcohol Market Regulation;
- * to all databases of FIPS:
 - 189 institutions of the Federal Bailiff Service;
 - 717 institutions of the Ministry of Internal Affairs;
 - 101 institutions of the Federal Antimonopoly Service;
 - 16 institutions of the Ministry of Defense of the Russian Federation;
 - 96 institutions of the Federal Tax Service;
 - 60 users of the Court for Intellectual Property Rights;
 - 2 users of the Federal Agency for Procurement of Weaponry;
 - 2 institutions of the Federal Customs Service;
 - 12 users of the Federal Service for Supervision in the Sphere of Telecom, Information Technologies, and Mass Media.

Figure 1
IRS Requests distribution

For third-party users the following databases are publicly available:

- * for inventions:
 - reference abstract databases (DBs) in Russian and English;
 - DB of published applications for inventions;
 - “Perspective Inventions” DB;
 - full-text database containing published information on patents for inventions of the Russian Federation, starting with No. 2503161;
 - IPC DB;
- * for utility models:
 - DB containing published in bulletins “Inventions. Utility models” information on patents for utility models of the Russian Federation, starting with No. 136275;
 - reference database;
 - DB IPC;
- * for trademarks:
 - DB containing information on trademarks, service marks of the Russian Federation, beginning with No. 501608, published in

the bulletins “Trademarks, Service Marks and Appellations of Origin”;

- ICGS DB;

- * for industrial designs:
 - DB containing information on patents and industrial designs of the Russian Federation published in industrial design bulletins, starting with No. 87456;
 - ICID DB.

In 2019, internal and external users made more than 3841 thousand queries to Internet search resources through the IRS, namely:

About 78 thousand queries made by internal users of the DB;

More than 3763 thousand queries made by external users of the DB.

Figure 1 indicates the distribution of search requests number made through IRS for the period 2015–2019.

Figure 2 shows the distribution of the number of queries to the search engine in 2019 into objects for IPR protection.

2%	79 000	Classifiers

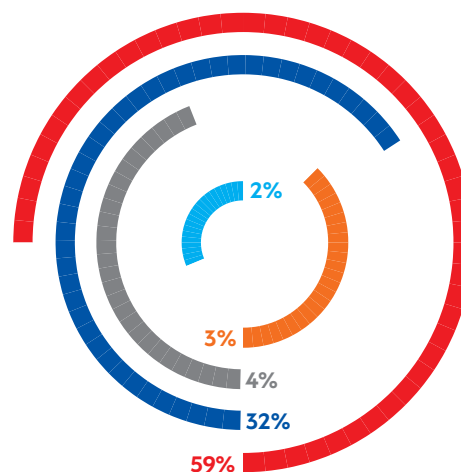

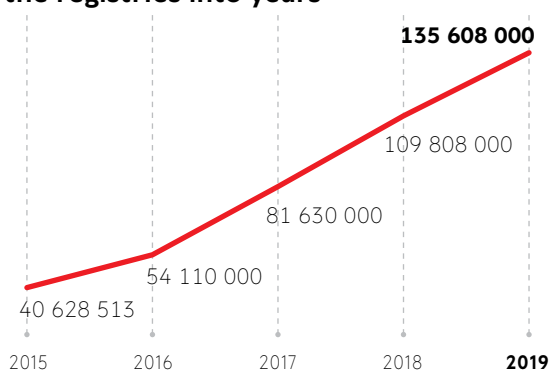

Figure 3
Distribution of the number of requests to the registries into years

5.3.3 User access to “Open Registries” of Russian patent documents

Users have free access to all documents contained in the “Open Registries” (hereinafter – the Registry).

In 2019, users viewed the page “Open Registries” more than 135,608 thousand times, of which:

- * More than 1778 thousand views by internal users;
- * More than 133830 thousand views by external users.

Figure 3 shows the distribution of the number of requests to the registries as per years.

Figure 4 shows the distribution of the number of requests to the registries into objects for IPRs protection.

5.3.4. Official Rospatent publications on the Rospatent and FIPS web-portals

In 2019, Rospatent continued issuing official bulletins that are regular electronic publications

and are posted on the FIPS and Rospatent websites in the “Official Publications” section.

During the year, the following 84 official bulletins were posted on the FIPS website: “Inventions. Utility models” – 36 publications; “Trademarks, Service marks and Appellations of Origin” – 24 publications; “Industrial Designs” – 12 publications; “Computer programs. Databases. Integrated Circuit Topographies” – 12 publications. In 2019, more than 3305 thousand user requests to Rospatent bulletins were recorded.

In the reporting year, the continuous publication of data on performed legally important actions in relation to objects for IPRs protection, which began in 2017, proceeded as the data is recorded into the electronic State Register in real-time.

Along with official publications on objects for IPRs protection in 2019, Annual Report of Rospatent for 2018 and the texts of international classifications were prepared and posted on the Rospatent and FIPS websites (section “Official Publications”/“International Classifications”).

In the “Official Publications” section, a function to search for official records by document number, type of intellectual property, type of document (application, registration, reissue, notification), class and filing date. For the convenience of viewing documents, users are provided with additional features. Moreover, RSS subscriptions have been implemented on the FIPS website in the “Official Publications” section, as a part of the development of a system for selective information dissemination.

During 2019, more than 200 thousand publications on registered objects for IPRs pro-

1%	1 221 000	CP+DB+ICT

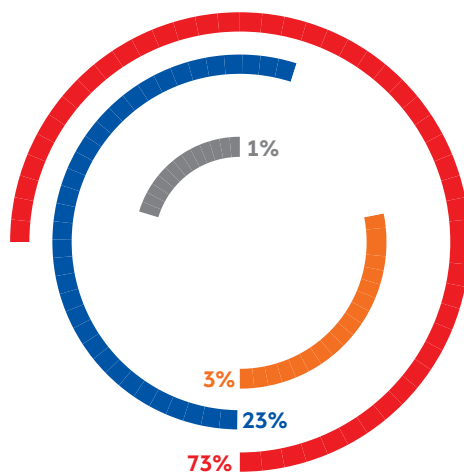

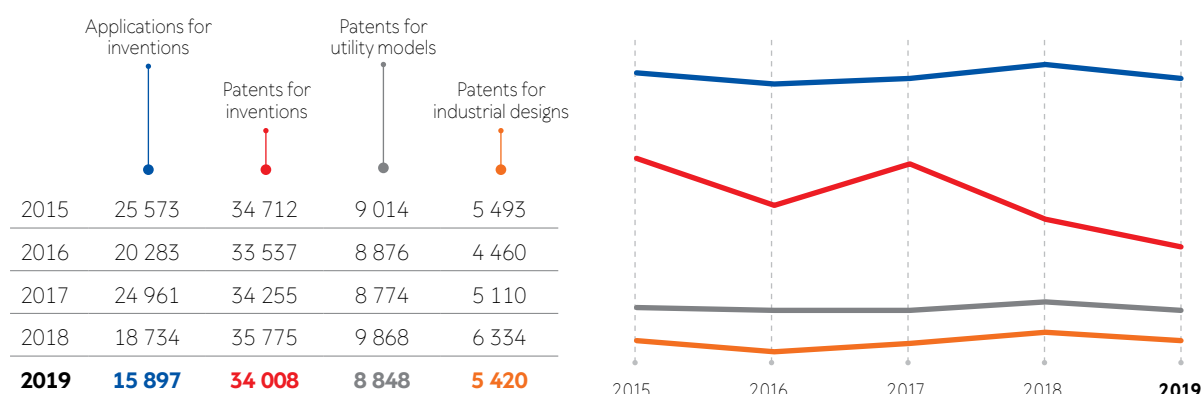

Figure 5
Number of information publications on inventions, utility models and industrial designs

tection and filed applications for inventions, trademarks and appellations of origin were posted in the official Rospatent bulletins.

In addition, the publication of notices on changes made to the State registries of inventions, utility models, industrial designs, trademarks, service marks, appellations of origin, registries of computer programs, databases and integrated circuit topographies continued in the official Rospatent bulletins within the section "Notices".

Table 5.1 of Annex 5 to this Report and Figures 5–8 contain statistical data on the amount of published information for the recent 5 years distributed into objects for IPRs protection.

Table 5.1 indicates that the total amount of information published in the Rospatent official bulletins has increased by 22.3% in contrast to 2015.

The growth of total number of publications in 2019, as in previous years, resulted mostly from the increasing number of published applications for trademarks, some 10 thousand publications more than in 2018.

In 2019, there was a significant increase in the number of publications on registered appellations of origin – 49 publications, which is more than 3 times higher than in 2015.

An increase in the number of applications for inventions, utility models and industrial designs examined by experts in 2018 and a decrease in the average time for examination of applications led to an increase in the number of registered patent law objects and, consequently, to an increase in the number of published information on the grant of patents. The number of publications on these objects in 2019 was at the average level of the period 2015–2017.

Figure 6
Number of information publications on filed applications for trademarks, appellations of origin, and on registration of trademarks and service marks

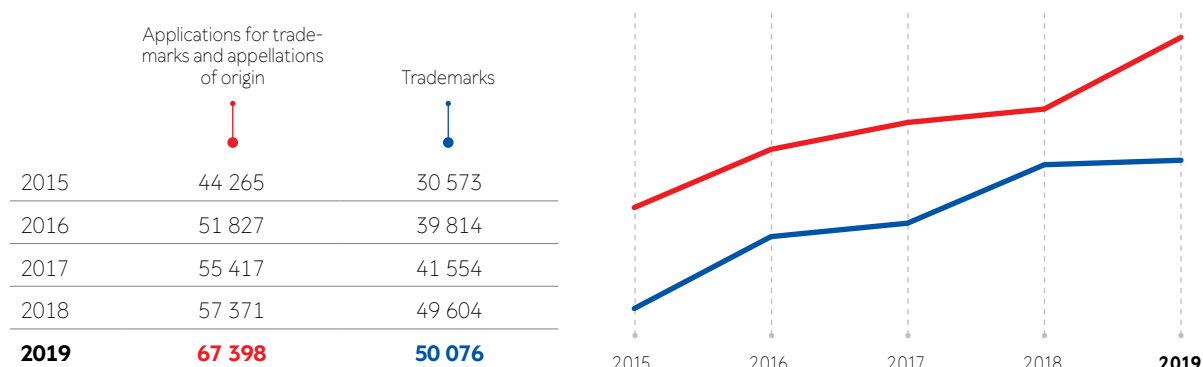

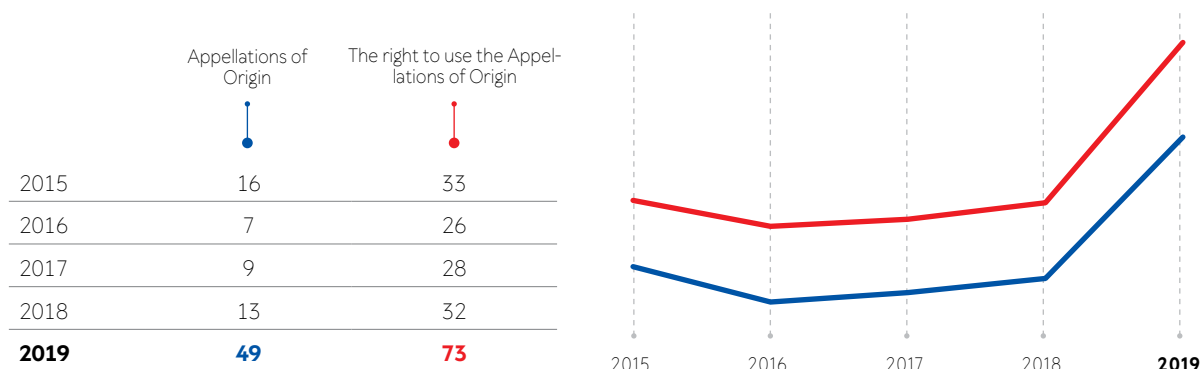

Figure 7
Number of information publications on registrations of appellations of origin and on granting rights to previously registered appellations of origin

During the last year, the number of published information on applications for inventions continued to decrease. This is connected with the decrease in the number of filed applications for inventions for the period 2017–2018.

In 2019, the number of published information on the registration of computer programs, databases and integrated circuit topographies increased: in contrast to 2015, the growth was more than 30%, 40% and 80% for computers, databases, and ICTs, respectively.

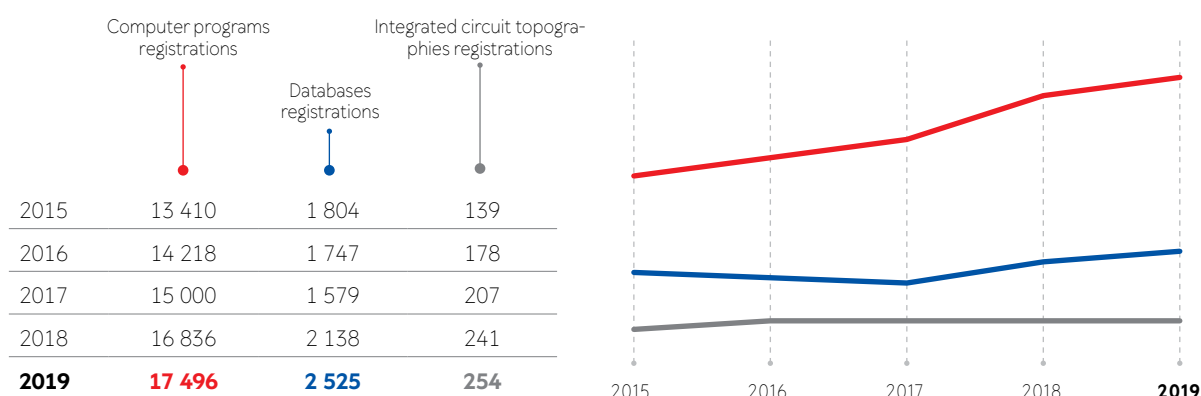

Search databases and Open registries were formed on the basis of official publications in Rospatent bulletins published on the FIPS Internet portal. They contain information on Russian industrial property objects indicating their legal status, as well as FIPS information publications.

5.3.5. FIPS Information publications based on official Rospatent information

Along with the publication of the official patent information of Rospatent on the internet portal, FIPS continued to issue and disseminate information products in 2019, including bulletins in electronic form on CD and DVD carriers. These publications were equipped with the latest version of the MIMOZA information retrieval system. Also, users were provided with a wide range of printed scientific-methodical and reference materials on current issues of intellectual property.

In 2019, users were granted access to receive informational publications, bulletins first, via electronic communication channels through an FTP protocol. The format of publications goes in compliance with the bulletin on disk but electronic data exchange ensures faster

Figure 8
Number of information publications on registration of computer programs, databases and integrated circuit topographies

receipt of the bulletin's publications, as well as simplification of further work with information in a single information array.

For organizations establishing and hosting their own local patent collections in 2019, there were provided annual sets of inventions descriptions (ID) on DVD, since 1924. Besides that, retrospective sets of utility models descriptions (since 1994), sets of information on industrial designs (since 1993), and sets of information on trademarks (since 1991) were provided. In 2019, the retrospective sets of documents of the previous year on all objects for IPRs protection were also offered to subscribers with the option to receive them via FTP protocol.

Quarterly there was issued on DVD an information retrieval apparatus (IRA) that contained abstract information with references to full invention description and was published on the FIPS web portal. This information product provided complex of patent information deep analysis in RSA "MIMOZA" with quick access to the documents via the Internet.

Totally, in 2019, users were provided with more than 400 sets of the above-mentioned publications (see Table 5.2 of Annex 5 to the Report).

In 2019, about 200 business entities of the Russian Federation purchased information products primarily to create their local patent collections in the interests of the users (see Table 5.3 of Annex 5 to the Report).

Organizations and enterprises, conducting innovative activity (scientific, industrial) remain active users among general subscribers of the information products. In 2019, significant patent information arrays were sent on disks to Russian active TISCs in the regions (see Table 5.4 in the Annex 5 to the Report).

Moreover, in 2019, the services were actively provided to foreign users – international providers of patent information that in some cases boosted the range of purchased databases.

The distribution of the subscribers of the Russian Federation into the regions is introduced in Table 5.5 of Annex 5 to the Report. The most active users among regions remain the Central and Volga regions, representing almost 65% of consumers.

Besides publication and distribution of information products based on official information, FIPS produced printed materials for

various events organized by Rospatent and FIPS.

Thus, in 2019 it was produced in total 75 thousand copies of more than 400 different information, advertising and methodical materials (brochures, booklets, notebooks, presentations, etc.) to conduct activities of Rospatent and FIPS (Forums, conferences, workshops, etc.) both in the capital and in the regions.

In 2019, there was issued Rospatent's Annual Report for 2018, a brand-new issue on Rospatent's activity "Rospatent: Trends. Goals. Tools", and the third book "History of national invention and patent business: past and present" – "State intellectual property protection system in the Russian Federation in 1992–2018" was prepared to be issued.

The Prospectus of publications and databases for 2020 was issued and distributed on paper. The prospectus was published on the FIPS website in the "Patent Information Products" section.

5.4.

DEVELOPMENT OF STATE PATENT COLLECTION AND INFORMATION SERVICES BASED ON IT

The most important part of the intellectual property system is information support and services for applicants, right holders, patent attorneys and representatives of the business community. One of the main tasks being resolved within the frameworks of this process is the maintenance, filling and development of the State Patent Collection (SPC), as well as providing convenient and reliable access to it for a wide range of users.

In 2019, the volume of the State Patent Collection amounted to 142.1 million copies. The implementation of the project on the inclusion of the national patent documents from the State Patent Collection into the National Electronic Library (NEL), which allowed users to open a new channel for accessing patent information not only for conducting a patent search but also for solving scientific and educational tasks. In order to expand the channels of access to patent information in 2019, an array of national patent documents was published at the Scientific Electronic Library "elibrary.ru", Russia's largest information and analytical portal in the field of science, tech-

nology, medicine, and education as well as at the service “Yandex.Patents” within the frameworks of the joint projects of Rospatent and Yandex, started in March 2019.

During the past year, the automated library system (ALS) of the Russian patent and technical library of FIPS based on the library automation system (SAB) “Irbis64” was put into operation. Search and service capabilities were expanded, integration and posting on the FIPS website of the electronic catalogue of patent and legal as well as scientific and technical documents. The work on automation of the Library activities using barcoding and radio frequency identification has been initiated. In order to ensure the preservation of the SPC through mass neutralization of the acidity of the paper, a retrospective array of national patent documents with a total weight of about 7 tons was processed.

State Patent Collection

The State Patent Collection (hereinafter – SPC) is a set of information sources that are systematized and supplied with an informational retrieval apparatus (hereinafter – IRA), relating to all industrial property objects on all types of carriers, as well as to registered computer programs, databases and integrated circuit topographies, including patent documents, patent-associated, patent-legal, regulatory and methodological, scientific and technical and reference literature.

As of December 31, 2019, the SPC contains 142.1 million copies. The increase in 2019 amounted to 6.6 million documents, which is 500 thousand documents more than in 2018. A significant increase is associated primarily with an increase in the incoming patent documents from foreign Patent offices. The share of documents submitted to the SPC

in electronic form increases annually: by the end of 2019, it accounted for 67%, which is 1.7% more than in 2018.

The SPC is currently provided both on tangible carriers (collections on optical disks, paper copies, and microcarriers) and in electronic form (PatSearch system). The functionality of this system is primarily intended for organizing the work of experts. In the computer class of the Library, this system can be used by all categories of users with some restrictions (access to materials of national applications is not provided). Users are also granted access to remote patent and non-patent databases on the basis of contracts concluded with the owners of the resources.

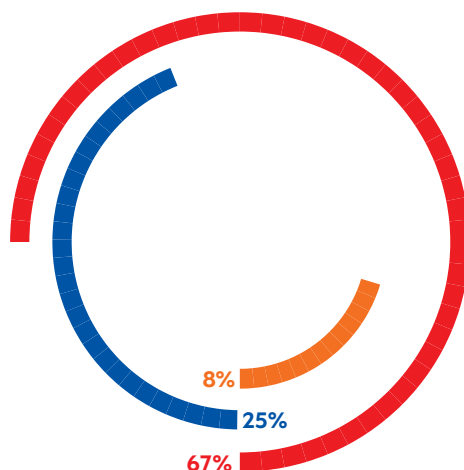

In terms of the formation and development of the SPC, in 2019, FIPS identified the following tasks:

- * ensuring the completeness and quality of the State Patent Fund;
- * introduction of the VPTB automated library system based on the library automation system (SAB) “Irbis64”;
- * improvement of patent information support for employees of the Rospatent system, as well as a wide range of patent information users.

In 2019, the SPC was traditionally filled up with national patent documents on a subscription basis, as well as with foreign patent documents received within the frameworks of the international data exchange which was carried out with Patent offices of 57 countries and 6 international organizations. The share of the national patent documents stored in the SPC on all type of carriers accounts for 7.4%, foreign documents – 92.4%, national and foreign non-patent documents accounts for 0.2% (See Figure 10).

Figure 9
SPC structure distributed into information carriers as of December 31, 2019

%	Number of documents	Information carrier
67,0	95 222 125	Electronic carrier
25,0	35 439 248	Paper carrier
8,0	11 416 571	Micro carrier
100	142 077 944	TOTAL:

The international exchange of patent documentation was carried out mainly by uploading data from foreign Patent offices from FTP servers or other network resources of IP Offices. In total, 6.0 million documents were uploaded during the last year. Rospatent, fulfilling the obligations of international exchange, also provides its official publications to foreign Patent offices through a special FTP server.

The international exchange of patent documents with foreign Patent offices is presented by the data given in Table 5.6 of Annex 5 to the Report.

In the process of completing and maintaining the SPC, the FIPS Library department constantly monitors its completeness, records incoming and uploaded foreign documentation, as well as the quantitative state of the SPC in general.

The quantitative characteristics of the SPC patent documents update for the last five years are presented in Table 5.7 of Annex 5 to the Report.

In order to fulfil the tasks set in the Strategy for the Development of the Information Society in the Russian Federation for 2017–2030, access to the national patent documentation of the SPC is provided through the National Electronic Library (NEL). More than 2.5 million Soviet and Russian patent documents for inventions and utility models were uploaded into the National Electronic Library from 1924 to 2019, which accounted for 50% of the total array of documents in the National Electronic Library. You can enter the NEL through the FIPS website and get access to information from mobile applications from the NEL platform.

The SPC is traditionally divided into two main parts – the Central Patent Fund (CPF) and the Patent Examination Collection (PEC).

The Central Patent Fund

The Central Patent Fund (CPF) is designed to serve all categories of users with patent information and includes collections of national (since 1814) and foreign patent documents from various countries, various depths, abstract and bibliographic publications on all industrial property objects, patent-legal collections, normative-methodical and reference books, as well as IRA to these collections.

The CPF, as of December 31, 2019, has 124.8 million copies of patent documents; in 2019, more than 6.6 million copies of documents were received.

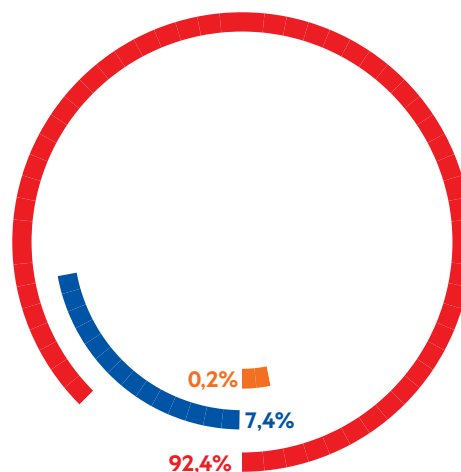

To conduct patent information research, all categories of VPTB users are provided with access to the PatSearch search system, as well as to other modern patent information resources – the Global Patent Index database; EAPATIS, Questel Orbit; eLIBRARY.

An integral part of the CPF is a collection of patent-law and vocabulary and reference books, which was an estimated 93 thousand copies of editions.

In addition, users are provided with access to e-book patent and legal publications of the Edward Elgar publishing house, the electronic library of dissertations of the Russian State Library, the National Electronic Library and the Web of Science information resources, KluwerIPLaw, ScienceDirect and Scopus of the publishing house Elsevier, eLIBRARY and the resources of the publishing house SPRINGER NATURE.

Figure 10
SPC structure distributed into types of documents

%	Number of documents	Type of documents
92,4	131 248 529	Foreign patent documents
7,4	10 526 276	National patent documents
0,2	303 139	Non-patent documents
100	142 077 944	TOTAL:

Patent Examination Fund

PEF is designated to serve state intellectual property experts.

The structure and composition of the PEF are governed by Rule 34 of the Regulations under the Patent Cooperation Treaty (PCT), where Rospatent is one of the participants, as well as by bilateral interagency treaties and agreements.

In order to conduct the patent examination in FIPS, the modern automated patent information system PatSearch is used, which is regularly updated with both national and foreign patent documents.

During this period, in order to conduct the state examination, as earlier, it was provided access to STN Intrantinal database, access to Derwent World Patent Index (DWPI) was renewed, access to world trademarks database SAEGIS of Clarivate Analytics, as well as to arrays of Lexis Nexis.

As of December 31, 2019, the PEF on paper copies contains 17.3 million national and foreign patent documents and is no longer being updated.

State examination process requires non-patent information to be provided in the PEF such as scientific and technical, patent and legal or reference and other books or regular publications, as well as upon the request, through the system of interlibrary loan and electronic delivery of documents from the largest specialized funds of Moscow libraries and remote databases.

An integral part of the SPC is a collection of applications and contracts for the results of intellectual activity and means of individualization. In 2019, the fund was updated with 188 thousand applications and contracts and totally amounted to 1.4 million units of storage. During this period, over 242 thousand documents of this fund were distributed among the FIPS departments. An examination of 38 thousand applications for inventions and industrial designs to determine the storage period (permanent and temporary). In the Russian State Archives (RSA) located in the city of Tugulym, Sverdlovsk oblast, 82 thousand applications for results of intellectual activity and means of individualization were transferred for permanent storage.

Information services provided on the basis of SPC

Patent information services for Rospatent specialists and its subordinate organizations,

as well as for other interested users of patent information are provided on the basis of the SPC, both directly at the service departments of the Library and in the remote access mode to various information products prepared by the Library on the FIPS website, processing of written requests and the provision of information, and advice telephonically.

Library users are provided with access to information retrieval systems, patent and non-patent databases, and patent documentation on paper and microcarrier. The Library provides access to the most complete collection of Russian privileges for inventions from 1814–1917, to a unique collection of patent and legal literature, which includes national and foreign books and periodicals on various issues of the legal protection of intellectual property in that country and abroad, and also to the Kluwer IP Law DB, electronic books and periodicals.

Library users have an option to receive in the bibliographic reference room, as well as directly in the service departments, references and advice on conducting various types of patent searches, classification systems, using databases and other sources of patent information available in the Library, as well as as posted on websites of Rospatent and FIPS, foreign Patent offices and organizations.

Practical classes on working with databases, training in electronic filing of applications, including test access to the services “Electronic filing of an application for an invention or utility model”, “Electronic filing of an application for a trademark” are regularly held as well as the work with “Application for registration of a computer program or database” and “Application for an industrial design” was organized in the Library computer hall.

The main indicators of the Library information services provided by the Library on the basis of the SPC for the past 5 years are given in Table 5.8 of Annex 5 to the Report.

In 2019 it was executed more than 1.7 thousand orders of patent information services, that were mainly related to the provision of copies from the SPC, for the Library users, as well as for remote regions, and foreign users.

On the basis of the SPC patent documentation, patent information products, and other materials are being prepared for posting on the FIPS website. Exhibitions in the Rospatent Museum and on the FIPS sites, mobile and virtual exhibitions, preparing brochures on

the history of the patent business, etc are being organized.

During 2019, the work was carried out on updating and supplementing the materials posted on the FIPS website in the “the Library Department” section, the updates were provided quarterly. Changes were made to the electronic version of the “Guide to the Funds of the The FIPS Library Department and Internet Resources”: the “Legislation” and “Search Systems” sections were updated with new information, as well as the annexes to the Guide. The Internet links were updated (as of December 31, 2019 it contains 10770 links). Changes and additions were made to the “Internet browser on patent information resources”, the Internet links were updated (as of December 31, 2019, it contains 5760 links). The structure was modified and 5 new sections were created, the design of the website was updated. There were translated and posted EPO publications “News on patent information” for 2019. Lists of recommended bibliography for regions that were divided into three topics were published monthly. Since 2019 the electronic catalogue of patent, scientific and legal documents update is conducted every three days (as of December 31, 2019, it contains 352,086 records).

Users’ requests to the information products of the Library Department are published on the FIPS website, indicating the data provided in Tables 5.9 and 5.10 of Annex to the Report.

On the basis of the SPC, electronic catalogue, and other sources of information in 2019, the Library prepares various information materials for the participants of events, organized by Rospatent, as well as for further publishing of this information on the FIPS website.

Within the framework of exhibitions organization for the Rospatent Museum, FIPS prepared: “Trademarks catalogue of the main theaters in the Russian Federation devoted to the Year of theater in Russia in 2019”; the bio-bibliographic index “Boris Rosing as a founder of “electric telescope” (dedicated to 150 anniversary). There was prepared

a brochure “Popular alphabet of intellectual property” for education projects among youth. There were prepared and printed the following booklets: “The Library information resources”, “Russian patent and technical library”, “Patent documents of the SPC in SEL”, a booklet for the exhibition “Intelligence serves for theater”.

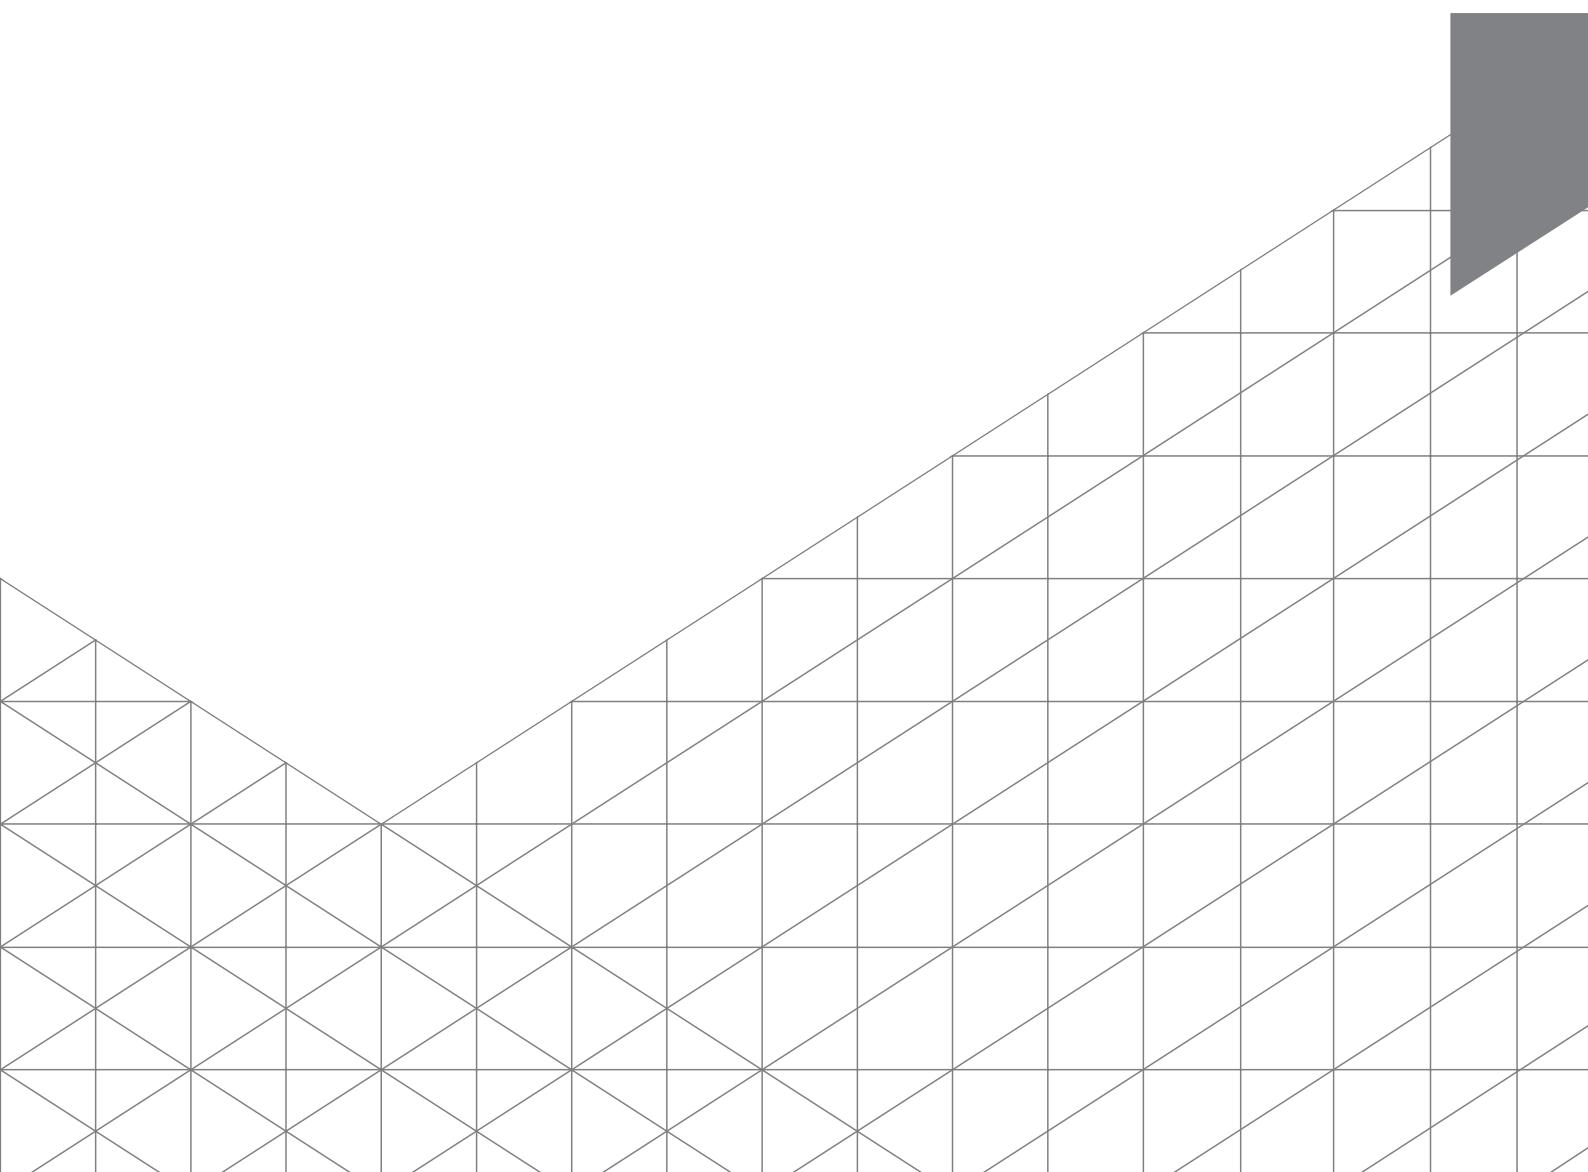

In accordance with the Prospectus of publications and databases of FIPS for 2019, the following brochures were prepared and printed out: “Legislation and regulations on inventions in the first years of the Soviet period (on the 100th anniversary of Decree “On Inventions (Regulation of June 30, 1919)”, the author is Candidate of Historical Sciences A. P. Kolesnikov; “Famous Patent Owners of Russia: biobibliographic index”, author – O.V. Zezina.

The Library Department renders services to the specialists of the Rospatent system (47 users), using the mode of Selective Information Dissemination (SDI) on the issues of intellectual property legal protection all over the world. Since 2019 it is available in automated mode with the help of specialized ARM services “Book issuance” SAB “IRBIS64”. During the year the information on new publications was distributed every week among Directors and main specialists of Rospatent FIPS and RSAIP (113 persons): lists of new publications on current issues of intellectual property protection (Russian and foreign journals from the Library collection), “Digest on Intellectual Property and Related Areas” (based on Russian mass media on the Internet), which was also posted on the FIPS website.

In order to raise public awareness on documents in the State patent collection there were prepared and published in the National electronic library 5 thematic abstracts of Russian patent documents: “Vladimir Shukhov (1853–1939). The famous Russian scientist and engineer”, “The driving force of changes: women in the field of innovation and creativity”; “Intelligence serves for theater”. “Young inventors the beginning”; “Leo Theremin is the inventor of Theremin.”

SCIENTIFIC, EDUCATIONAL AND AWARENESS-RAISING ACTIVITY

O. Neretin,

Director, Federal Institute of Industrial Property

O. Arakelova,

Acting Rector, Russian State Academy of Intellectual Property

INTRODUCTION

Based on its core functions, Rospatent and its subordinate institutes place particular importance on scientific, educational and project activity.

In Section 6, the main results of scientific and educational work of FIPS and RSAIP are listed. Scientific and educational activity is primarily directed at enhancing and development of consulting and methodological base, of modern views on the development of the IP field, all by submitting proposals on improving the IP legislation.

During the last years, Rospatent has devoted considerable attention to the awareness-raising activity, to the public promotion of the IP issues and the support for youth technical creativity.

Rospatent's focus of attention is also placed on the yearly participation in exhibition events organized in the Russian Federation and abroad.

6.1.

SCIENTIFIC ACTIVITY

6.1.1. Scientific and technological Council of FIPS

Scientific and technological Council of FIPS is a deliberative body that carries out a peer review of issues and formulates suggestions on scientific, technical, legal and information activity of FIPS.

In 2019, 36 members took part of the Council, including 10 Doctors of Sciences and 9 PhDs. In addition to FIPS employees, representatives of Rospatent's subordinate bodies are members of the Council – Federal State Budgetary Institution “Federal Agency for Legal Protection of the Results of Intellectual Activity of Military, Special and Dual Designation” (FAPRID) and RSAIP – and also representatives of the Committee on Science, Education, and Culture of the Federation Council of the Federal Assembly of the Russian Federation; the Lomonosov Moscow State University; the Institute of Informatics Problems of the Federal Research Center “Computer Science And Control” of the Russian Academy Of Sciences; the Russian Research Institute of Economics, Politics, and Law in Science and Technology; Institute of Applied Mathematics and Mechanics of the Peter the Great St. Petersburg Polytechnic University; All-Russian Society of Inventors and Innovators (VOIR).

In 2019, Council had 6 meetings with 30 reports and statements, and based on their discussion appropriate decisions were made.

Among the most important issues reviewed at the Council meetings there were the following:

1. The methodology of evaluation of IP assets commercialization prospects.
2. The prompt analytical data preparation: current state, prospects.
3. Key project results of the study on patent documents portfolio of the “Russian Railways”.
4. Procedures for a study on patent documents portfolio of a large company.
5. Results of research projects (15 in total).

In 2020, Council faces the task of developing professional scientific communication on current IP issues, as well as of publishing main results of research activity in academic journals.

6.1.2. Scientific activity of FIPS

According to the tasks undertaken by FIPS, the current research projects are aimed at issues and challenges of maintenance, development and improvement of examination, legal protection, use and enforcement of results of intellectual activity and means of individualization.

In 2019, FIPS research projects were conducted under the FIPS Thematic Plan of Research Projects signed by the Head of Rospatent in the following areas:

- * issues of legal protection and examination of objects for IP rights protection;
- * information technologies in the IP field;
- * economic and organizational issues;
- * development of educational activity.

As a part of the research projects completed in 2019:

- * the proposals were developed on introducing changes in the departmental methodology documents, as well as regulatory legal acts on the legal protection of industrial designs, inventions, and utility models;
- * version of database on legal service names was created, systematized on the principle of the “relative” uniformity;
- * study was conducted on issues of integrating solutions on the use of products and services knowledge database with an examination system of the stated trademark designation:
 - algorithms were developed for further creation of specialized programs. Their use should ensure the automatization of designation examination procedures with automatic preparation of draft examination decisions, including automatic comparison of claimed nominations of goods or services with legal terms of goods and services from International Classification of Goods and Services for conformity check when analyzing confusingly similar signs for homogeneous goods and services;
- * Approaches were identified to organizing paperwork on international registration of industrial designs based on the analysis of foreign IP Offices practices in countries members of the Hague Agreement:
 - proposals were developed on introducing changes into the paperwork technology on industrial designs international applications, including the issues of interaction between FIPS departments when Rospatent receives applicant's opposition on a negative decision for granting protection, and also when the owner is amended (in particular under assignment contract);

- taking into account foreign experience, proposals were developed on Rospatent's publication of information on international registrations of industrial designs with an indication of the Russian Federation as a receiving Office, and notifications of their legal status amendments;
- information on Rospatent's website was actualized on the page "Geneva Act of the Hague Agreement Concerning the International Registration of Industrial Designs", including methodological materials and recommendations by FIPS specialists;
- * analytical model for evaluation of the Russian IP system development in the industrial property field was developed, including:
 - indicators system and methodology of their calculation;
 - proposal on including the developed indicators into innovation development programs for regional administrations and economic operators;
 - draft technical requirement for creating software for implementing an analytical model in Rospatent's practical activity;
- * issues of qualified staffing in the IP field were studied, ways of their resolving were suggested:
 - the model of system for professional training in the IP field, was developed including a list of specialists' competences, taking into account the specifics of the work;
 - draft programs of further education in the IP field, were developed complying with the requirements for specialists training, who are involved in the implementation of the Strategy for Scientific and Technological Development of the Russian Federation (at least 5), and the appropriate teaching materials;
 - methodology of calculating the staffing demand in the IP field in the economic sectors was developed;
 - draft legal documents for specialist training in the IP field were developed.

Information on the research works conducted under the FIPS Thematic Plan of Research Projects can be found on the FIPS webpage in Scientific Activity Section.

In 2019, a number of research and statistical projects was realized, and in their framework the following documents were developed:

- * Methodological recommendations on evaluation procedure of intangible assets market value (on a company's request);
- * Questionnaires on document quality evaluation of the strategic development of the IP field in a given region (Republic of Tatarstan,

Republic of Karachay-Cherkessia, Tambov Region, Vologda Region, Voronezh Region, Omsk Region, Ulyanovsk Region) for the Ministry of Economic Development of the Russian Federation and Russian regions.

Rospatent, in cooperation with FIPS conducted:

- * Draft strategic documents analysis in regions (Republic of Tatarstan, Republic of Karachay-Cherkessia, Tambov Region, Vologda Region, Voronezh Region, Omsk Region, Ulyanovsk Region); FIPS prepared reviews on draft amendments to documents on the strategic development of the region;
- * monitoring of the results of intellectual activity use, created in the research and development process financed from the federal budget, on the basis of the 4-NT form (a list), final database on the identified objects;
- * analytical review of foreign IP field development strategies;
- * review of previously developed versions of IP strategies;
- * analysis of complex information on the activity of authorities responsible for the regulation of the relations in the IP field in Japan and Australia;
- * analytical review in the IP field in countries members of the Eurasian Economic Union;
- * analysis of the patent activity from the perspective of various economic activity fields;
- * trends analysis of the main FIPS performance indicators;
- * analysis of patenting in the priority and promising fields of scientific and technological development of the Russian Federation.

During 2019, FIPS prepared the following materials:

- * for the Federal executive bodies:
 - analytical materials characterizing trends of patent applications on inventions and applications on trademark certificates for the Ministry of Economic Development of the Russian Federation;
 - proposals on for the draft evaluation methodology of the influence the implementation of scientific and technological projects and programs within the Strategy for Scientific and Technological Development of the Russian Federation has on macroeconomic and sectoral growth in high-technology sectors of the Russian industry;
 - proposals on enhancing the methodology of determining the statistical set of the examined organizations combination that carry out technological innovations and methodologies of organizing federal statistical monitoring;

- proposals for the Federal executive bodies of the Russian Federal subjects to implement in the period 2019–2021 the Strategy of State National Policy of the Russian Federation until 2025;
- suggestions to the draft report to the Government of the Russian Federation on activities aimed at stimulating innovative development of the Russian Federation;
- suggestions and comments on the draft state program “Scientific and technological development of the Russian Federation”;
- reviews on the professional standard “Specialist in managing the intellectual property and technology transfer”; draft standards “IP. Management in the credit organization”, “IP. Management in the stock market”, “IP. Accounting and intangible assets”; on the draft federal accounting standard “Intangible assets”;
- statistical data in the perspective of the Federal subjects of the Russian Federation upon the request made by the Ministry of Economic Development of the Russian Federation;
- statistical data on applications and issued protection certificates on all objects for intellectual property rights protection to foreign applicants upon the request made by the Russian Federal State Statistics Service;
- statistical data for forecast indicators calculation of the intellectual property development field in the framework of the trilateral agreement on the interaction between regions and the Ministry of Economic Development of the Russian Federation and Rospatent on the support of intellectual property development field in the Russian Federal subject;
- information on state measures for business support in the Russian Federation, provided within the framework of Office’s activity;
- analytical notes on patent activity of Russian applicants and average terms of application examination on inventions, utility models, industrial designs and computer programs;
- statistical and analytical materials on mass-media requests;
- * for Rospatent and FIPS administration:
 - 60 reports on innovation activity of regions of the Russian Federation, 39 reports on innovation activity of foreign countries, more than 40 information and analysis reports for presentations for Heads of Rospatent and FIPS;

- materials for 80 presentations of Rospatent and FIPS administration for forums, congresses, conferences, seminars, and also for collegial meetings of Rospatent and Scientific and technological Council of FIPS.

The results of the scientific and research activity are also a foundation for the development of FIPS educational programs.

6.1.3. Scientific activity of RSAIP

Scientific activity of the Academy in 2019 was conducted in form of scientific research, carried out by professors, academic staff and students; scientific research by graduate and undergraduate students; collaborative scientific research by professors, academic staff and students; scientific events (conferences, forums, seminars).

In 2019, the Academy worked on conducting research projects under contracts with external organizations. During this period, two research projects were carried out:

1. Patent research for LLC “Institute of Transneft”;
2. Analysis of the legal framework (from 1930 until the present day), contracts and other documents, and preparation of the preliminary conclusion on the value of results of intellectual property activity for Giprogor Company.

In addition to the research works conducted for outside organizations, the Academy carried out departmental and interdepartmental research projects with their results being used in the educational process. The main directions of research are:

- * application of measures against counterfeiting: current issues;
- * legal literacy in the copyright field as a key for the development (protection) of the Russian language;
- * notary in the legal protection mechanism (theoretical and legal aspects);
- * managing the modern innovative business;
- * innovative management mechanisms in creative industries;
- * venture accelerator;
- * brand-management;
- * managing projects in the blockchain technology field;
- * modern issues of the innovation management theory and practice;
- * managing human resources in innovative organizations.

In 2019, RSAIP prepared 26 expert reports. Prepared reports assessed the topic of copyright issues, patent law and individualization means. Conducting applied researches provides professors with good practical material to use during lectures and seminars.

During this period meetings of the Academy's scientific schools were held: Copyright School, Industrial Property School, Intellectual Property Management School.

In 2019, the Academy in collaboration with the Russian Authors' Society continued publishing academic and practical journal "Copyright". During this period four issues were published with 66 articles in total. Journal's materials are published under a licensing agreement in the "Garant" database.

6.2.

EDUCATIONAL ACTIVITY

6.2.1. Specialists training in RSAIP

In the Academy, education is carried out at the following level of training:

- * training for a university degree;
- * training for teaching and academic staff;
- * further professional education.

Training of specialists with a higher education degree

As of the end of year 2019, 406 students were enrolled at the Faculty of Law, with 212 full-time students (73 students on a state scholarship and 139 on a fee basis), 42 part-time students (undergraduate, on a fee basis) and 152 extramural students (25 undergraduate on a fee basis and 127 graduate on a fee basis).

At the Intellectual Property Management Faculty there are 242 students, with 186 full-time students (109 students on a state scholarship and 77 on a fee basis), 56 extramural students (undergraduate and graduate on a fee basis).

The increase in the number of students amounted to 3.3% in comparison to 2018.

The number of students on implemented educational programs at the expense of the state budget, of the budget of the Federal subjects of the Russian Federation, local budgets and on contracts on paid educational

services in 2019 is provided in Table 6.4 of Annex to the Report.

Graduated in 2019:

Faculty of the law: 74 graduates (50 – full-time, 24 – extramural education);

Intellectual Property Management Faculty: 44 graduates (41 – full-time, 3 – extramural).

Training of teaching and academic staff

In 2019 for the advanced training programs for teaching and scientific personnel, 12 students were accepted, including:

- * for the program 40.06.01 "Jurisprudence" – 7 students (full-time), 3 students (extramural education),
- * for the program 38.06.01 "Economics" – 2 students (full-time);

following the procedure of assignment for preparation of dissertations for the Degree of Candidate of Science to the program 12.00.03 7 students were accepted.

As of the end of 2019, there were 62 students at the Graduate School of RSAIP, including 18 students on a scholarship, 44 students on a fee basis and 14 students assigned for dissertation without learning under the training for teaching and academic staff program.

Academic supervision of graduate students and doctoral researchers was conducted by 23 academics, among them –12 PhDs and 11 Doctors of Sciences.

In the Doctorate of RSAIP, in 2018 there were 2 students. Two contracts for preparation for the defence of the doctoral dissertation were concluded.

In the Dissertation Council of RGAIS, in 2019, 7 PhD dissertations and 2 Doctor of Science dissertations were defended successfully. All dissertations were dedicated to the current issues of intellectual property.

Further professional education in RSAIP

In 2019, RSAIP implemented 31 advanced training and professional retraining programs on the basis of the Institute of further education and professional retraining of RSAIP. The total number of students trained on additional professional programs amounted to 435 students, including 356 students on advanced training programs (16 to 250 academic hours) and 79 students on professional retraining

programs (250 academic hours and more). 80 specialists continue their education under professional retraining programs, 7 specialists on advanced training with distance learning technologies, 359 students on advanced learning programs.

In order to improve the level of staff training in the intellectual property field there were developed and implemented three advanced training programs:

- * “Regional brands as an effective tool of economic development of regions”;
- * intensive course for senior positions “Turnover of rights on intangible assets as a powerful tool for business economics development”;
- * “Intellectual property in the digital economy”.

In September 2019, 8 specialists – representatives of the countries of the Caucasus, Central Asia, and Eastern Europe – graduated under the agreement between RSAIP and World Intellectual Property Organization (WIPO) as a part of the Master of Business Administration (MBA) professional retraining program with a major in Project Management in the Intellectual Property Field.

As a part of realizing its functions as a Basic organization for countries members of the Commonwealth of Independent States for training, professional retraining, and advanced training in the intellectual property field, in RSAIP in 2019: 16 specialists graduated from their professional retraining programs, 13 specialists will continue their training.

Countries	Graduated in 2019	Continue education
Republic of Kazakhstan	2	2
Turkmenistan	1	2
Republic of Belarus	2	-
Republic of Armenia	2	2
Republic of Tajikistan	3	2
Kyrgyz Republic	3	-
Republic of Azerbaijan	2	2
Republic of Uzbekistan	1	3
TOTAL:	16	13

In 2019 on the basis of the JSC Dzerzhinsky Research and Production Corporation “Uralvagonzavod” 20 specialists received training under the program “Mechanisms of efficient use of rights on results of intellectual activity”.

In addition, training under the program “Regional brands as an effective tool of economic development of regions” was received by the specialists of the Ministry of the Industry and Economic Development of the Ryazan Region, the Ministry of the Industry and Trade of Buryatia Republic, the Ministry of Economic, Territorial Development and Trade of the Chechen Republic, the Ministry of Entrepreneurship, Trade and Tourism of the Sakha Republic (Yakutiya), the Ministry of the Investments and Development of the Sverdlovsk Region.

In 2019, specialists were trained under advanced programs for qualification exam preparations for patent attorney certification in the Russian Federation. In total, the training was provided for 113 students.

Name of the program	Number of students graduated
Candidates training for patent attorneys. Trademarks, service marks, appellations of origin.	45
Candidates training for patent attorneys. Inventions and utility models.	47
Candidates training for patent attorneys. Programs for electronic computers, databases, layout designs (topographies) of integrated circuits	13
Candidates training for patent attorneys. Industrial designs.	8

In December 2019, the Academy in collaboration with the University of National Technological Initiative 20.35, signed a contract for the provision of educational services for 1600 students under advanced training programs of further professional education: “Management of projects in the intellectual property field”.

In November 2019, RSAIP successfully received state accreditation for the educational activity for the main educational programs at each level of professional qualification degree and at each major taught in the Academy. RGAIS received State Accreditation Certificate No 3311 dated January 13, 2020.

6.2.2. Further professional training for FIPS specialists

One of the key objectives of the Federal Institute of Industrial Property development is a continuous improvement of the professional skills of FIPS employees as a part of a Unified education system based on the continuity principle, starting from the first day of employment.

The main tool for this task in 2019 was a system of studies for various categories of FIPS employees following the introduction of new normative legal acts regulating rules and procedures for the provision of public services.

This task was carried out by training employees under technology training sessions directly in the departments of FIPS and in group lessons.

In accordance with the Consolidated Plan on Internal Training of Employees in 2019, signed by the Head of FIPS, 7 group sessions were organized with 420 FIPS specialists attending. Moreover, 252 sessions were organized directly in FIPS departments. In 2019, the main focus during the study organizational process was placed on studying new normative legal acts in the field of providing public services, as well as on the amendments to the Provision on patent and other fees.

FIPS, by implementing a balanced human resource policy, draws particular attention to the training of employee pool of state intellectual property experts.

The key element of this training is “Expert-intern” program, during which young specialists receive extensive theoretical and practical experience by working in expert units under the guidance of experienced mentors, and go through training under specially developed advanced programs:

“Training of expert interns under the program
“Training of experts conducting application examination for inventions and utility models” (232 academic hours);

“Training of expert interns under the program
“Training of experts conducting application examination for trademarks” (126 academic hours).

The first intake of the “Expert-intern” education program graduated in 2017, and in total, the number of students who received the training under the above-mentioned programs amounted to 25 students in 2017, 122 students in 2018, 88 students in 2019.

The vast majority of expert-interns are assigned on a full-time basis to expert departments of FIPS upon receiving the training, and as a result, the training and advanced training programs for expert staff of FIPS show their effectiveness.

6.2.3. Organization of supplementary vocational training at FIPS for specialists of organizations

To satisfy the national economy’s need in specialists with a high level of professional competence in the field of intellectual property, Administration of Rospatent and FIPS made a decision to enhance the educational activities of the Federal Institute of the Industrial Property, taking into account the high professional competence of the expert staff of FIPS.

Activity on realizing the supplementary vocational programs is based under license series 77Л 01 No. 0008944 (reg. No. 038110), issued December 19, 2016 by the Moscow Department of Education; educational activity is carried out since 2017.

In this period, during the sessions of the Scientific and Technological Council of FIPS, there were developed and approved 25 advanced training programs and 3 professional retraining programs, all aimed at improving the level of the professional competence of employees in the intellectual property field. Leading FIPS state IP experts, as well as external specialists and practitioners, are invited to teach.

In order to coordinate the educational activity of FIPS, a Scientific Educational Center was created.

In 2019, the Center trained 1092 specialists, with 1069 of them under advanced training programs (55 specialists through distance learning); 23 specialists under professional retraining program “Legal protection of the results of intellectual activity and their rights management”.

Therefore, the number of graduates from the FIPS Center programs in 2019 increased in two and a half times compared to 2018 and more than in twelve times compared to 2017.

Cooperation with the corporate customers for educational services is actively developed: Russian Railways, Gazprom, Gazprom Neft, Siberian Coal Energy Company, Sibur, Uralvagonzavod, Roscosmos, Rosatom, etc. The training was conducted in Novy Uren-goy, Tomsk, Satin-Petersburg, Nizhny Tagil and other cities.

Graduates of the FIPS Scientific and technological Council always emphasize the relevance of realized programs, their practical orientation, high qualification of teachers.

One of the important directions for further development of the FIPS educational process is the development of distance learning programs. In December 2018, educational process under the distance learning program "Introduction to the technology transfer" was launched. In 2019, education continued under distance learning programs "Building regional brands", "Recommendations on managing the rights in the results of intellectual activity and means of individualization in the regions of the Russian Federation" (for regional administrations), "Commercial and regulatory specifics of pharmaceuticals turnover in the framework of intellectual property rights protection". In 2020, it is planned to expand the range of such programs.

FIPS is a base for conducting practical education for RSAIP students and other leading Russian universities.

Information on educational events organized by FIPS in 2019 is presented in Table 6.5 of Annex to the Report.

6.3.

RAISING THE AWARENESS: FORUMS, CONFERENCES, SEMINARS, ROUND TABLES, ETC.

For the purpose of promoting the intellectual property field, the activity of Rospatent and its subordinate organizations, representatives of Rospatent and FIPS participate in the socially significant events on the international, federal and regional levels.

During 2019, Rospatent took part in organizing and conducting 30 events dedicated to the current issues of theoretical and practical aspects of legal protection and use of the results of intellectual activity:

- * X Gaidar Forum, Russia and the World: National Development Goals and Global Trends;
- * Russian Investment Forum – 2019;
- * Moscow Digital Forum;
- * CIS International Economic Forum "CIS: digital economy – integration platform";
- * XX Intellectual Property Forum;
- * Krasnoyarsk Economic Forum – 2019;
- * V International Arctic Forum "Arctic: Region of Dialogue";
- * International Strategic Forum for Intellectual Property – IPQuorum 2019;

- * XXII Moscow International Inventions and Innovative Technology Salon "Archimedes-2019";
- * Conference "Intellectual Property – 2019";
- * XII International Forum "Intellectual property – XXI century";
- * IX St. Petersburg International Legal Forum;
- * VII Congress of Technology and Innovation Support Centers (TISCs);
- * St. Petersburg International Economic Forum – 2019;
- * VI China-Russia EXPO;
- * Business Festival of Innovations and Digital Technologies CEBIT RUSSIA;
- * International Military-Technical Forum "ARMY-2019";
- * INNOPROM – 2019;
- * VII International Forum Of Technological Development "TECHNOPROM-2019";
- * II Khakassia Regional Business Forum "Not-Small Business";
- * VI BRICS International Competition Conference "10 years of successful cooperation: results and prospects";
- * Eastern Economic Forum – 2019;
- * WIPO National Seminar on the Patent Cooperation Treaty (PCT) System;
- * XV International Inventions and Innovative Technology Salon "New Time";
- * V Small and medium-sized Business Forum of the SCO and BRICS Regions;
- * Russian National Evening as part of the 59th series of meetings of the WIPO Assembly;
- * VII Moscow International Forum "Open Innovations";
- * Russia – Africa Summit and Economic Forum;
- * International Customs Forum – 2019;
- * International Scientific and Practical Conference "Intellectual Rights: Challenges of the XXI Century";
- * International Forum "Orenburg – the heart of Eurasia".

Presentations of Rospatent activities in the format of the exhibition stand were successfully held at eight forums:

- * Krasnoyarsk Economic Forum – 2019;
- * INNOPROM – 2019 (collaborative participation at the partner's stand – Gazprombank);
- * VII International Forum Of Technological Development "TECHNOPROM-2019";
- * XXII Moscow International Inventions and Innovative Technology Salon "Archimedes-2019";
- * St. Petersburg International Economic Forum – 2019 (collaborative participation at the partner's stand – Gazprombank);
- * VI China-Russia EXPO;
- * International Customs Forum – 2019;

- * Russian National Evening as part of the 59th series of meetings of the WIPO Assembly;

During the forums, the stands of Rospatent provided:

- * Presentation materials and handouts to the participants of the events;
- * Consulting services both at Office's exhibition space and at other forums/exhibition venues.

In addition, in the framework of the St. Petersburg International Economic Forum, there were held grand ceremonies of signing of agreements between Rospatent and:

- * the Ministry of Economic Development of the Russian Federation;
- * the Government of the Republic of Tatarstan;
- * Administration of the Tambov Region;
- * the Government of the Leningrad Region;
- * Federal Customs Service of the Russian Federation;
- * the Federal Agency for State Property Management (Rosimushchestvo);
- * Russian Union of Public Associations "Youth Social and Economic Initiatives".

In the framework of the XXII Moscow International Inventions and Innovative Technology Salon "Archimedes-2019", the Rospatent International Scientific and Practical Conference "Inventive, innovative, patenting and licensing activity in the digital economy context" took place.

Within the Conference, a wide range of issues, related to the intellectual property field, was discussed. It included specifics of patenting solutions in the information technology field; issues of technological and business consulting on the basis of the patent information, issues of digital applications on the objects for the intellectual property rights protection.

Representatives of FIPS and RSAIP shared with the conference participants their expert opinion on such an important topic as exporting intellectual property, access to the FIPS databases at the Technology and Innovation Support Centers. Moreover, issues of the inventive and innovative activity were studied on the real-life cases.

The event was attended by more than 250 people.

Rospatent devotes great attention to engaging in a dialogue with scientific and business communities to discuss issues of the legal protection of the results of intellectual activ-

ity and management of intellectual property through organizing and taking part in central and regional conferences, seminars and exhibitions dedicated to the current challenges in the intellectual property field.

For this purpose, in 2019 a series of meetings and discussions were held:

- * Rospatent Round Table "Legal protection and promotion of regional brands as an important resource for economic development" within the framework of the XII Russian Chamber of Commerce and Industry Forum;
- * Joint session of All-Russian Non-Governmental Organization of Small and Medium Business "Opora Russia" and Rospatent on discussion of issues of legal protection of intellectual property by small and medium enterprises;
- * In cooperation with representatives of "Archimedes" Salon an All-Russian Meeting was held on the topic "Inventive, patenting and licensing activity as the main diversification factor of production in the Military-industrial complex".

Rospatent established its nomination "Intellectual property is the future of my country" as a part of XVI "My country – my Russia" – the all-Russian Youth Competition of author's projects and education projects aimed at social and economic development of Russian regions. The main goal is to build and develop inventive competencies, skills of project management in the intellectual property field among the young people; to involve the younger generation in scientific, project and innovative activity; to communicate the information on promising developments to the professional community; to increase the communication levels between project developers and investment companies, technology transfer centers.

RSAIP employees participated in more than 60 scientific events, including making presentations.

Traditionally, the Academy organized and actively participated in the events dedicated to the celebration of the International Day of Intellectual Property, carried out within the framework of the XII International Forum "Intellectual property – XXI century". In RSAIP several events took place: the III All-Russian Conference for Young Scientists dedicated to current issues of intellectual property rights; International Conference for Young Scientists "Intellectual Property – looking to the future", as well as seminars and round tables, all attended by undergraduate and graduate

students of RSAIP, interested participants from other universities.

In 2019, RSAIP continued to implement awareness-raising, the scientific and educational project “Intellectual Landing Operation” (the project was launched in 2013), aimed at promoting knowledge in the intellectual property field among school and university students; at covering legal and economic aspects of the intellectual property, at identifying young scientists and specialists in the intellectual property field. In 2019, this event was hosted in Ufa by Bashkir State Pedagogical University named after M. Akmulla.

During this period, RSAIP continued the tradition of holding “University Saturdays” – a project aimed at promoting information about the Academy, its educational process and knowledge on the intellectual property field among the students of Moscow high schools. Events were held in five Moscow schools.

In November RSAIP for the first time held an Intellectual Quiz “Legal Experts” for the students from the first to the third year of studies, in celebration of the Lawyer’s Day.

Scientific and awareness-raising activity of FIPS was conducted in accordance with the tasks stated in the set of legal and normative documents determining the development strategy of the information society¹.

One of the types of scientific and awareness-raising activity is a thematic meeting. During 2019, there were 29 thematic meetings conducted with administration and leading specialists of Rospatent and FIPS for the applicants, right holders, patent attorneys, specialists in the intellectual property field, representatives of the business community and other interested parties. Six of them were dedicated to topic “Electronic filing of applications for trademarks, inventions, appellations of origin using the “ARM Registrator” (Automated Working Space Registrator); and two meetings were on topic “Electronic

filing of applications for industrial designs, computer programs, and databases”, “Your Account” service; four meetings were dedicated to program “Patent analytics lounges”, organized by the Project Office of FIPS.

Other thematic meetings focused on the following:

- * “State registration of computer programs and databases”;
- * “Using the patent analytics when patenting inventions, utility models and industrial designs”;
- * “Specific aspects of using search systems on the FIPS website for conducting a search for information on various objects for intellectual property rights registration”;
- * “Submitting and examining an application for industrial designs in accordance with the Hague System for the International Registration of Industrial Designs”;
- * “Examination of applications in the IT technology field”;
- * “Using technological analytics for participating in state development programs”;
- * “Methodology of preparing analytical reports on inventive activity, intellectual property and technological development for regional and sectoral administrations”;
- * “Current issues of patenting industrial designs practice”;
- * “Appellations of origin and regional brands”;
- * “The main mistakes made when filing applications for appellations of origin”;
- * Meeting with representatives of patent law companies on “Increase in the patenting activity of applicants in the industrial designs sector”;
- * “Current issues of examining applications for trademarks”;
- * “Current issues of recognizing trademarks as well-known”;
- * “Listing the sequences of nucleotides and amino acids when characterizing inventions in the biotechnological field”. WIPO Software “WIPO Sequence” for the preparation of lists of sequences for the application materials in accordance with WIPO Standard ST.26”;
- * “Discussing the issue of introducing amendments in the provision of paragraph 2 of Requirements for application materials for issuing a patent for industrial design, referring to the requirement of unity of industrial design”;
- * “Managing rights on the results of the intellectual activity in an organization”;
- * “Practice of application consideration relating to the state registration of exclusive rights deposition and applications for introducing the amendments to the State Registry and to the Certificate. Common mistakes”.

¹ “On Education in the Russian Federation” dated 29 December 2012 r. №273-FZ; “Strategy for the scientific and technological development of the Russian Federation” (Presidential Decree dated 01.12.2016 № 642); “On Strategy for information society development in the Russian Federation for the period of 2017–2030” (Presidential Decree dated 9 May 2017 № 203); “Digital Economy of the Russian Federation” (Government Directive dated 28.07.2017 №1632-p); Plan of measures (“road-map”) “Kruzhok movement” of the National Technological Initiative (Annex to the protocol of the Presidium of the Presidential Council for Economic Modernisation and Innovation of the Russian Federation dated 18 July 2017 № 3).

In total, 2428 people participated in the above-mentioned events, including 1718 people from Moscow, 102 people from Moscow Region, 81 people from 25 Russian cities, as well as 527 people in video-conference format, organized by 11 entities that have Technology and Innovation Support Centers status.

FIPS All-Russian Patent And Technical Library (VPTB) conducts active awareness-raising work among young people. This activity contributes to the development of inventive thinking, forms functional literacy in the field of intellectual property rights protection, patent culture, and parenting among young people. The work is carried out in several directions.

1. Interaction with network organizations working with gifted children in the field of technical creativity: Federal Network of children's technoparks "Quantorium", Educational Center "Sirius", Program "Step towards the future", "School patent", etc. In 2019 3 face-to-face seminars for children, 8 webinars on the intellectual property for children and technopark mentors were conducted, dedicated to the following topics: "Information resources", "Patent search", "Information Resources DesignView and TMView", "Legal protection and project safety", "Algorithm of submitting an application for an invention", "Think as an inventor" (competition winners announcements and awarding FIPS certificates), "Innovation ideas trends of children inventors", "Part 4 of the Civil Code of the Russian Federation", "Search, examination, registration of inventions", presentations of the exhibition projects "Discovery of the new era for natural sciences" and "Arctic: driver for economic growth", "What should inventor know?", "Patent analytics as an inventor's tool". There were more than 340 connections to the webinars from technoparks. During the IV Convention for young inventors in Kazan, FIPS organized seminar on intellectual property, etc. In total, there were 1349 participants in these events.

2. Awareness-raising projects in the intellectual property knowledge popularization among the young people, college and university students with FIPS state experts and other specialists in the intellectual property field. There are two big projects being implemented by FIPS All-Russian Patent And Technical Library: "Inventors NEXT" and "Scientific Yough on Intellectual Property". Students of Moscow colleges of Moscow Education Department (with cooperation with City methodological

center of Moscow Education Department) participated in the meetings on technological security, service and light industry, industrial equipment and communication systems, as well as students of Moscow universities: Gubkin Russian State University of Oil and Gas, Russian State Social University, MIREA – Russian Technological University, RSAIP, Institute Of Business Studies of the Russian Presidential Academy of National Economy and Public Administration under the President of the Russian Federation, Lomonosov Moscow State University, Moscow Aviation Institute (National Research University and College of Law). There were 18 meetings held in 2019 with 664 participants in total.

3. Interaction with the community of libraries. There were organized four webinars at the Russian State Library for Young Adults with seven presentations held: "Exhibition projects on the basis of funds as an element of educational activities of a library", "FIPS All-Russian Patent And Technical Library Exhibition project "The driving force of change: Women in innovation and creativity"; "Young inventors – the driver of progress", "Popular alphabet of intellectual property", "Inventions for libraries from a legal point of view", "Patent information", "Information products of FIPS All-Russian Patent And Technical Library". Webinar materials were published for public access in the Internet and were viewed 4553 times in 2019. FIPS All-Russian Patent And Technical Library specialists also took an active part in conferences, seminars, and forums held by Russian libraries.

4. New project "Intellectual Property at 56 Height" was initiated, and within its framework, a set of lectures and workshops was held: "It is time to learn about intellectual property", "Three pillars of intellectual property"; "Trends of innovative ideas of children inventors", "What is a patent and why is it important?"; "Trademark as a way of promoting youth entrepreneurship", "Success case of a young inventor"; "How to navigate the world of patent and non-patent information (databases)" and a workshop on "Patent search on a given topic" + the case: application submission algorithm.

5. Various awareness-raising events held at FIPS. In 2019 there were 414 participants at the following events:

- * Meeting with professors and students of the Stroganov Moscow State Academy of Arts and Industry, Moscow State Art and Cultural University; round table and excursion as a part of an internship for first-year

RSAIP students and retraining programs students.;

- * Meeting with representatives of Non-Profit Partnership “Wikimedia RU”;
- * Meeting with representatives of the National Electronic Library and a workshop on “Search capacities of the National Electronic Library”;
- * Rospatent Museum excursion and workshop on a patent search for representatives of the state corporations “Roscosmos” and “Rosatom”;
- * Russian Language Day in Rospatent: “Russian is the language of innovations”.

6. Awareness-raising seminars on intellectual property for the young audience and scientific and research community within the framework of Russian and international forums, conferences, project and technological schools with the participation of FIPS All-Russian Patent And Technical Library specialists and FIPS experts. In 2019, public lectures, seminars and master classes were held at various venues, including:

- * XXII Moscow International Inventions and Innovative Technology Salon “Archimedes-2019”, Conference “Inventive, innovative, patenting and licensing activity in the digital economy context”, Moscow;
- * 5th International Professional Forum “Book. Culture. Education. Innovation” (Crimea-2019), Sudak. Within the forum framework a special event “Rospatent Day” took place, dedicated to the topic “Digital transformation of the intellectual property field”;
- * XXIII International Conference and Exhibition “LIBCOM-2019”. “Information technologies, computer systems and publishing products for libraries”, Suzdal;
- * International Military-Technical Forum “ARMY-2019”, Kubinka;
- * X Public Awards Ceremony “For the contribution to the intellectual property”. Panel discussion for young inventors “School Patent” in the framework of the XII St. Petersburg International Innovation Forum, St. Petersburg;
- * II Annual Summit of Young Scientists and Engineers “Big challenges for the Society, the State and the Science”, Sochi;
- * Scientific and practical conference and the 3rd Interregional IRBIS School. “National Electronic Library Search Capacities” Seminar, St. Petersburg;
- * XI Forum “Days of Intellectual Property in the Northwestern Federal District”, St. Petersburg;
- * 73rd International Youth Scientific Conference “Oil and Gas – 2019” (Gubkin Russian State University of Oil and Gas);

- * International Research and Practical Conference “Rumyantsev Readings – 2019” (Russian Library Association);
- * International Forum Fest “Intellectual Property For Future”, St. Petersburg;
- * International Conference “Science, Technology And Information In Libraries” (LIBWAY-2019), Irkutsk (Skype Connection);
- * IV Biblio-Forum (XI International Research and Practical Conference “Information Technology in Medical Libraries”), Aktobe, Republic of Kazakhstan;
- * Round Table “Museum as a space for education”, held by Gubkin Russian State University of Oil and Gas and Russian Academy of Education as a part of the International Year of the Periodic Table of the Chemical Elements events;
- * Intellectual Property Conference “Trademark Registration as a way of protecting intellectual property of a company or for an individual entrepreneur”, organized jointly by Serkons company and FIPS;
- * International Conference “Digital Transformation: Focus on IP”;
- * All-Russian Science Fest “Nauka 0+” in Moscow and Russian Regions.

In 2019, FIPS All-Russian Patent And Technical Library organized, held and took part in total in more than 100 awareness-raising events with the total number of participants amounting to more than 12.6 thousand people, including distance participants from eight Federal Districts.

In 2019, the following exhibition projects were implemented by the FIPS All-Russian Patent And Technical Library on the basis of resources of the State Patent Collection and with material contributions and exhibits provided by co-organizers of exhibitions (Russian museums, archives, etc.):

- * temporary exhibitions in the Rospatent Museum and FIPS buildings: “Intelligence at the service of the theatre”, photo-exhibitions “Theatrical Moscow” and “The Bolshoi Theatre”, dedicated to the Theatre Year in the Russian Federation; “Arctic: driver for economic growth. Breakthrough into the future” and two photo-exhibitions dedicated to the history of Arctic region development and its present state; “Discovery of the new era for natural sciences”, commemorating the International Year of the Periodic Table of the Chemical Elements. In total 2291 people visited the exhibitions in 2019;
- * mobile exhibitions “Engineering genius of Shukhov”, organized as a part of the awareness-raising project “Intellectual Property

at Height 56", visited by Moscow citizens and tourists (more than seven thousand people); "The history of inventive thought in the Russian Empire", presented at the 5th International Professional Forum "Book. Culture. Education. Innovation" (Crimea-2019) (Sudak, Republic of Crimea) and visited by more than one thousand people;

- * virtual exhibitions "Discovery of the new era for natural sciences", "Arctic: driver for economic growth" for mentors and students of the Federal Chain of children's technoparks "Quantorium" (1126 people from 65 Federal Subjects of the Russian Federation).

To publicly promote the documents of the State Patent Collection, five thematic collections of Russian patent documents were prepared and published in the National Electronic Library: "Vladimir Shukhov (1853–1939). Outstanding Russian scientist and engineer"; "The driving force of change: Women in innovation and creativity"; "Intelligence at the service of the theatre", "Young inventors – the beginning of a long path", "Lev Termen – the inventor of the Theremin".

Social media profiles of the FIPS All-Russian Patent And Technical Library are constantly updated with the new information: Instagram, Facebook, VKontakte, with total of 2757 subscribers and group members.

Rospatent participation in all significant events always has comprehensive information support (preparation of texts of press releases, announcements, interviews, comments with further publication of information on the websites of the Office, in the media, in social networks). Thus, in the "Conferences and Seminars" and "Thematic Meetings" Sections there were published: 603 articles on the Rospatent Website, 849 articles on the FIPS Website, including reposts.

With Rospatent transitioning to digital formats of interaction with consumers of public services, which is characterized by reducing the terms, increasing the availability, transparency and security of provided public services, the implementation of blockchain technology and artificial intelligence methods into Rospatent activities are being carried out.

For this purpose, in 2019 the 2nd International Conference "Digital Transformation: Focus on IP" was held. The conference program included 2 plenary sessions, 19 working sections, 7 partner sections (Skolkovo Founda-

tion, Autonomous Non-Profit Organization "Digital Economy", Association for the Development of Cluster and Technology Parks of Russia, Moscow City Telephone Network, National Technology Transfer Association), Patent Analytics Day, Presentations in the "My country – My Russia" competition, special foreign section, as well as a business game for young people and pitch-session with Russian Venture Company investors, Business Accelerator "Ledokol", Startup show, TED-lecture. During the Conference, Agreements were signed between FIPS and Nexia Pacioli Group of Companies, Stroganov Moscow State Academy of Arts and Industry, Moscow City Telephone Network, National Technology Transfer Association, and INNOKAM. The conference was visited by 893 participants, including 165 speakers, 46 foreign participants, and speakers from 20 countries. For participants a series of activities were organized: art-show "Human in the world of digital transformation: challenge accepted", excursions to the open funds of Polytechnical museum and to residents of Special Economic Zone "Technopolis Moskva", AR-matrix "FOCUS ON IP" in SPHEROID UNIVERSE AR app (App Store/Google Play), "Promobot" robot with conference details and photo printing, photo areas and selfies using AI, "Digital artist" module, table football. More than 70 reporters attended the Conference, the media posted more than 30 publications, more than 190 messages and TV stories were published, and 78 interviews with participants. Online broadcasting was organized (number of views on the Rospatent/FIPS Youtube channel – 1500).

In order to create positive image of the activities of Rospatent and its subordinate institutions in the framework of preparing and carrying out socially significant events, in cooperation with video and TV-signal contractors there were created:

- * promotional videos:
 - 2.0 International Conference "Digital Transformation: Focus on IP";
 - 2.0 International Conference "Digital Transformation: Focus on IP" 3. Strategic session #Focus on IP";
 - Story on 2.0 International Conference "Digital Transformation: Focus on IP";
- * reporting videos:
 - Collegial Meeting of Rospatent;
 - Results of the 2.0 International Conference "Digital Transformation: Focus on IP";
 - Results of the XXIII Rospatent International Conference;
 - Opening of the National Cultural Event of the Russian Federation in WIPO's re-

port. The speech of Head of Rospatent, Grigory Ivliev at the regional WIPO seminar on the Patent Cooperation Treaty (PCT) System;

- * interviews with participants of the XXIII Rospatent International Conference:
 - Lilia Gumerova – Chair of the Federation Council Committee on Science, Education, and Culture;
 - Saule Tlevlessova – Eurasian Patent Organization (EAPO) President;
 - Grigory Ivliev – the Head of Rospatent;
 - Anton Ishchenko – Chairman of the Central Council of the All-Russian Society of Inventors and Innovators;
 - Natalia Zolotykh – Vice-President of “OPORA RUSSIA”.

All video materials are published on the Rospatent website, link: <https://rupto.ru/ru/sources/multimedia/video/> and on the official Youtube channel <https://youtu.be/>

In collaboration with subcontractors, during the events, online-broadcasting was organized:

- * 2.0 International Conference “Digital Transformation: Focus on IP”;
- * Plenary session at 2.0 International Conference “Digital Transformation: Focus on IP”;
- * Collegial Meetings of Rospatent;
- * XXIII Rospatent International Conference.

Regular interaction with media representatives was established (responses to requests for comments, preparation of comments, interviews, etc.). Key publications statistics in media and on official Rospatent and FIPS websites:

- * Rospatent: 22048 (total number of media references from January 1, 2019 to Decem-

ber 24, 2019); 8356 (mentioning Rospatent as a key monitoring object from January 1, 2019 to December 24, 2019);

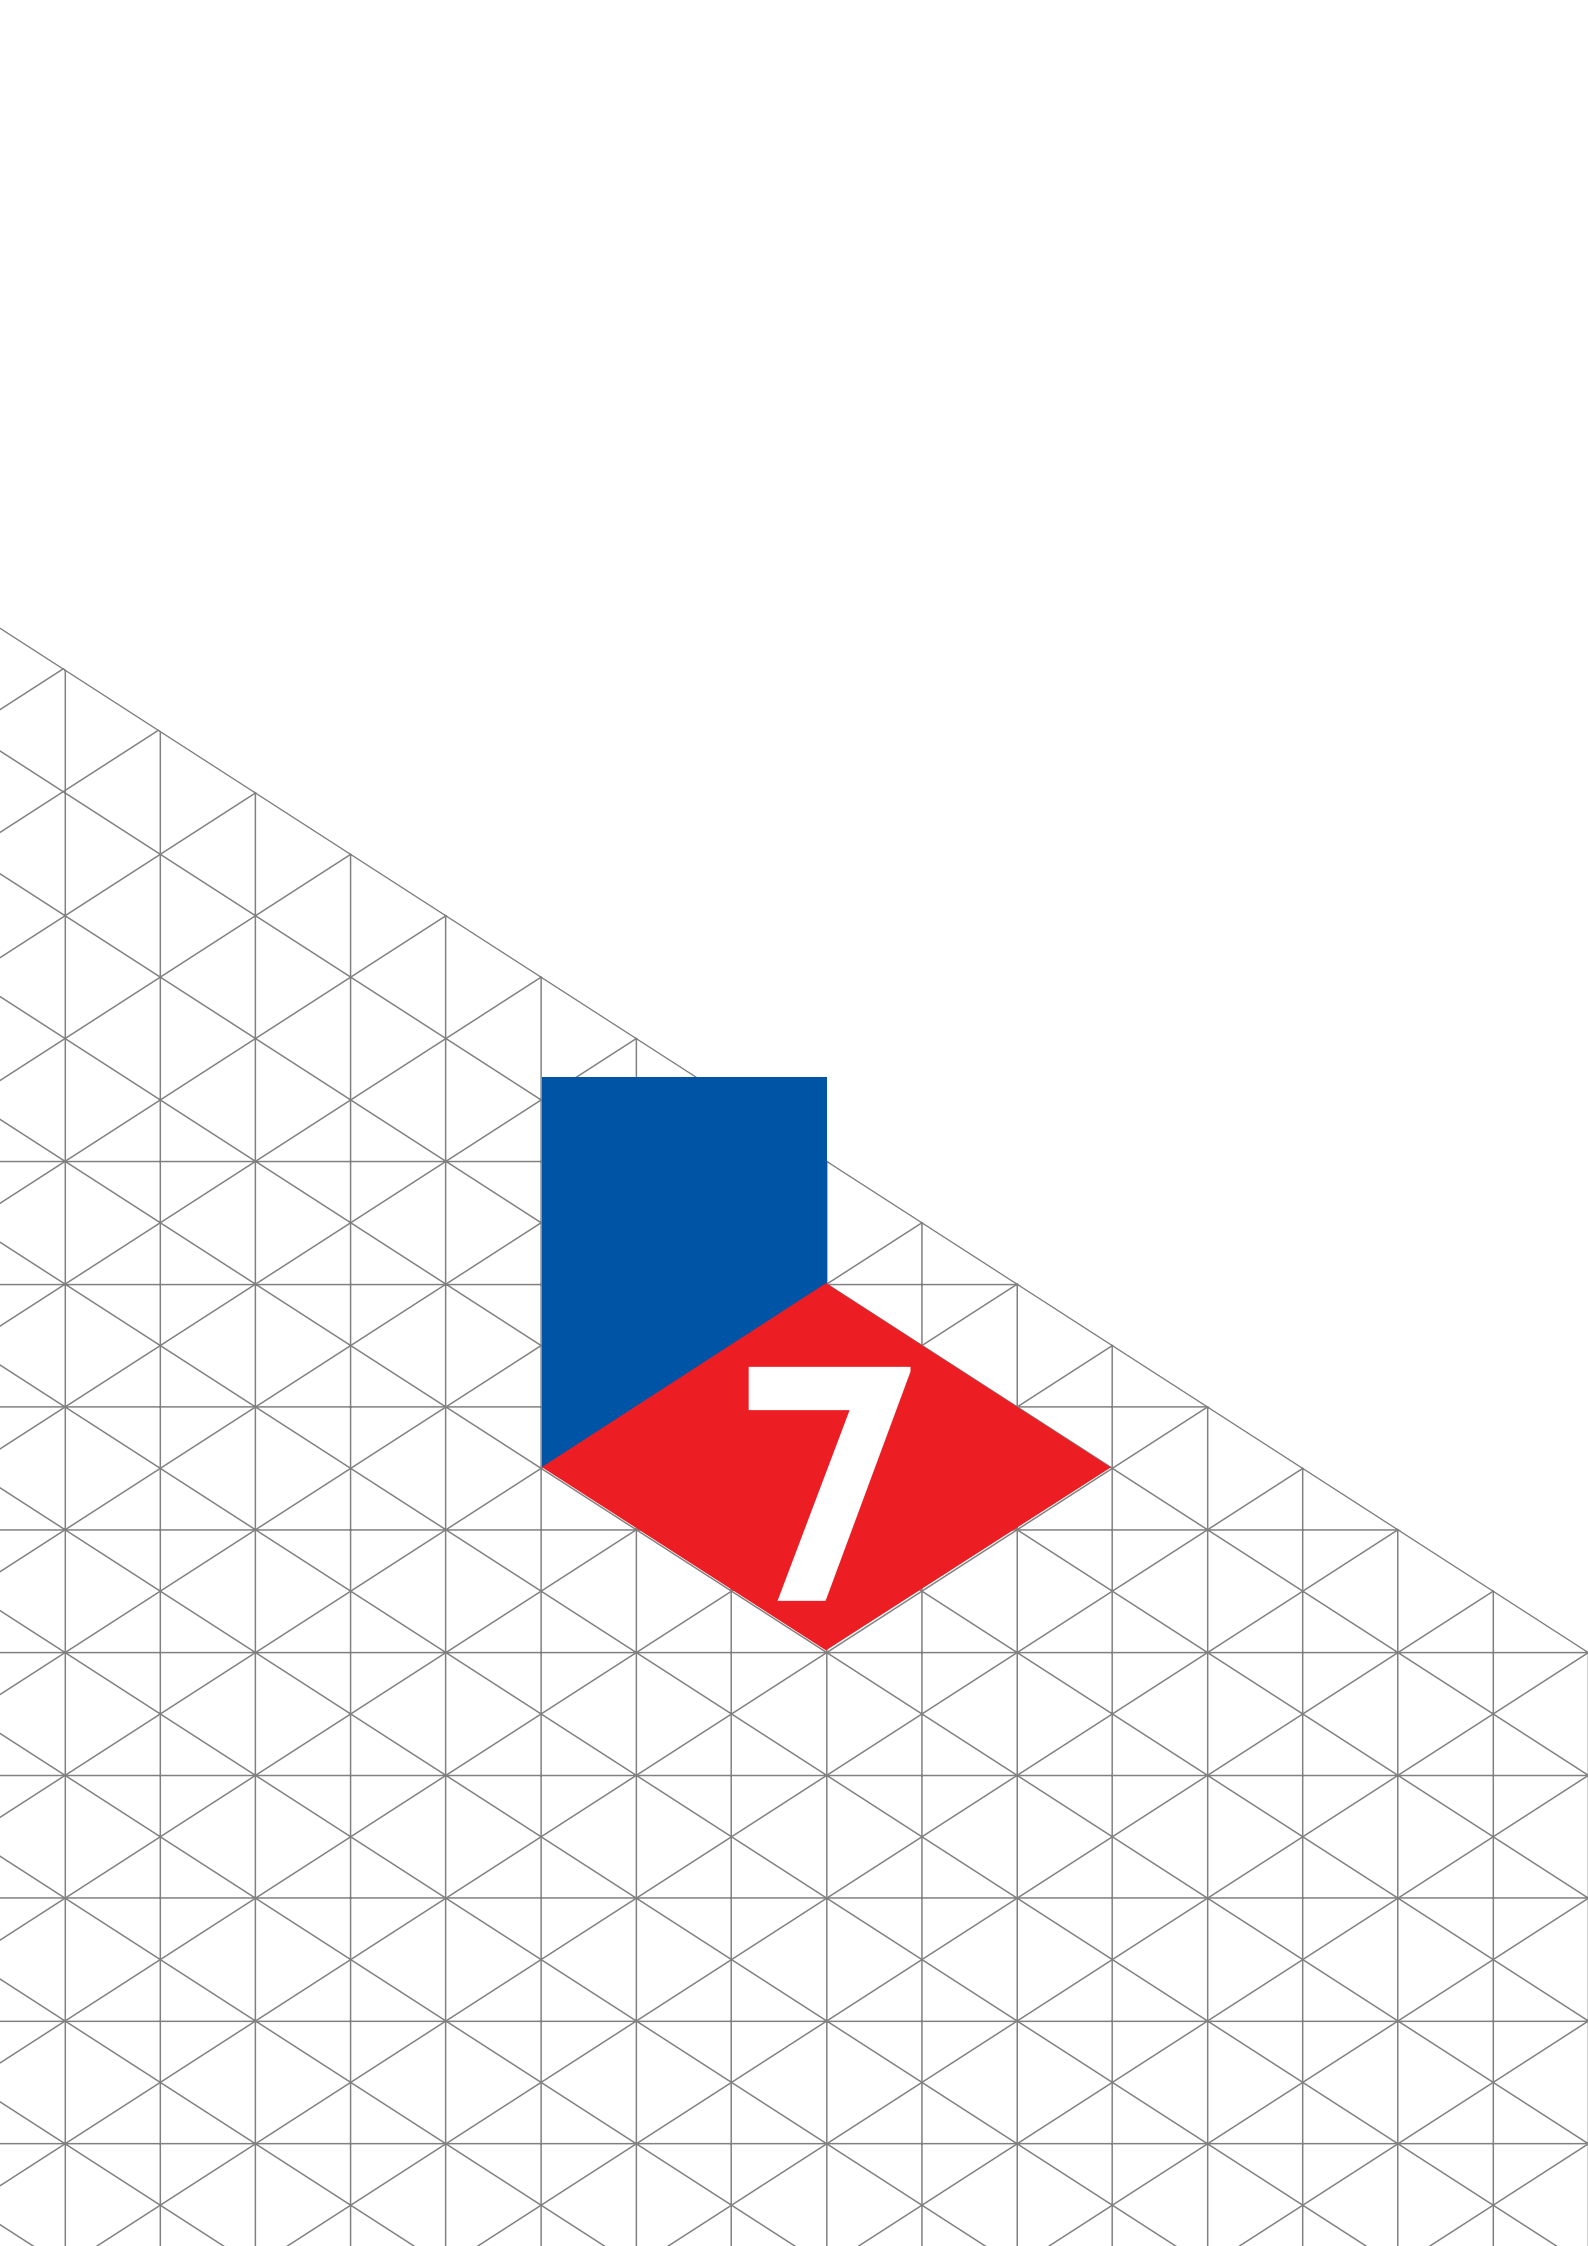

- * FIPS: 3667 (total number of media references from January 1, 2019 to December 24, 2019); 1549 (mentioning FIPS as a key monitoring object from January 1, 2019 to December 24, 2019).

Instagram and Facebook pages are constantly updated. Statistics on official Rospatent and FIPS accounts on Facebook:

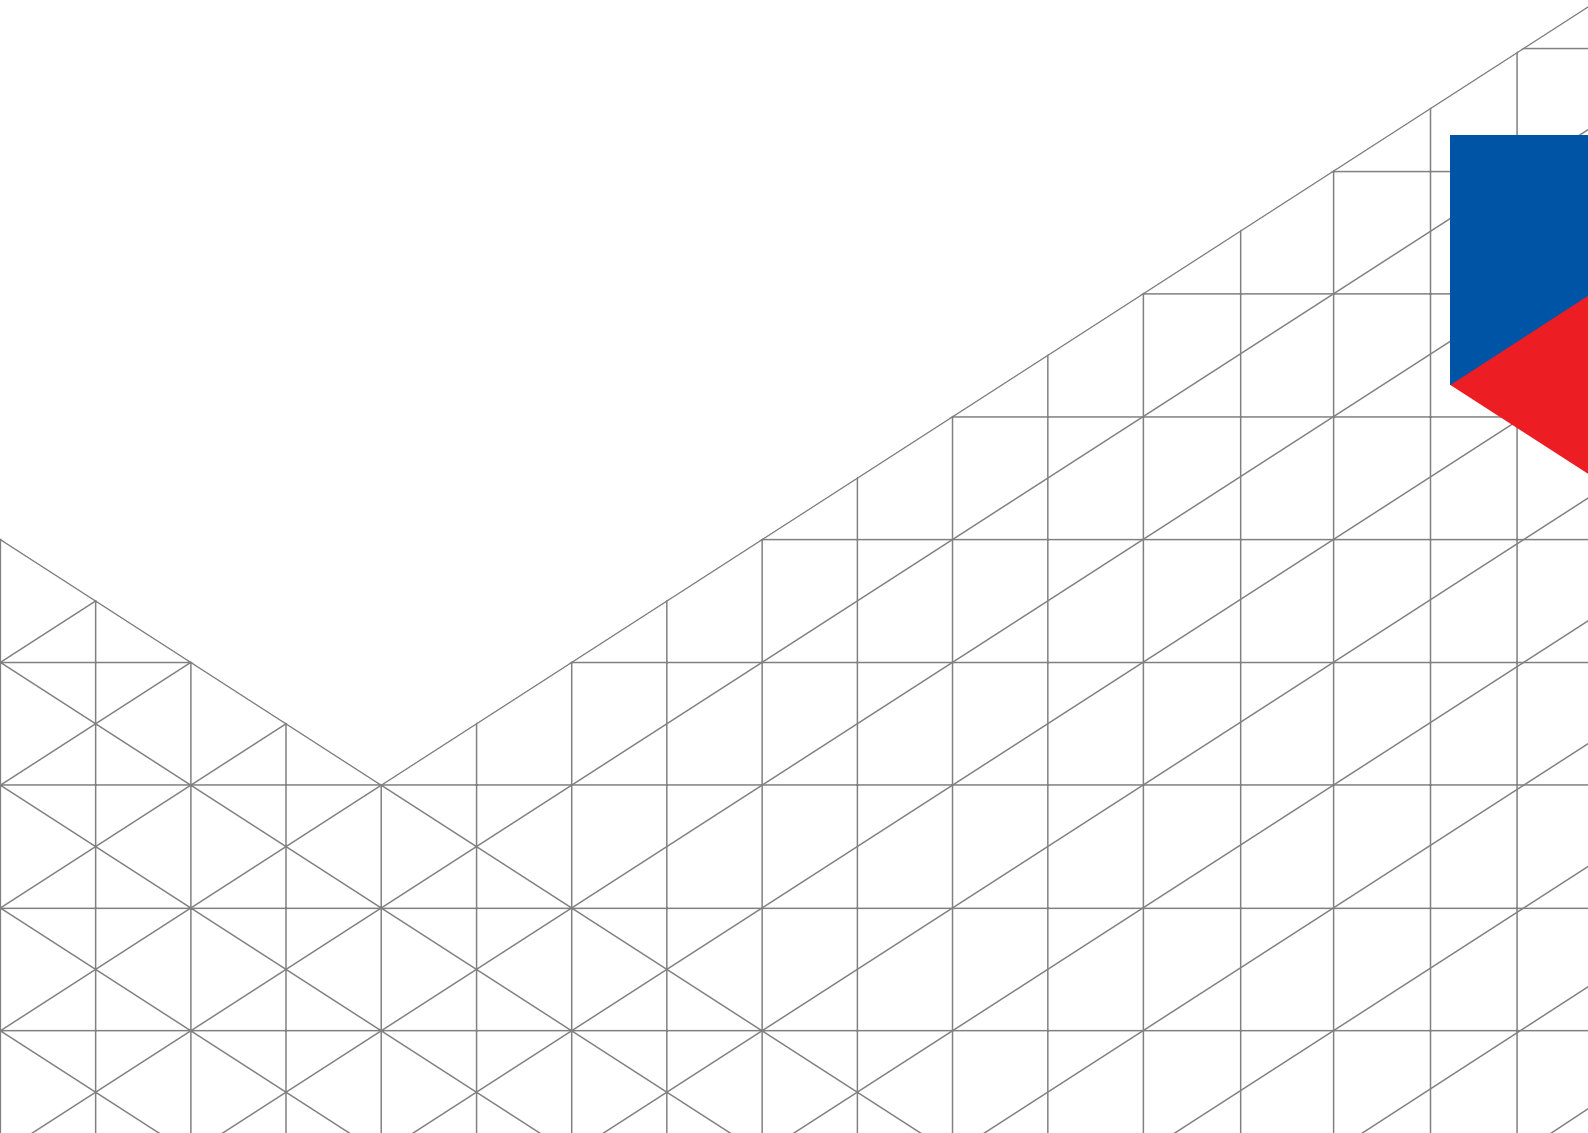

- * number of posts in Rospatent’s account: 504;
- * number of posts in FIPS account: 408.
- * On Rospatent Facebook accounts 21 videos were published and created. Including:
 - * on Rospatent International Conference – 6;
 - * IP-Academy – 2;
 - * on 2.0 International Conference “Digital Transformation: Focus on IP” – 2;
 - * on Collegial Meeting of Rospatent – 2;
 - * Grigory Ivliev’s Interview – 4;
 - * Other topics – 5.

Public’s interest in the official website was actively supported by the official Facebook page of the Office. There were 3575 subscribers as of December 31, 2019, 27% more than by the end of 2018; the number of likes amounted to 3137 (24% more) without additional advertising for subscribers’ involvement.

The total coverage of publications was more than 260 thousand users. Despite the relatively low number of subscribers, the Rospatent’s Facebook page posts consistently showed high levels of user engagement (clicks on photos or post links, likes on posts, comments, and reposts).

MODERN
PATENT ANALYTICS.
FIPS PROJECT
OFFICE PRACTICE

O. Neretin,

Director, Federal Institute of Industrial Property

O. Ena,

Head, FIPS Project Office

INTRODUCTION

Since 2016, Rospatent has a specialized division called FIPS Project Office, which provides expert and analytical support to the Russian companies on a wide range of tasks, including analysis of investment options, assessment of the competitiveness of Russian technologies, ways of production diversification, search for the best available technologies, etc.

In three years, over 50 projects were completed for various economic sectors: oil and gas, transport, chemical industry, metallurgy and ICT.

Our customers (Russian Railways, United Engine Corporation, Novolipetsk Steel, Russian Export Center, Gazprom, Gazpromneft, Transneft, etc.) used the results of consultations with the FIPS Project Office to adjust their R&D programs and plans, assess the prospects for financing new projects and identify technologies that can be successfully traded on foreign markets.

7.1.

INSIGHT MANAGED ANALITICS

The key features of the FIPS Project Office's products and services are an in-depth technical analysis of the most valuable technologies and products of industry-leading companies, as well as our in-house methodology of insight-driven patent analytics, which provides tailored practical recommendations to Russian companies on how to react to certain activities of the world's leading companies (such as product development or market launch) in the field of customer's technological priorities.

Industries, in which more than 3 complex projects have been completed:

1. Oil and gas: upstream. We have earned extensive experience in the field of hydraulic fracturing, increased oil recovery, intensification of inflow, etc.;
2. Oil and gas: downstream. We have earned extensive experience in the field of hydrocracking, catalytic cracking, isomerization, alkylation, etc.;
3. Oil and gas: middle stream. We have earned extensive experience in the field of monitoring and diagnostics of oil pipelines, recovery of oil product vapors, reduction of hydraulic losses, energy efficiency, etc.;
4. Rail transport. We have earned extensive experience in the field of railway infrastructure, power plants, diagnostic equipment, etc.;
5. ICT. We have earned extensive experience in the field of AI, 5G networks, quantum technologies, predictive analytics, and Smart city systems.

Furthermore, complex projects have been completed for the engine building sector, chemical, coal and metallurgical industries, as well as for the military-industrial complex.

Using our products and services, we solve the following tasks:

- * search for the best modern technologies and products in the sphere of the customer's interests;
- * determining the customer's place on the technological world landscape;
- * analyse of the strategies for legal protection of technologies and products of leading companies

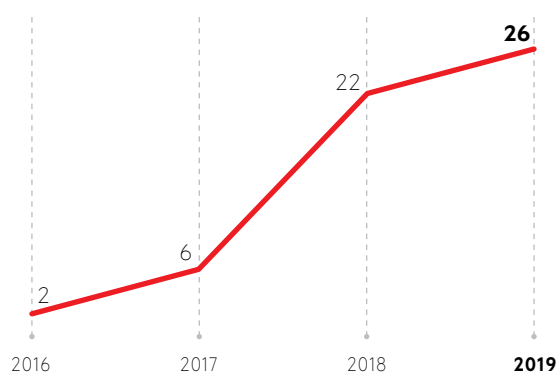

- * cataloging of modern technologies and products on a given topic;
- * determining the maturity and methods of legal protection of technologies;
- * analysis of product lines of global leading companies;
- * monitoring and analyzing of promising investment areas;
- * identification of potentially valuable technical solutions in the patent portfolio;
- * strengthening legal protection for valuable technologies and products of the customer.

26 projects were completed in 2019:

- * 7 domain-specific patent landscapes for the following companies: PJSC Gazpromneft, PJSC United Engine Corporation, JSC Tactical Missile Armament Corporation, PJSC Sibur, and PJSC Transneft. Our work on these patent landscapes is closely linked to the technological priorities and key innovations of the companies' own innovation development programs, which allows applying the results obtained to define and correct the client's development strategy, as well as at the operational level in the making-up of R&D portfolios and the purchase of promising technologies.
- * 9 Express patent landscapes, including 3 on digital technologies. Work performed for the following companies: OJSC Novolipetsk Steel, JSC Rostelecom, JSC InfoWatch, and international law firm Dentos. The open express landscape Smart City is also published in the English version.
- * 1 Patent technology intelligence for Siberian Coal Energy Company PJSC (SUEK). Patent technology intelligence is aimed at identifying and analyzing technologies and products of leading companies in the field of the client's activities.
- * 3 R&D Entourage research projects for PJSC Gazprom. R&D Entourage is a specialized tool for monitoring R&D prospects. R&D Entourage toolkit provides a comprehensive view of trends and directions in patenting for the purpose of outlining a promising R&D project, which is then proposed for implementation within the framework of government programs or as a portfolio of high-tech projects of a large company.
- * 6 specialized research projects for PJSC Gazprom.

The dynamics of new projects is shown in the figure.

Figure
Dynamics of new projects' completion

7.2.

CONSULTING PRODUCTS AND SERVICES

FIPS Project Office is constantly expanding its range of products and services, trying to cover as many business problems as possible that require patent analytics.

In addition to the products which have become classic ones (such as domain-specific patent landscape and patent technology intelligence), new analytical products were launched in 2019. The most important new products of 2019 are:

COMPREHENSIVE SUPPORT IN ACQUISITION OF NEW TECHNOLOGIES

This product includes a variety of services, the final set of which is determined by the results of expert meetings with the customer.

The services include:

- * identification of potentially patentable solutions based on R&D materials, initial design data and other technical documentation;
- * comparison of the customer's technologies with those of leading industry companies;
- * monitoring of technical solutions of competing companies;
- * search for target companies which hold the technologies that are profitable for the customer to purchase;
- * assessment of the prospects for commercialization of the customer's technologies, combining patenting and know-how for thorough legal protection of commercially attractive technologies of the customer;
- * support for technology transfer in Russia and abroad (with the involvement of specialized foreign companies).

ADVANCED PATENT LANDSCAPE

Advanced patent landscape is an extension of the Express patent landscape with some important features of the domain-specific patent landscape. In contrast to the Express patent landscape, the extended patent landscape involves thorough domain modeling, a detailed search strategy, semi-automatic quality control of the patent collection, selective tagging, and description on 2 model bases. Some restrictions are imposed on the number of patent families in the collection and on the search depth. At the same time, the research time is reduced to 2.5 months (which is twice as fast as the domain-specific patent landscape), while the cost of work is reduced by 2.5 times compared to the cost of the domain-specific patent landscape.

7.3.

OLD AND NEW BUSINESS TASKS

The extension of the product line has led FIPS Project Office to an extension of the range of business tasks solved with the help of patent analytics. The most important business tasks have been worked out within complex industry projects.

Business needs and solutions:

- * analysis of promising areas of testing: comparison of different technological areas, detailed technological analysis of the most valuable industry technologies, identification of technologies aimed at solving industry problems (service life, accuracy, sensitivity, etc.);
- * modern go-to-market strategies: analysis of the scope of patent strategies of global leading companies, analysis of the pace and gaps of technology protection in different countries, technologies that are most important for industry leading companies;
- * new areas of application of technologies: analysis of the scope and application areas of leading companies' products, identification of specifications with contrasting modes and methods of application (different voltage, low temperatures, etc.).

7.4.

DEVELOPMENT OF COMPETENCIES

The Project Office develops competencies in patent analytics in four following ways:

1. Continuous professional education. In 2019, employees of the FIPS Project Office obtained 21 international certificates, including one international certificate for technology transfer and technology licensing (WIPO-CIPI-INPI), 8 international certificates for professional patent search (WIPO DL-318) as well as 12 international certificates for intellectual property management (WIPO DL-450). In addition, Project Office employees undergo continuous training in data mining (Python programming, machine learning, etc.).
2. Analysis of sources and updating the knowledge base on patent analytics. We regularly monitor the most interesting publications in order to compile a Compendium of the FIPS Project Office on patent analytics (which includes scientific journals, Twitter feeds, research, third-party patent landscapes). As of December 31, 2019, the Compendium of the Project Office includes more than 1 thousand scientific articles and reports.
3. Proactive participation in conferences and business forums. Project Office specialists participate in almost all Russian and foreign events on patent analytics and technology policy making. Every year, the FIPS Project Office holds an exhibition stand at the EPOPIC, the largest European conference on patent information. Employees of the FIPS Project Office deliver presentations and participate in round tables at foreign conferences. Head of the FIPS Project Office Oleg Ena is invited to moderate major oil and gas congresses (such as Petrochemical & Refining Congress), and delivers keynote speeches at international IP conferences (IP World Summit, IP Energy Summit, etc.) In 2019 the FIPS Project Office has participated in more than 80 events, including both specialized conferences and corporate universities of leading Russian companies.
4. Analysis of feedback from completed projects. As the project completion advances, Project Office employees analyze their progress and the difficulties they have encountered. This practice allows us to make each new project better and more complete, both in terms of patent analytics application and in terms of industry particularities. The results of the analysis obtained for the oil and gas industry, transport, metallurgy, digital technologies and other sectors of the economy are summarized and used in new projects with the necessary adaptation.

7.5.

EDUCATIONAL AND TRAINING PROGRAMS ON PATENT ANALYTICS

By accumulating unique competencies, the Project Office actively promotes modern approaches to patent analytics.

In 2019, we have continued the work on developing tools for Russian scientific and educational organizations used to identify and specify scientific and technological priorities based on search and analysis of patent data.

In 2019, a range of events was organized to propose new FIPS analytical products in the field of information and analytical support for the implementation of the Strategy for Scientific and Technological Development of the Russian Federation, determining the scientific and technological priorities of economic sectors, high-tech companies, and Russian scientific and educational organizations. In order to highlight and promote modern methodological approaches and analytical tools, FIPS has developed training program on patent analytics for participants in the Russian innovation system.

In order to reveal the nuances and breadth of scope of patent analytics, the Project Office held 6 Patent Analytics Lounge seminars on the following topics:

1. Technological disclosure
2. Patent families
3. Patent citation
4. Technology transfer
5. Dates
6. Patenting IT solutions

Complete videos of Patent Analytics Lounge are available free of charge on the Project Office's Facebook channel

Employees of the Project Office lectured within the framework of educational programs of the FIPS Research and Education Center and the Russian Research Institute "Center" on the following topics:

- * IP Management
- * IP Marketing
- * Technology management based on patent analytics
- * Diversification of the Military-industrial complex

7.6.

OPENNESS TO PARTNERSHIP

One of the promising areas of development of the Project Office is the growth of expertise in the field of modern technology management.

In 2019, we started working with the enterprises in Russia and abroad (France, Sweden, Singapore) in related areas of technology management, such as marketing research, technology transfer support, corporate know-how, financial audit, asset valuation, etc.

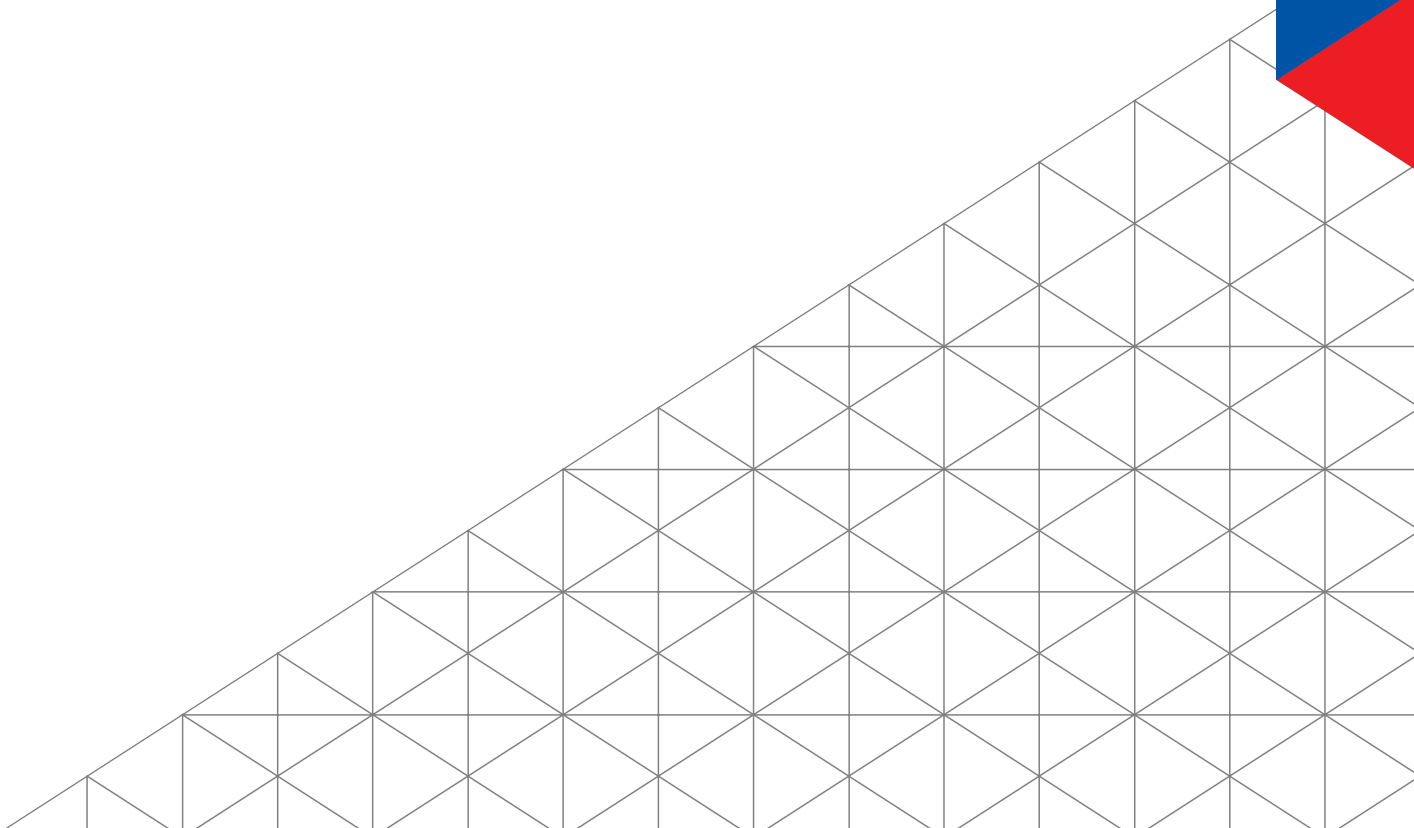

This collaboration provides us with a wide scope of expertise in technology management, including closing the last mile of technology transfer, which is documentary and

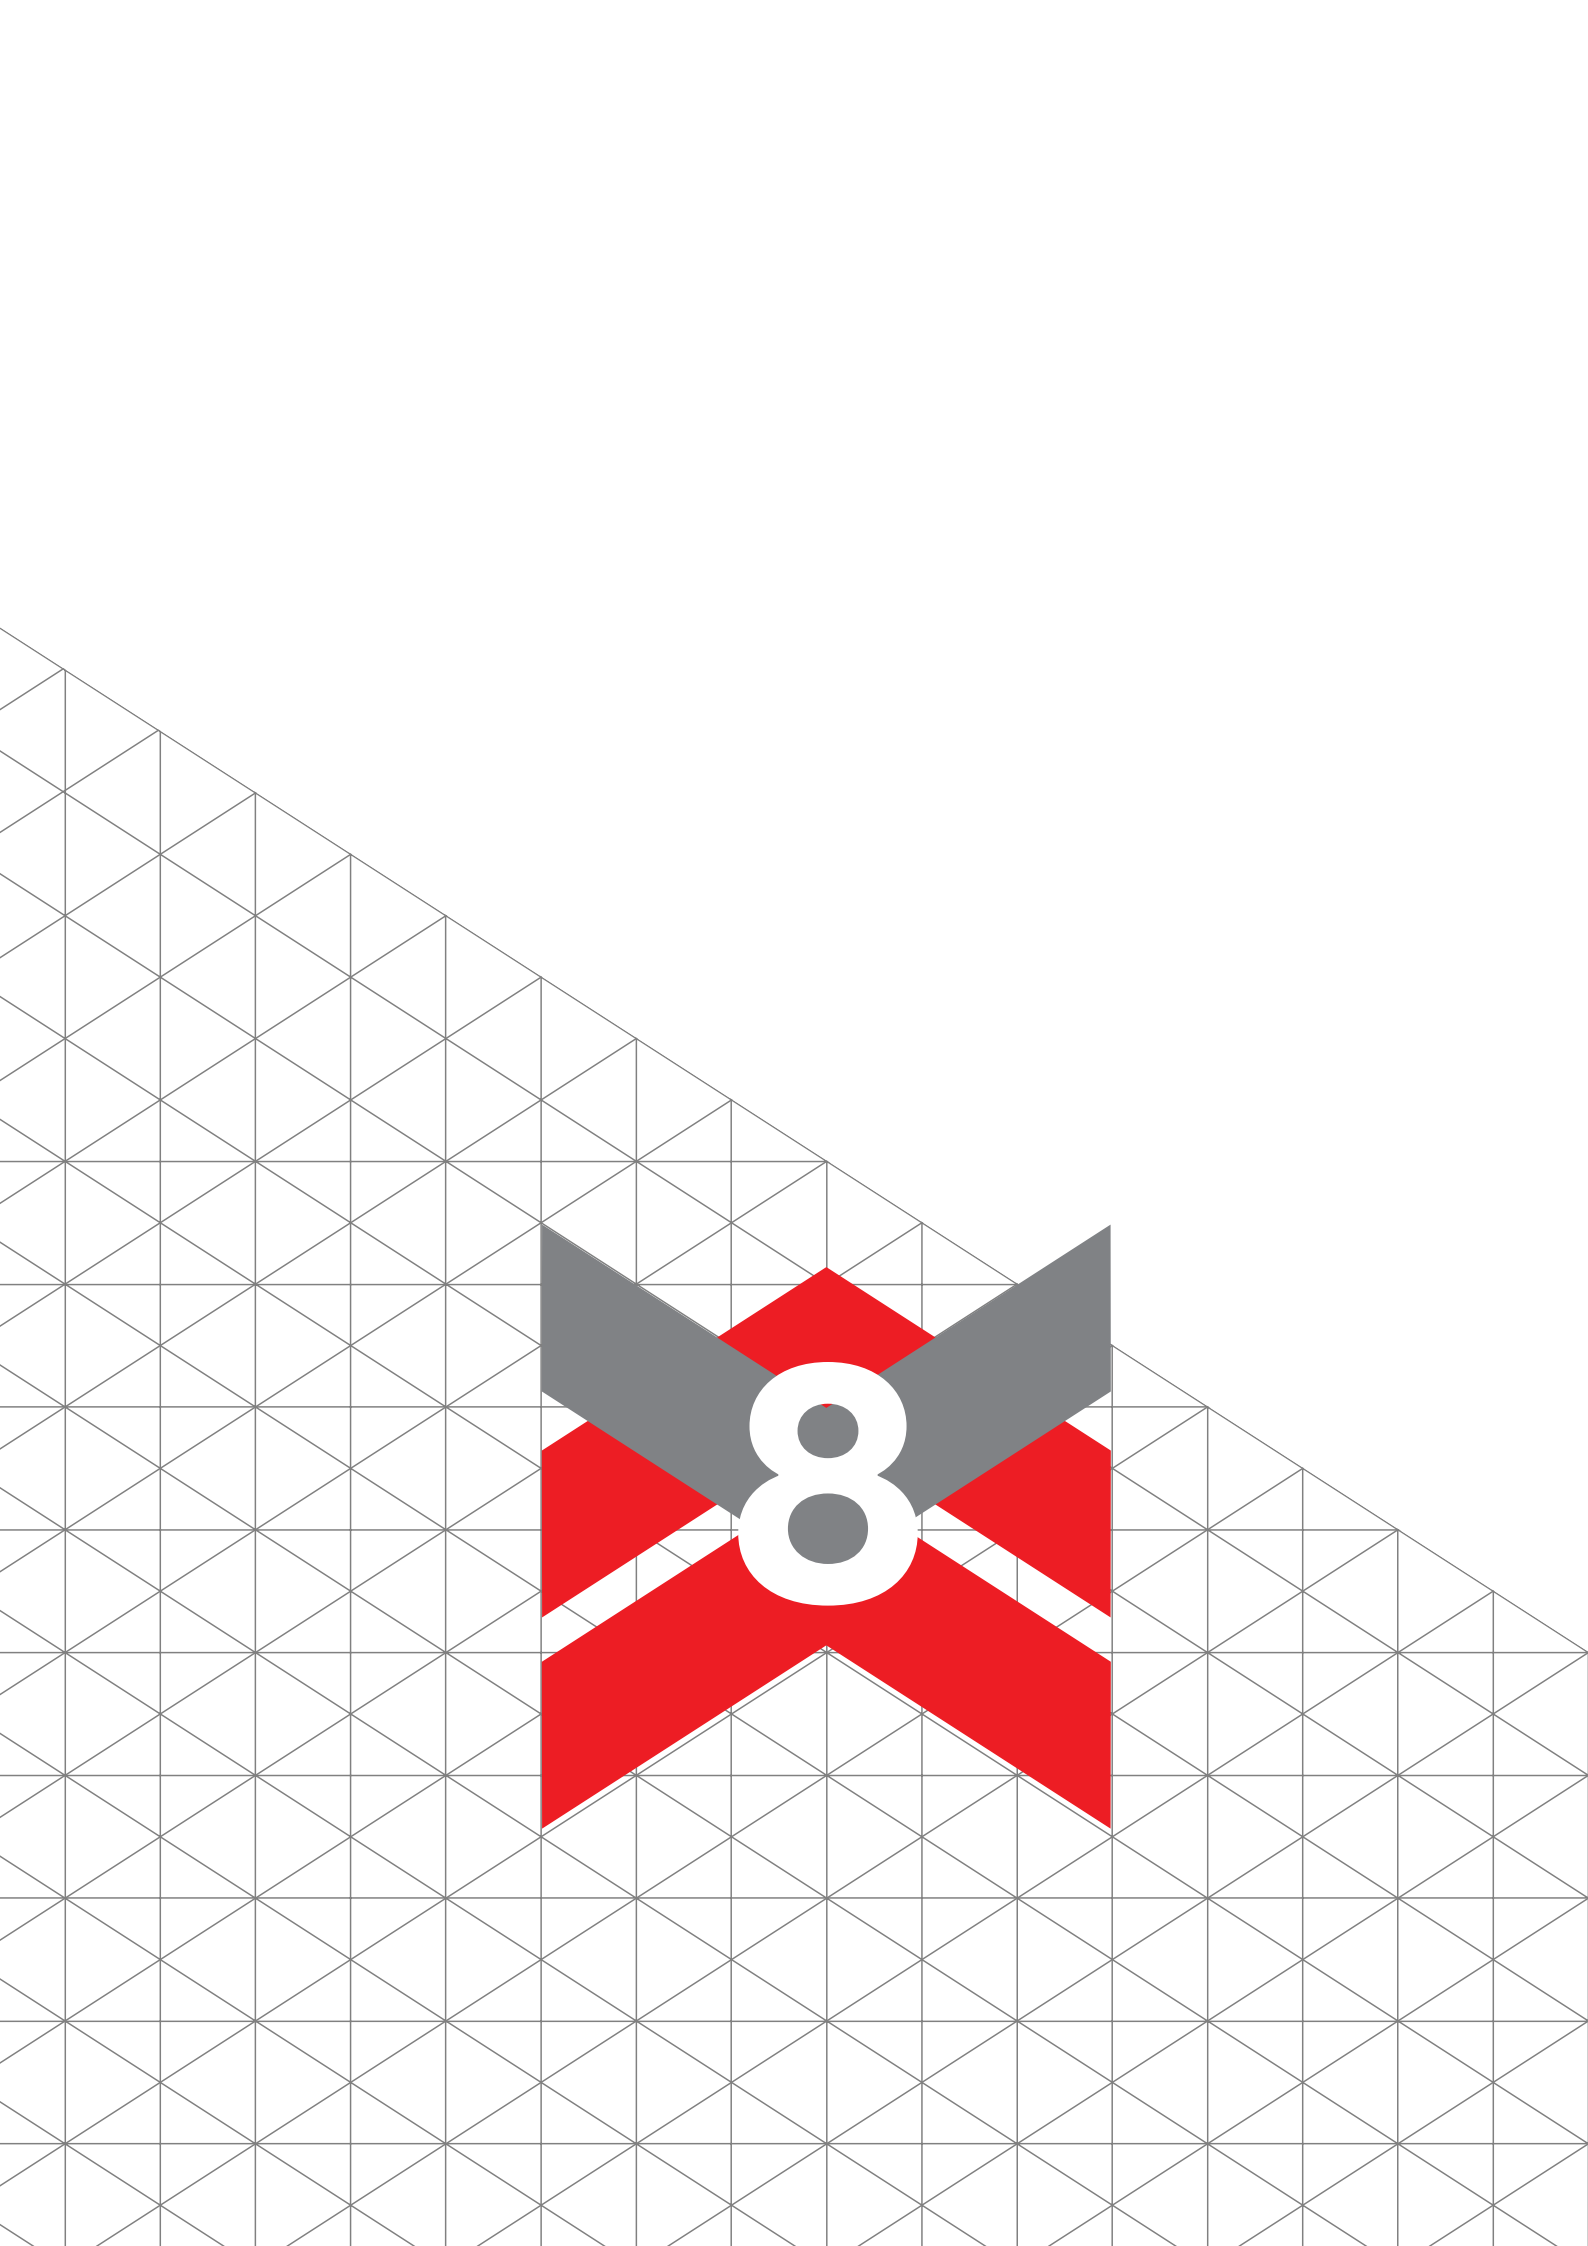

legal support of transactions with foreign companies for direct (purchase) and reverse (sale) technology transfer.

In order to scale up technology consulting based on patent analytics, a network of franchisee centers is being developed in the regions of Russia. Such centers perform research in the field of patent analytics (mainly Express patent landscapes) with established quality indicators and under the supervision of the FIPS Project Office.

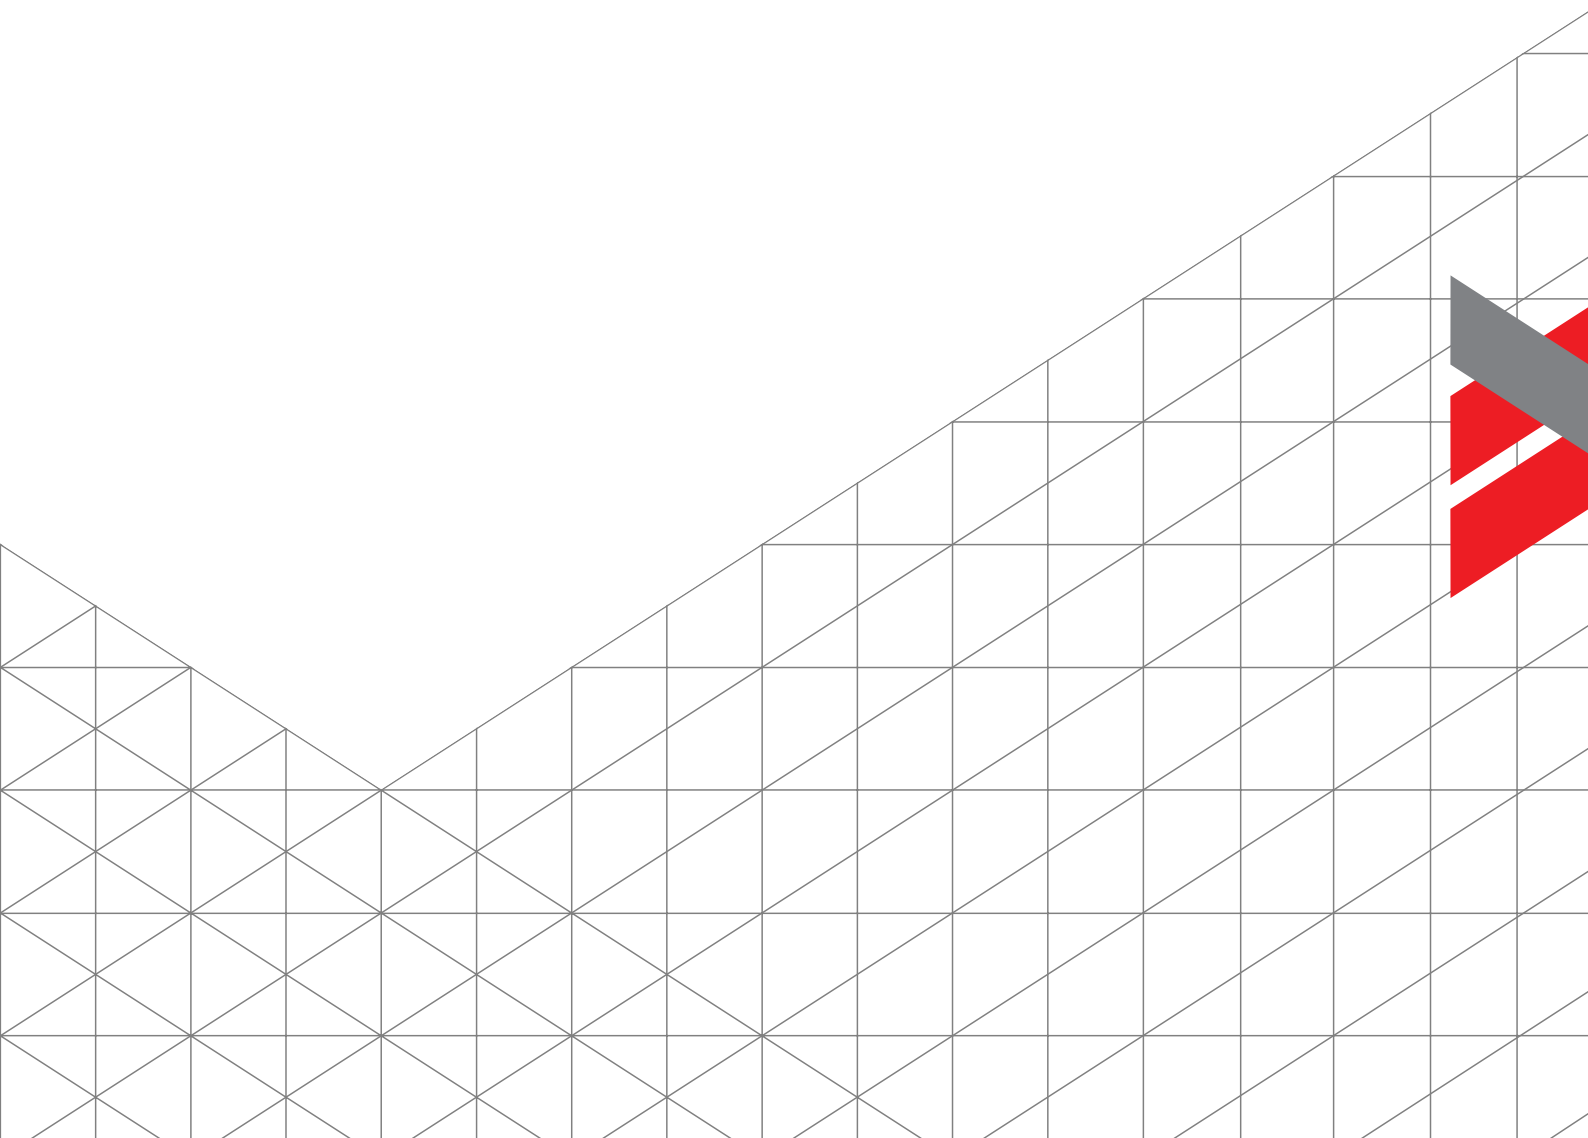

Although we already have the existing cooperative network, the FIPS Project Office pays great attention to further development of partnerships. Cooperation within the win-win concept with other centers of competence and expertise is a priority task of the Project Office.

ROSPATENT IN THE PROJECT “OPEN GOVERNMENT”

E. Kiseleva,

Director, Financial-
Administrative
Department

INTRODUCTION

Implementation of the concept of the Rospatent openness was ensured in 2019 due to transparency of financial activities of the Office, strengthening of personnel potential with highly qualified specialists, anti-corruption measures and prevention of other offenses, improvement of quality and availability of information resources on official Rospatent website.

In 2019, Rospatent ensured the growth of income to the federal budget, the full amount of which significantly exceeded the expenses of the State on Rospatent functions.

Rospatent and FIPS personnel reserves were formed based on detection and maximal use

of the potential of promising employees in order to increase their professional level.

A lot of attention was paid to anti-corruption measures with the organization of ongoing monitoring of implementation of the events in this sphere by subordinate organizations.

The development of the structure of the official Rospatent website, including the section "Open Data", allowed Rospatent to double increase the use of open data by users of the website compared with 2018 and to get the first place in the rating "Federal executive bodies. Open data". Official accounts of Rospatent in social networks intensified the interest of users in the activities of Rospatent and raised the traffic of the official website.

8.1.

MAIN FINANCIAL INDICATORS OF ROSPATENT

The federal budget revenues administered by Rospatent in 2019 amounted to 7679,1 million rubles.

Compared to 2018, in 2019, the federal budget revenues increased by 581.8 million rubles (table 7.1 of Annex 7 to the Report).

The expenses of Rospatent are carried out from the federal budget and income-generating activities of subordinate institutions.

In 2019, Rospatent expenses amounted to 4 019 201.7 thousand rubles, including the federal budget funds (3 532 166.4 thousand rubles) (87.9% of the total expenses), income-generating activities (487 035.3 thousand rubles) (12.1% of the total amount) (table 7.2 of Annex 7 to the Report).

8.2.

HUMAN-RESOURCES AND ANTI-CORRUPTION ACTIVITIES

The human-resources policy of Rospatent is conducted in accordance with the requirements of Federal Law No. 79-FZ dated 27.07.2004 "About the Civil Public Service of the Russian Federation". Attraction of highly skilled specialists to the public service in Rospatent is one of the components of the human-resources policy.

In this regard, in 2019 information on vacant positions was published on the official Rospatent Internet website, as well as on other job search resources.

A competition for filling vacant positions in the state civil service was held in Rospatent in 2019.

Totally 15 people were hired by Rospatent in 2019, among them:

- * 2 people – according to the results of the competition;
- * 4 people – under a terminal contract (for the period of maternity leave of the main employee);
- * 8 people – for positions with the performance of duties which is related to admission of state secrets;
- * 1 person is hired from the candidates pool.

In addition, according to the results of the competition, 3 people were added to the candidates pool.

In December 2019, Rospatent conducted a review of Rospatent federal state civil employees (hereinafter – civil employees). According to the results of the review, all civil employees were recognized as relevant to their position, 12 civil employees were added to the candidates pool of Rospatent.

Intercourse with employees in subordinate institutions is also aimed at attracting new candidates in order to replace available vacant posts, special attention is paid to increasing the number of examiners (see table 7.3 of Annex 7 to the Report).

In 2019, in order to attract new specialists for the examiners job, FIPS continued the realization of internship programs "Inventions and Utility Models" and "Trademarks".

The interns received theoretical training in groups under specially designed programs. At the same time, they mastered the practical skills of the state examiner under the guidance of experienced specialists. 72 interns were hired in 2019 ("Inventions and Utility Models" – 39 people, "Trademarks" – 32 people).

In addition, Rospatent posted information about vacant posts on the Internet; interacted with specialized universities through the Career divisions of graduates and students and Employment centers around Moscow and the Moscow region. Employees of the HR Division alongside with employees from industry examiner divisions represented FIPS in career fairs. In 2019, FIPS appointed 150 people for examiner positions.

The candidates pool of Rospatent and FIPS was formed in order to identify and amplify promising employees, to maximize their potential, to increase the level of motivation for professional growth and to further stimulate them to improve their educational level and professional qualifications.

37 FIPS employees take training in the magistracy of the Russian State Academy of Intellectual Property (RSAIP) under master programs "Law", "Management", "Intellectual Property Management". In 2019, 19 FIPS employees are going to study at the RSAIP magistracy under the master program "Law", as well as 1 FIPS employee is going to study at the RSAIP graduate studies to receive additional

education under the “Master of Business Administration (MBA)” program.

As part of the anti-corruption policy in 2019 in Rospatent, an effective Commission was established to comply with the official conduct requirements of federal state civil employees of the Federal Intellectual Property Service and employees of organizations created to fulfill the tasks assigned to the Federal Intellectual Property Service and to resolve conflict of interest (hereinafter – the Commission). In connection with the organizational and staffing events, under order of Rospatent dated July 8, 2019, a new structure of the Commission was approved, the information about it was posted in the special section on anti-corruption issues on the official website of Rospatent in the information and telecommunication network Internet.

The division for public service and human-resources, control and document management of the Financial and Administrative Department for the prevention of corruption and other offenses (hereinafter – the Division) provides practical and methodological assistance to Rospatent employees and subordinate organizations on anti-corruption issues, including control after the fulfillment of the obligation to notify the representative of the employer of other paid work. In 2019, 17 notifications addressed to the Head of Rospatent about the intention to perform other paid work were received.

In the current year, in Rospatent state civil employees never failed to comply with any restrictions, prohibitions and non-fulfillment of anti-corruption obligations, as well as there weren't any violations of restrictions regarding the reception of gifts and the procedure for gifts handing-over. In connection with protocol events, business trips and other official events, the participation in which is related to the official position or the performance of official duties, in 2019 the Division received 3 notifications on reception of a gift. All gifts are accepted for accounting.

In 2019, as part of measures aimed at creating a negative attitude to corruption, Rospatent and its subordinate institutions employees were informed about the provisions of the Russian Federation anti-corruption legislation, the effects of corruption on society and sanctions for corruption offenses.

In 2019, career enhancement was provided by federal state civil employees, whose job

responsibilities include participating in the anti-corruption measures (1 person), including training of civil employees, who just started the civil service on educational programs in the sphere of anti-corruption (2 people).

As part of the implementation of paragraph 28 of the National Anti-Corruption Plan for 2018–2020, training for FIPS senior staff was conducted under the continuing education program in the sphere of anti-corruption (7 people).

Rospatent continues to monitor the personnel management in regard to the conduction of civil personnel records, including the updating of the information contained in the questionnaires which are received by Rospatent during admission to the civil service.

Rospatent organized quarterly monitoring by subordinate institutions on the implementation of various activities in the sphere of anti-corruption.

Rospatent is conducting an anti-corruption inspection of statutory and regulatory enactments, their projects and other documents in order to identify corruption factors and their subsequent elimination. Independent experts participate in this work.

Posted information is regularly updated on the official Rospatent website, in a special section on anti-corruption issues.

A trust line on anti-corruption issues is functioning in Rospatent in order to ensure the immediate access for residents and organizations to give information about corruption or violation of any requirements for official behavior of civil employees.

Rospatent takes the necessary organizational and technical measures to strengthen the on-site regime in Rospatent and its subordinate institutions to ensure transparency of contacts between civil employees of Rospatent and subordinate institutions with business representatives and individuals.

Anti-corruption issues in Rospatent and its subordinate institutions, in accordance with the plan, are considered at briefing sessions with the Head of Rospatent.

As part of the ongoing anti-corruption work in the Rospatent system, the website of the Russian Academy of Intellectual Property (RSAIP) created a section on anti-corruption issues. Also in the section “Additional Documents”

there is a check-list worked-out by the university on anti-corruption in RSAIP.

Also, higher education programs in the direction of 40.04.01 "Jurisprudence", training profiles "Legal Protection of Intellectual Property" and "Legal Protection and Protection of Intellectual Property", all forms of training within the framework of the variable part of the curriculum provide the study of the discipline "State anti-corruption policy". In the framework of the discipline, the issues of the concept of corruption as a social phenomenon, the main causes of corruption, international acts and acts of the Russian Federation on combating corruption, a national strategy and a national anti-corruption plan, law enforcement practice on combating corruption are considered.

8.3.

REALIZATION OF THE CONCEPT OF OPENNESS OF ROSPATENT

The proportion of visitors to the "Open Data" section of the official website of Rospatent increased by 27% compared with 2018.

The content and structure of the Rospatent website (www.rupto.ru), representing the activities of Rospatent within its competence, reflected the most important issues of the functioning of the intellectual property protection system in Russia.

Press releases about the events relating to the activities of Rospatent and events in the system of intellectual property protection were regularly posted, over 950 publications in total, which is 146% more than a year earlier.

New sections of the site were developed and opened: "Regional brands and appellations of origin", "Multimedia", "Public initiative", "Consultations on current issues of users", "OS Commissions", "Results of cooperation and interaction of Rospatent with regions of the Russian Federation", "Guidelines and recommendations on the implementation of administrative procedures and actions in the framework of provision of public services".

In accordance with the principles of openness, the sections "Rospatent in the Open Government System", "Structure and Guide", "Plans", "Open Data", "Public Council", "Quality Council", "Board of Rospatent", "Council by Rospatent on the legal protection of design",

"Scientific and Technical Council", "Objects of Patent Law", "Rospatent and the Regions", "International Cooperation", "The Hague System", "WIPO Standards", "Cooperation with MGSIS". The section "State Services", "Documents and Forms" and others were updated.

8.3.1. Realization of the openness plan of the Office

In the "Open Data" section, in accordance with the Schedule for disclosure of priority socially significant data sets, 23 sets, metafiles and passports of open data were updated in a machine-readable format. New open data sets were added: RSAIP educational programs, RSAIP paid educational services, Dynamics of registration of military, special and dual-purpose RIAs, the rights to which belong to the Russian Federation. a potential evaluation form is added for disclosing the open data set "Register of trademark applications". The "Open Rospatent" section regularly contained full information on the activities of collegial and advisory bodies of Rospatent in 2018: Public Council, Scientific and Technical Council, Board of the Office, Quality Council. The agendas, records and decisions of the meetings, as well as the reports that were made at the meetings, are timely published both in news on the activities of the relevant bodies and in special sections on their activities.

8.3.2. Work of the official Rospatent website

The development of the official Rospatent website (www.rupto.ru) is aimed at increasing the satisfaction of citizens, the scientific and creative public, representatives of the business community, federal executive authorities of Russia, foreign patent offices and representatives of international organizations with the Rospatent involvement, with quality, reliability and the completeness of information provided by Rospatent on the need for protection and methods of protecting the results of intellectual activity and means of individualization, information on registered results of intellectual activity; stimulation of patent activity of Russian residents and foreign applicants; access of citizens, society and business to full and up-to-date information on the activities of Rospatent via the Internet in a machine-readable form.

In 2019, new sections of the website were developed: "Legislative website map", "Fast programs", "Rospatent Annual report 2018", "Tools of open Rospatent", "Recommendations for managing IP in the regions", "Working with reference groups", "Human Resources",

“Civil Protection”, “Keeping the Register of Patent Attorneys of the Russian Federation”, “Schedule of Qualification Exams for Certification of Patent Attorneys of the Russian Federation”, “Training Videos”, “Methodology for the Development of Patent Landscapes”.

In accordance with the principles of openness, the sections “Plans”, “Collegial and Advisory Bodies”, “Public Council”, “Anti-Corruption”, “Structure and Management”, “Control and Supervision in the sphere of Legal Protection and Use of the Results of Intellectual Activity created at the expense of the federal budget”. “Patent Attorneys”, “Glossary”, the data in the sections “State Services”, “Documents and Forms” and others were updated. The service “Search for payments of Rospatent” was updated. The “Electronic Services of Rospatent” section is being updated too.

Special attention is paid to improving the methodological support for the provision of public services for state registration of the results of intellectual activity and means of individualization. The section “Regulatory legal acts” contains the Guides covering administrative procedures and actions carried out within the framework of public services.

In the “Patent of the Week” section, devoted to the most interesting patents that Russian inventors received, 38 technical solutions were published, that according to examiners of the Federal Institute of Industrial Property, have great potential for implementation and commercialization.

Press-releases on events related to the activities of Rospatent and the intellectual property protection system are regularly published on the official website, 1,452 publications (53% more than in 2018).

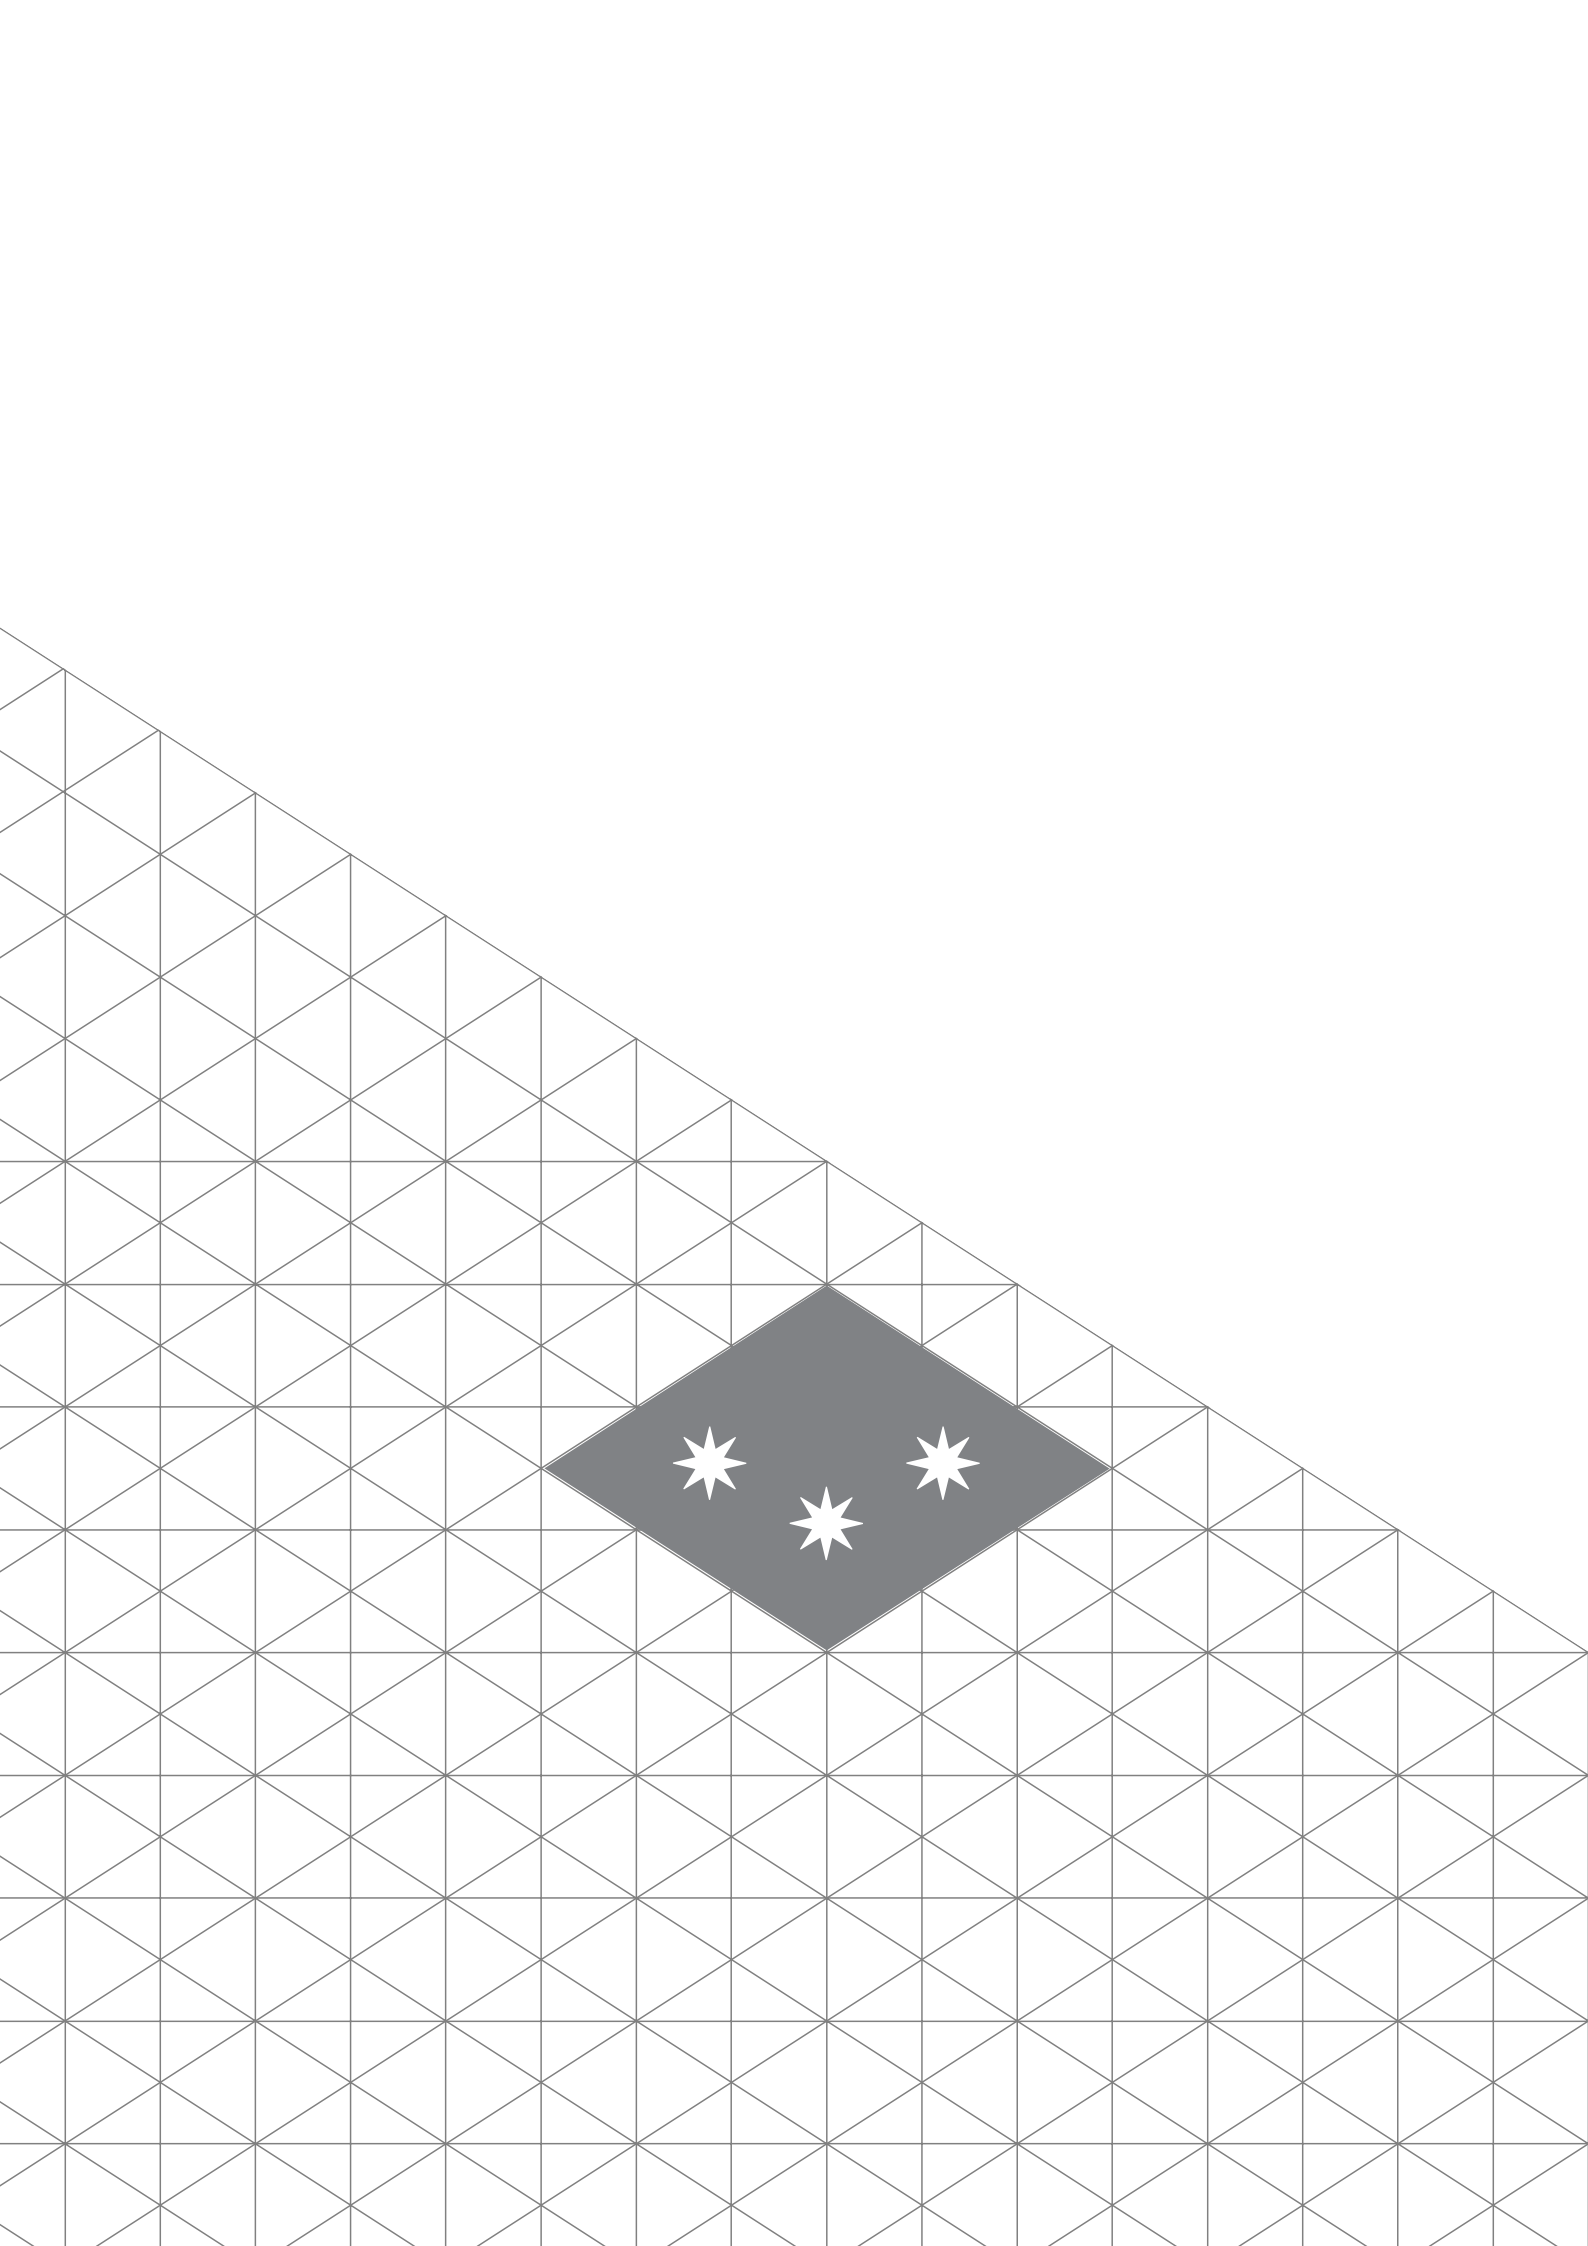

Website traffic in 2019 amounted to 62,043 unique users per month, which is 40% more than in a previous year.

Interest in the Rospatent official website was supported with the help of the official page on Facebook, containing interesting materials on the topic of patent law, publications on outstanding inventions, and answers to user questions. The number of page subscribers as of December 31, 2019 amounted to 3,575 people, which is 27% more than at the end of 2018; the number of “Likes” – 3137 (24% more) without additional costs for advertising and attracting subscribers. The total coverage of publications amounted to more than 260,000 users.

ANNEX 4 TO SECTION 4 OF THE REPORT

Table 4.1
Participation of the Russian Federation in International Treaties, administrated by WIPO

Title of the document	Entry into force in the Russian Federation
INDUSTRIAL PROPERTY	
Paris Convention for the Protection of Industrial Property	from July 1, 1965
Convention establishing the World Intellectual Property Organization	from April 26, 1970
Madrid Agreement Concerning the International Registration of Marks	from July 1, 1976
Protocol to the Madrid Agreement Concerning the International Registration of Marks	from June 10, 1997
Patent Cooperation Treaty (PCT)	from March 29, 1978
Trademark Law Treaty (TLT)	from May 11, 1998
Budapest Treaty on the International Recognition of the Deposit of Microorganisms for the Purposes of Patent Procedure	from April 22, 1981
Strasbourg Agreement Concerning the International Patent Classification	from October 3, 1976
Nice Agreement Concerning the International Classification of Goods and Services for the Purposes of Registration of Marks	from July 26, 1971
Locarno Agreement Establishing an International Classification for Industrial Designs	from December 15, 1972
Nairobi Treaty on the Protection of the Olympic Symbol	from April 17, 1986
The International Union for the Protection of New Varieties of Plants (administered by WIPO in consort with the International Union for the Protection of New Varieties of Plants - UPOV)	from April 24, 1998
Patent Law Treaty (PLT)	from August 12, 2009
Singapore Treaty on the Law of Trademarks	from December 18, 2009
Geneva Act of the Hague Agreement Concerning International Registration of Industrial Designs	from February 28, 2018
COPYRIGHT AND RELATED RIGHTS	
Brussels Convention Relating to the Distribution of Programme-Carrying Signals Transmitted by Satellite	from January 20, 1989
Berne Convention for the Protection of Literary and Artistic Works	from March 13, 1995.
The Convention for the Protection of Producers of Phonograms Against Unauthorized Duplication of Their Phonograms	from March 13, 1995
Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations	from May 26, 2003
WIPO Copyright Agreement (WCT)	from February 5, 2009
WIPO Performances and Phonograms Treaty (WPPT)	from February 5, 2009
Beijing Treaty on Audiovisual Performances	from August 28, 2015
The Marrakesh Treaty on Facilitating Access for Blind People and Visually Impaired or Other Disabled Students of Printed Information to Published Works	from May 9, 2018

<https://www.wipo.int/treaties/ru/summary.jsp>

Out of the agreements administered by WIPO, the Russian Federation does not participate in two of them:

- * Vienna Agreement Establishing an International Classification of the Figurative Elements of Marks
- * Lisbon Agreement for the Protection of Appellations of Origin and their International Registration.

Table 4.2
Drafts of International Treaties under development

Title of the document	Date of acceptance	Date of ratification	Main principles
Draft of the Treaty for Protection of Broadcasting Organizations	–	–	It provides new legal authorities for broadcasting organizations, taking into consideration modern information and telecommunication systems, including the right to make it publicly available, to relay broadcasts by any means, including broadcasting again, wire relaying and relaying over computer networks, and the possibility of broadcasting signal, as well as obligations regarding technical measures and rights management information
Drafts of International Treaties for Protection of genetic resources, traditional knowledge and traditional cultural expressions / expressions of folklore	–	–	The work is underway to seek protection for traditional knowledge and traditional cultural expressions/folklore expressions, genetic resources, and traditional knowledge, related to the genetic resources within the framework of the existing system of intellectual property.
Draft of International Legal Document on the Law and Practice in the area of Industrial Designs, and the Regulations to it	–	–	It provides standards which should be established in national laws in regard to procedures for industrial designs registration

Table 4.3
International applications received by Rospatent in order to conduct an international PCT search

Receiving Office	A number of applications received in 2019 (2018)	Receiving Office	A number of applications received in 2019 (2018)
USA	2677 (2897)	The Republic of Bulgaria	7 (16)
Rospatent	1016 (883)	the Republic of Azerbaijan	10 (15)
WIPO International Bureau	127 (100)	The Republic of Kazakhstan	24 (14)
Ukraine	37 (71)	Romania	11 (9)
The Republic of Belarus	13 (18)	Eurasian Patent Office	8 (7)
The Republic of Moldova	4 (5)	The Kingdom of Saudi Arabia	4 (3)

Table 4.4
Patent search examination procedure

Indicators	2015	2016	2017	2018	2019
Number of international applications with prepared report	2447	2903	3898	3924	3958
Number of international applications with prepared preliminary examination report	75	65	60	54	57
Number of applications with prepared additional international search report	61	13	2	5	–
Number of prepared International-type Search Reports:					
upon the request of CIS countries	4	–	–	5	9
upon the request of EAPO	731	606	642	663	583
upon the request of TPI	572	753	1008	174	2

Table 4.5
Indicators of Rospatent as the Receiving Office in accordance with the PCT system

Indicators	2015	2016	2017	2018	2019
Number of Received International Applications	950	996	1142	1077	1310
Number of International Applications filed through ePCT system	–	85	131	171	264

Table 4.6
Rospatent involvement in PPH Project

Indicators	2015	2016	2017	2018	2019
Number of PPH applications received by Rospatent	417	484	771	1508	1193

Table 4.7
Requests for accelerating the documents management under the PPH Program with the use of National and International PCT work product

Indicators	2015	2016	2017	2018	2019
Number of PPH Applications with the use of National Work Product	288	318	515	1165	911
vs previous year (%)	193%	110%	162%	226%	78%
Number of PPH Applications with the use of International Work Product	129	166	256	343	282
vs previous year (%)	258%	129%	154%	134%	82%

ANNEX 5 TO SECTION 5 OF THE REPORT

Table 5.1

Data on the number of publications on the objects for IP rights protection

Published	2015	2016	2017	2018	2019
Applications for inventions	25573	20283	24961	18734	15897
Patents for inventions	34712	33537	34255	35775	34008
Previously not published copyright certificates and patents for inventions	153	436	-	77	3
Patents for utility models	9014	8876	8774	9868	8848
Patents for industrial design	5493	4460	5110	6334	5420
Applications for trademarks and appellations of origin	44265	51827	55417	57371	67398
Trademarks	30573	39814	41554	49604	50076
Appellations of origin	16	7	9	13	49
The right to use the appellation of origin	33	26	28	32	73
Registrations of computer programs	13410	14218	15000	16836	17496
Registrations of databases	1804	1747	1579	2138	2525
Registrations of integrated circuit topographies	139	178	207	241	254
Total:	165185	175409	186894	197023	202047*

* As of December 27, 2019

Table 5.2

Dissemination of FIPS publications based on the Rospatent official information in 2019

Name of issue	Number of sets
Bulletin "Inventions. Utility Models" on CD / DVD and FTP	79
Bulletin "Trademarks, Service Marks and Appellations of Origin" on CD / DVD and FTP	20
Bulletin "Industrial Designs" on CD / DVD and FTP	30
Bulletin of "Computer programs. Databases. Integrated Circuit Topographies" on CD / DVD and FTP	17
Retrospective annual sets of descriptions of inventions for the period from 1924 to 2018 on DVD / USB flash drive and FTP	16
Sets of descriptions of utility models to the security documents for the period from 1994 to 2018 on DVD	13
Sets of "Industrial Designs" for 1993–2018 on DVD / USB flash drive and FTP	5
Sets of "Trademarks" for 1991–2018 on DVD / USB flash drive and FTP	9
Reference search apparatus to the descriptions of inventions and title pages descriptions of utility models for the period from 1994 to 2019 on DVD and FTP	240

Table 5.3

Number of subscribers of FIPS publications based on the Rospatent official information for the period 2015 – 2019

Countries	Number of subscribers				
	2015	2016	2017	2018	2019
The Russian Federation	341	327	321	251	207
CIS Countries	6	10	9	10	9
Foreign Countries	10	10	12	12	12
Total:	357	347	342	273	228

Table 5.4

Distribution of subscribers of FIPS publications based on the Rospatent official information, depending on activity character in the Russian Federation for the period 2015 – 2019

Category of subscribers	Number of subscribers									
	2015		2016		2017		2018		2019	
	sub- scribers	in %	sub- scribers	in %	sub- scribers	in %	sub- scribers	in %	sub- scribers	in %
Scientific organizations	52	15,2	50	15,3	50	15,6	34	13,5	24	11,6
Scientific production and industrial enterprises	63	18,5	60	18,3	63	19,7	40	15,9	32	15,5
Educational institutions	10	3,0	10	3,1	10	3,1	6	2,4	4	1,9
Territorial Centers CSTI, Regional Libraries, TISCs	160	46,9	168	51,4	180	56,1	154	61,4	136	65,7
Patent Offices, Ministries	1	0,3	1	0,3	1	0,3	1	0,4	1	0,5
Law firms, patent attorneys and individuals	12	3,5	13	4,0	11	3,4	7	2,8	4	1,9
Commercial organizations	38	11,1	22	6,7	3	0,9	4	1,6	4	1,9
Other	5	1,5	3	0,9	3	0,9	5	2,0	2	1,0
Total:	341	100,0	327	100,0	321	100,0	251	100,0	207	100,0

Table 5.5

Number of subscribers of the FIPS publications, based on the official information of Rospatent, distributed into federal districts of the Russian Federation for the period 2015–2019

Federal districts of the Russian Federation	Number of subscribers				
	2015	2016	2017	2018	2019
Central	133	132	130	93	80
Northwestern	26	26	25	17	14
Southern	20	21	21	15	12
North Caucasian	7	7	7	5	4
Volga	81	79	77	67	54
Ural	25	22	21	18	15
Siberian	28	24	24	22	18
Far Eastern	21	16	16	14	10
Total:	341	327	321	251	207

Table 5.6
International Patent Documentation Exchange

Indicators of International Patent Documentation Exchange	2015	2016	2017	2018	2019
Foreign patent documents received for the SPC in electronic form (CD, DVD, FTP).	2757,3	2883,6	3053,5	5836,8*	6249,7*
Placed on the FTP-server of domestic patent documents for foreign patent offices, number of placements **	3624	3624	3624	3624	3624

* A significant increase is associated with an increase in the receipt of patent documentation from China.

** The FTP server contains copies of the official bulletins of Rospatent, the number of issues of bulletins and countries of exchange for the years 2015-2019.

Table 5.7
SPC structure

Number of documents stored in patent collection	2015	2016	2017	2018	2019
Total,	3016,9	2993,4	3166,0	6060,8	6582,9
including:					
national	259,6	109,8	112,5	224,0*	333,2*
foreign	2757,3	2883,6	3053,5	5836,8**	6249,7**

* Since 2018, applications for all types of carriers and an agreement on results of intellectual activity and means of individualization are taken into account as a part of the SPC.

** A significant increase is associated with an increase in the receipt of patent documentation from China.

Table 5.8
Indicators of library information service of the Library Department, VPTB FIPS

Quantity	2015	2016	2017	2018	2019
Visits	86,1	86,1	86,1	189,9	220,4*
Total documents issued:	31416,4	31417,1	31422,6	31424,5	31425,4
including:					
Paper copies	1949,9	1769,9	1511,0	992,4**	1084,7**
Electronic carriers	29463	29644,6	29910,7	30426,3	30329,8
microcarriers	3,5	2,6	0,9	5,8	10,9***
References and recommendations provided	255,3	240,7	346,5	451,0	460,8
Issued copies of patent documents and other materials for library users	159,6	144,3	91,0	13,1****	18,4****

* Since 2018, the indicator includes statistics on requests to information products on the FIPS website (136,777 requests for 2019).

** The decrease in the indicator is associated with a decrease in views of documents on paper and an increase in views of documentation in the FIPS database

*** The decrease in the indicator is associated with the termination of copying materials of applications by the Library Department in accordance with the regulatory documents of FIPS.

**** The decrease in the indicator is associated with the termination of copying materials of applications by the Patent Library in accordance with the regulatory documents of FIPS.

Table 5.9

User requests to the section of the Department “Russian Patent and Technical Library” (VPTB), posted on the website of FIPS

Indicators	2015	2016	2017	2018	2019
Number of requests	134,7	135,6	105,0	105,1	105,8
Number of viewed pages	243,6	1452,9*	1378,0*	1375,6*	1377,0*

* Since 2016, statistics on the use of Library materials on the FIPS website is provided according to the Yandex.Metrica counter. In this regard, the data differs from those provided earlier, the difference is due to different counting algorithms.

Table 5.10

User requests to the section “Electronic catalogue of patent and legal documents”

Indicators	2015	2016	2017	2018	2019
Number of requests	22,4	24,1	19,2	19,0	30,9
Number of viewed documents	104,5	116,5	71,5	109,9	239,7*

* Since 2019, the statistics on the use of electronic catalogue on the FIPS website is provided in accordance with the Yandex.Metrica counter. Instead of the indicator “number of viewed documents” the indicator “number of requests” is taken into account.

Legal protection of an information product (IB Group)	9	05.12.2019–06.12.2019
Recommendations on managing the rights on the results of intellectual activity (JSC Chepetskiy Mechanical Plant)	26	09.12.2019–13.12.2019
Preparation and examination of an application for objects for intellectual property rights protection (inventions, utility models, industrial designs, trademarks) by sectors (JSC Chepetskiy Mechanical Plant)	25	09.12.2019–13.12.2020
Total:	411	

ANNEX 7 TO SECTION 8 OF THE REPORT

Table 7.1

Federal budget revenues of the Russian Federation, administered by the Federal Service for Intellectual Property

Indicators	Years				
	2015	2016	2017	2018	2019 (preliminary data)
Finances from the payment of state, patent and other fees and other income, RUB, in thousand*	5 137 403,6	5 066 725,4	5 210 682,4	7 097 269,4	7 679 098,1
Finances received from the WIPO IB, thousand Swiss francs	3 090,3	3 315,8	2 930,9	3 539,8	3 542,2

* The amount includes the ruble equivalent of finances received from WIPO MB

Table 7.2

The cost structure of Rospatent

	2015 (RUB000's)	2016 (RUB000's)	2017 (RUB000's)	2018 (RUB000's) (refined data)	2019 (RUB000's) (preliminary data)
Remuneration of employees	1 568 825,5	1 491 485,5	1 654 704,4	1 982 299,1	2 137 184,0
General and administrative expenses	367 900,3	366 817,3	359 695,8	387 075,1	586 633,0
Publication of patent documentation	14 738,2	11 607,7	11 276,2	14 067,1	17 413,2
Investments in improving the basic information and technological processes, technical and software support for these processes	134 989,7	148 212,2	135 297,7	702 858,3	547 780,9
Other capital expenditure	25 720,9	12 395,8	15 290,2	26 593,3	43 379,5
International activity	41 703,1	43 181,0	47 785,4	53 340,7	55 060,2
Training and raising of qualification of specialists in the field of intellectual property protection	58 514,9	43 513,7	36 975,5	41 370,6	43 579,9
Transfer of insurance payments to state extra-budgetary funds for state welfare activities of citizens	431 626,6	416 669,9	464 453,8	545 831,5	588 171,0
Total:	2 644 019,2	2 533 883,1	2 725 479,0	3 753 435,7	4 019 201,7

Table 7.3

Data on staff composition of Rospatent and Federal state institutions under its jurisdiction as of 31.12.2019

Indicators	FAPRID	FIPS	RGAIS	Rospatent
Actual number of staff as of 31.12.2019	68*	2143 (key staff 2113 + external part-timers 30)	122*	81
- number of men	34	568	44	38
- number of women	34	1575	78	43
Occupational life:				
- up to 1 year	2	56*	10	4
- from 1 year to 5 years	5	242*	17	16
- from 5 years to 10 years	9	236*	19	15
- from 10 years to 15 years	12	293*	25	12
- over 15 years	40	1286*	51	34
Accumulated period of work in the Rospatent system:				
- up to 1 year	19	172*	28	6
- from 1 year to 5 years	10	398*	35	38
- from 5 years to 10 years	13	320*	23	15
- from 10 years to 15 years	13	326*	14	8
- over 15 years	13	897*	22	14
Public service period:				
- up to 1 year	2		2	7
- from 1 year to 5 years	3		1	25
- from 5 years to 10 years	2		3	12
- from 10 years to 15 years	2		2	12
- over 15 years	5		1	25
Have higher educational attainment, including	60	1679	109	79
- in the humanities	37	740	102	67
- technical	16	939	11	12
Have 2 and more higher educational attainment	7	96	13	14
Academic degree, including	-	82	46	5
- Candidate of Sciences	-	77	33	5
- Doctor of Sciences	-	5	13	-
Have academic status, including	-	8	32	-
- professor	-	1	12	-
- assistant professor	-	4	20	-
- senior scientist researcher	-	3		-
Have incomplete higher education	1	26	9	-
Have vocational secondary education	7	168	4	2

* excluding employees working on conditions of external secondary employment

Annual official edition of The
Federal Service for Intellectual
Property (Rospatent).

The report contains statistical
and analytical materials, reflecting
performance of Rospatent and its
subordinates organizations in 2019.

Signed on print
182 pages
Format 210 × 297 mm
Order 358
Circulation ... copies.
